Dealers find it profitable to carry the Lawson line in stock, because it is more often specified by architects and contractors.

The Lawson "Nu" Jamb spring hinge requires no hanging strip.

It fastens directly to the jamb and can be applied easily and quickly. This makes it less expensive. It also gives the door far more solid support.

With frictionless bearings and 24 per cent more coils, it wears longer and gives the door an easy swinging action.

Dealers not carrying the Lawson line should write their jobber for prices.

ALLITH-PROUTY

Your customers want this style of space-saving door. Ideal for the garage where every inch of space is needed. Listed in catalogs 90 and 91. **Write for them.**

Means Profits

Your customers always find satisfaction in **Allith-Prouty** hardware, and order again. You can supply every demand for sliding doors for garages, barns, sheds or dwellings from the complete **Allith-Prouty** line.

Hardware merchants whose constant effort is to fill each customer's wants in the way that will get and keep that customer's goodwill will sell **Allith-Prouty** hardware. They know from long experience that **Allith-Prouty** goods are sure to get and hold business.

The frame of these hangers is tough malleable iron that cannot be damaged by any abuse received in service. Wheels are machined to fit curve of track for least friction and maximum wear. Guide rollers prevent jams and binding. Roller bearings make these hangers operate so easily that they literally "move at a touch." Hangers can be adjusted to the smallest fraction of an inch, assuring tight joints always.

Get an **Allith-Prouty** Catalog 90 to prepare yourself for the business that will be done this spring. Find out about the help we give hardware dealers. **Ask today.**

Cheaper Because They are Better

As the manufacturers of Grinnell Automatic Sprinkler Systems, we are one of the largest users of Cast Iron Pipe Fittings in America.

So we decided to make our own and make them better than those we could buy. Then we put them on the market, and they've made a big hit.

GRINNELL FITTINGS SAVE YOU MONEY

Grinnell Perfect Fittings save time and labor. They make better jobs that please your customers and help your trade.

They are strictly quality fittings. Every piece is rigidly inspected; and any that are not absolutely up to standard are thrown out. Nothing but the best is good enough for us—and, therefore, for you and your trade.

COUNT ON OUR BIG STOCK OF PIPE AND FITTINGS

We carry one of the largest stocks on the Pacific Coast and can make quick deliveries. We also carry a full line of National Tube Pipe, which we cut and thread to your sketch.

Weed Tire Chains for Passenger Cars

Weed Tire Chains for Trucks

THE HONOR OF THE ACCO FAMILY

Weed Chains for Motor Cars!
Anchor Chains for Ships!
Chains for Railroads!

Devices that make travel safe on land and sea, that can be absolutely depended upon to protect human life, are typical of the nature and quality of Acco products.

The workers who make up the Acco family know they are doing more than making commodities merely to be sold.

They know that it is their work that holds millions of motor cars and trucks to slippery roads.

It is their work which enables mighty ships to ride safely at anchor, whether in harbor or helpless on a lee shore.

It is their work which makes possible the safe operation of thousands of railroad trains.

This gives the work of the Acco family honorable and distinctive responsibility which is reflected in every link of every Acco product—"From Plumbers' Safety Chain to Ships' Anchor Chain."

In the Acco family, loyalty to the work itself is rated above everything.

This is true of every worker whether the job is directing all of the numerous plants, or operating a 2,000,000 pound tester, or a typewriter.

The honor of the Acco family is in the hands of each member of it, even to the youngest worker.

These are the reasons why it is possible to say not only that "Every Weed is Guaranteed" but that every link in every chain made by the American Chain Company will hold for the purpose intended.

The big ACCO Line includes chains for every purpose—from Plumbers' Safety Chain to Ships' Anchor Chain—all Styles, Sizes and Finishes.

Doors were made to close

—and to open, too. But who wants a door standing open all the time?

Right in your community there are hundreds, perhaps thousands, who are sick and tired of the insistence with which doors stand ajar. They would welcome a Sargent Noiseless Door Closer.

Take the average home. The back stair door, bath-room door, closet or storm door—all should be kept closed. Office buildings, public and private institutions all offer a big potential market for Sargent Noiseless Door Closers.

Sargent Door Closers act quickly, positively and noiselessly. They are simple in construction, easily adjusted and give extra long service. There are sizes for both heavy and light doors.

For the convenience of your customers and to save you the trouble of explaining, we pack with each Sargent Noiseless Door Closer a blue print, explaining exactly how to apply and adjust them.

Sargent Locks and Hardware

To protect and beautify the homes and other buildings going up in your community suggest Sargent Locks and Hardware. They have the solid quality and workmanlike finish that mean long years of satisfactory service.

The Sargent Book of Designs shows the different patterns. It will be sent at your request to the prospective builders in your selling territory.

A Strong Wire Staple -- and a Felt Washer

**--Little Things, Yet As Here
Applied They Lengthen Life
And Increase Usefulness
Of Collar Pads**

Pat. in U.S. Dec. 1, 1914
Pat. in Canada Apr. 6, 1915

New Patented Hook Attachment

A strong wire staple reinforced by felt washer firmly grips hook to body of pad even though cover has been weakened by sweat and long usage. This lengthens life of pad. It is the greatest improvement since we invented the hook. *Used on all our Hook Pads and only on pads made by us.*

Stuffed Collar Pads

are the best safeguard against shoulders of horse being chafed, galled and bruised by collar. They excel the unstuffed kinds which lack the soft, pliable, cushion-like and absorbent features possessed by pads containing our specially prepared composite stuffing.

Low in Price---Long Lasting---Well Advertised

Our sixth campaign of advertising direct to users, through the medium of leading agricultural publications, is on a more extensive scale this year than any previous one. This serves to further the interest of dealers and jobbers.

Dealers are requested to write us for a supply of new books concerning care of horses and containing many valuable emergency horse remedies. Every horse owner will want a copy. Sent Free upon request.

TONCAN METAL

Resists Corrosion

"Isn't there something better than ordinary sheet metal?"

Ever have a customer ask you that? He's tried ordinary sheet metal and found it good while it lasted.

Now he wants sheet metal but he wants "something better" and you can give it to him. Just say without hesitation

"THERE IS—IT'S CALLED

TONCAN METAL

Its use is true economy, for it costs much less per year of service than ordinary metal sheet.

It can be used for every sheet metal service from ridge roll to down spout, from roofing and siding to culverts.

And it has proven its worth in thousands of structures."

Are there too many lines to know about?

HUNDREDS of people go into auction rooms every day and come away with things they never intended to buy.

As a hardware dealer you necessarily have to carry a great many lines of goods and your natural thought is that you carry too many to pick out the special advantages of any particular one.

The auctioneer has also "many lines" but he manages to seize on the chief selling point or advantage of each, and so concentrates the attention of his buyers on the advantages

of the particular item he is selling at the time, that he "creates a demand" in their minds, with his enthusiasm.

You will find that if you take one of the **GTD** line of tools such as the "Gun" Tap with its obvious advantages and instill its superior qualities in the minds of your salesmen and make them "enthusiasts," your store will soon be showing gross sales and "turn-over" extraordinary for a supply house and be known to local manufacturers as "The House of Specialty Tools."

The Greatest Galvanizing Discovery of the Age

Exclusively Developed by the
American Steel & Wire Company

A new and decided advance in the art of galvanizing wire, resulting in a heavier coat of more lasting zinc that stays on. Either Bessemer or open Hearth Steel. Big wires—more steel per rod—mean longer life and greater strength. Elastic hinged joints—mechanically joined, the only true and enduring way to unite a fabric without injuring the metal. We also put this wire into

Banner Poultry Fence brings big and quick profits to dealers, and great satisfaction to customers.

Banner Poultry Fence is a true woven wire fence and not a netting. Larger wires without increased cost. It is made of 15 and 17 gage wires, instead of 19 or 20 gage wires, as used in old-style fabrics, and has 22 wires in 4-foot height, 16 wires in 2-foot height, making a poultry fence of minimum close space and immense strength.

Banner Poultry Fence Wire is hard, stiff and springy. It carries a coat of zinc put on by the latest method—a discovery, a real improvement in galvanizing—a zinc covering more lasting; it stays on.

Banner Poultry Fence costs about the same as poultry netting in the principal selling sizes, despite the use of heavier wires. The close spaced wires are at the bottom where needed, with gradually increased space at the top, where close spacing is not necessary. Graduated spacing means a

saving which is put into larger wires without increased cost to dealer or consumer.

Banner Poultry Fence saves in cost of erection, because it requires fewer posts, while top and bottom rails are not needed to keep the fence in shape.

Banner Fence makes a neat construction, and forever does away with the ragged, saggy appearance of old-style fabrics.

Help Your Customers Get a 100% Wool Crop

A Stewart Shearing Machine is a money maker for both you and the sheep owner. Machine shearing gets more wool, and the wool is longer and more marketable. Every machine sale nets YOU a nice profit.

There has been a great revival in sheep raising, and wool is worth real money these days. Machine sheared wool grades higher and brings top prices.

Hand blade shearing wastes money. A Stewart Shearing Machine gets 15 per cent more wool after the most expert hand shearer has done his best. This is real money, and the saving on even a small flock is considerable.

Stewart Shearing Machines not only get better and longer wool, but get it quicker and easier. The sheep are not scarred, and a smooth, even stubble is left for next year's growth.

The Stewart No. 9 Ball Bearing Shearing Machine is profitable for only a few head, and a big time saver and money maker for flocks up to 300.

Put Stewart Shearing Machines in Your Window

The Stewart Gets ALL the Wool, in Marketable Condition.

Let them know you have Stewart Shearing Machines in stock and you'll get the business in your community.

A good stock of Stewart No. 9 Ball Bearing Shearing Machines is but a small investment, with quick turnover and big profits.

YOU can get the shearing machine business in your community. Ask us for hangers, folders and cuts to help sales. Write for Catalog No. 68 if you have inquiries for power machines.

*The business is all around you.
Every sheep owner a possible customer.
Don't delay, but order NOW from your jobber.*

CHICAGO FLEXIBLE SHAFT COMPANY

5604 Roosevelt Road, Chicago

To cut down the cost per cut

250% More Work

In power hack sawing, compound acts more as a coolant than as a lubricant. Cutting heats the blade, and the purpose of the compound is to prevent the temper of the blade being drawn.

A few drops of oil or a scanty flow of compound simply tends to hold the chips in the cut and is frequently responsible for broken blades. Whatever you are using for a coolant, compound, or water, see to it that the work is flooded except when cutting iron castings. If you use compound, keep it thin and well agitated. Actual tests have proven that the use of compound will increase the amount of work accomplished by 250 per cent.

Get a copy of the Starrett Hack Saw Chart **BF** pick the right blade, put on the weight, see to it your S. P. M. are right — and watch your cutting cost decrease.

Specifications

Takes any standard .380 rimless pistol cartridge. Capacity, 7 cartridges in magazine with one additional in chamber. Hammerless with side ejection. Three separate safety devices. Length 6 $\frac{1}{2}$ inches, width $\frac{1}{10}$ inch. Weight 21 ounces. Hard rubber stocks. Dull black finish. Made only in one caliber, one style, one finish.

There's a Real Market for this Pistol

Remington not only succeeds in giving the sportsman—your customer—what he wants in firearms and ammunition. It has been a Remington policy to anticipate the needs of the consumer.

For some time sportsmen have been asking Remington for an automatic pistol which would meet all the requirements of protection, touring and hunting—a general purpose arm—a pistol which would take the same dominating position among pistols that Remington shotguns and rifles have occupied among the larger arms.

The sportsman wanted a light, compact arm of low recoil built to shoot straight and hard. In producing the new .380, Remington has gone further than that. This Model 51 automatic pistol is **COMPLETELY SAFE**—made so by an extra safety device which locks the sear and hammer and makes impossible the accidental discharge of a cartridge left in the chamber when the magazine is removed.

The Model 51 is a good seller because it possesses improvements which the sportsman has needed and which he is quick to recognize once he sees the arm. Some of these pistols should be in your show case.

Some High Grade Standard Rubber Tips and Bumpers

That ought to be in your stock

Rubber Tips and Bumpers are in big demand these days—people are beginning to realize the great advantages of their use.

But all tips are not good tips—and a bad tip prevents further sales—further business.

It is up to you, to stock the best and most varied line. Inspect some of the illustrations—there's a tip in our line for every practical tip purpose. You had better investigate—for the sake of good business.

Write today — ask for catalog, prices and terms.

THE ELASTIC TIP COMPANY

370 Atlantic Avenue.
Boston, Mass., U.S.A.

Features

DESIGN: Straight, sturdy lines that make the stove look as if built for service. Handsome in the extreme. A style that makes any woman proud to have it in her kitchen.

COLOR: Nesco Grey—just enough of greenish hue to give character. Beautiful, clean, attractive.

STOVE HOLES: Set well to the front of stove, so as to leave more shelf room at back.

BURNERS: Here's the heart of the stove. Perfect burning and perfect operation are necessary.

A blue flame, containing an inner flame, gives intense heat without smoke. Air comes in through perforated tubes and within the center of the inside tube forms gas as it is heated and rises in flame.

The burner bowl is lowered into the oil column and the oil is fed to the flame thru a stationary non-burnable wick. To extinguish, the burner bowl is simply raised up out of the oil. What oil is left in the wick burns out.

TOGGLE JOINT: The raising and lowering is done by a toggle joint, which cannot get out of order and which stays exactly where it is put. The flame cannot flare up or go out, because the burner has moved.

BOOKWEAVE WICK: A woven non-burnable wick sets stationary in the burner bowl. It does not move in the bowl. It simply serves to feed oil to the flame. It can be wiped off to clean—can be reversed and is long lasting.

NO SMOKE: As the burner bowl containing the wick is raised up out of the oil to extinguish and the oil is burned out of wick, when left standing there can be no seepage of oil onto the chimney cylinders. Such accumulation must be burned off when lighting and this causes smoke and smell. Smoke is also caused by turning the wick too high. Not so here. A faster feed gives a less economical flame, but cannot produce smoke. Chimneys are always dry—hence no smoke.

EASY TO CLEAN: All parts are easy to get at and the supply pipe line is easily opened and flushed.

Truly the Nesco Perfect Oil Cook Stove is the housewife's pride and wonder, and the retailer's profit making, quick seller.

MUELLER

The "Big 3"

PIPELESS FURNACE

Why called the "Big 3"? Because three big and exclusive construction features are mainly responsible for its heating efficiency and fuel economy. Three features have established the Mueller's superiority.

The "BIG 3" Are Sales Clinchers and Business Builders for You

BURNS ANY FUEL — ECONOMICALLY

The Mueller Pipeless burns hard or soft coal, coke, wood, lignite or gas. Saves from a third to a half on any fuel used.

It is guaranteed to heat every room, upstairs and down, comfortably. Requires attention but once or twice daily. Keeps air in the rooms moist and clean

You get in the "Big 3" features of construction, basic selling arguments not found in any other pipeless furnace. Rightly used they will bring you the very cream of the pipeless furnace business in your territory—will make you the dominant furnace dealer.

We have laid the groundwork for this big trade by extensive advertising in national and farm papers covering your territory. Home owners and home builders everywhere are being educated to the efficiency and economy of the Mueller, the "Big 3" Pipeless Furnace. Thousands of Muellers are installed in every section of the country.

You will want to know more about our plans, our co-operation and specially attractive dealer proposition. Write today for the Mueller Book and full details of our agency offer.

D.; Seattle, Wash.

A Few Baldwin Features

Provision Shelves.—All Baldwin Refrigerators are fitted with heavy tinned woven wire shelves. These are the best shelves made, permitting of free circulation of air and being strong and easily cleaned. They are double or retinned after making and do not rust.

Elastic Packing Around Edges of Doors and Lids.—In addition to the usual laps on doors the latter are provided with elastic packing around the edges, this in combination with our lever lock making them doubly air tight. The lids of our upright styles are also fitted with this exclusive ice saving feature not found in other makes.

Castors. — We use a first-class caster, with maple or lignum vitae wheels, varying in size according to weight of refrigerator. Its chief merit lies in the fact that it can be inserted and withdrawn from the socket, but will not drop out, the shaft being gripped at top by the steel socket.

Air Tight Waste Trap.—Our new inside trap is of brass, nickel-plated, and comes apart for cleaning. Being in the bottom of storage compartment, it is more easily reached than when underneath the refrigerator. Waste pipes are also removable for cleaning.

The Woman in the Hardware Store

No doubt you appreciate the value of feminine patronage. But many women still believe that a hardware store is an institution that takes care only of men's needs.

If your Silverware Department is up to date and attractive, it should serve to interest these doubters and introduce them to your store as a whole.

1847 ROGERS BROS.

SILVERWARE

is not only the best known silver plate, but it appeals to the woman who desires her silverware to harmonize with the furniture and other furnishings of her home.

INTERNATIONAL SILVER CO., Meriden, Conn.

UNIVERSAL

THE TRADE MARK KNOWN IN EVERY HOME

UNIVERSAL ALUMINUM WARE

UNIVERSAL Aluminum Ware is new in design—new in quality—concepts—new in sanitary features—new in selling possibilities.

Every utensil a strictly quality product.

A Few Features of "Universal" Betterness

Bodies of pots, pans and kettles are gracefully formed, seamless and leak-proof. No sharp angles, cracks or crevices to collect dirt, grease or grime. Extra large, extra strong close fitting Beads. Handles doubly braced for double strength—made of cold rolled steel, heavily tinned. Balls stand at any angle away from the heated vessel. Ears with straight edges easy to keep clean—made of cold rolled steel. Pure Aluminum spouts welded to bodies.

Because of the prestige all "Universal" products have with householders throughout the country "Universal" Aluminum Ware has met with instant popularity and no line which we have put on the market has had a more enthusiastic reception.

THE CENTRAL STAMPING COMPANY - NEW YORK

MAGNETIC CLOTH

The Most Complete Domestic Help Device Known

It instantly removes Grease, Burned Foods and all dirt from all kitchen ware. ALSO cleans Vegetables, New Potatoes, Sweet Potatoes, Carrots, Parsnips and such like. ALSO Tile work, Marble or Brown Stone Steps and many other things too numerous to mention. ALSO is used extensively for cleaning stained and greasy hands, for instance in machine shops, garages, etc.

These are the days of progress and efficiency. The woman in the kitchen is no longer satisfied with the old-fashioned, back-aching methods of cleaning greasy pots and pans; MAGNETIC CLOTH is now the active housemaid that saves time and labor and conserves sweetness of disposition. The kitchen sink of the modern housewife is no longer complete without a MAGNETIC CLOTH hanging on a hook.

The MAGNETIC CLOTH is as pliable as cloth, entirely as efficient as the best abrasive. Made to slip on the hand like a mitten. After using, rinse in warm water and hang up by the loop, to dry.

As a magic wonder this MAGNETIC CLOTH is demanded everywhere; its market is wide and insistent and it is a logical, inevitable profit-maker for the merchant who reads and heeds the mind of his trade.

Mirro Lasts Years and Years

Into every Mirro utensil is built long life and usefulness; long life, because of the superior rolling and stamping process by which it is made; usefulness, because of the extraordinary ingenuity with which it is designed.

This Mirro Aluminum Tea Kettle, for instance. A generation from now, it will be as cheerily active in the service of an appreciative mistress as it is today. Age will not shelve it, nor Time mar its beauty.

And from the standpoint of convenience, it is truly unusual. Note the ten splendid features of convenience—features you do not find in ordinary aluminum ware:

(1) The highly ebonized, sure-grip, detachable handle. ☆(2) Handle ears are welded on—an exclusive Mirro feature. (3) Spout also welded on—no loosening—no dirt-catching joint.

(4) Slotted ears permit handle to be shifted to any desired position without coming in contact with sides of kettle. ☆(5) Rivetless, no-burn, ebonized knob.

(6) Self-filling, easy-pouring spout. (7) Unusually wide base—quick heating and fuel saving. Also prevents flame from creeping up around sides.

(8) Famous Mirro finish. (9) Beautiful Colonial design. Also made in plain round style. ☆(10) Mirro trade-mark stamped into the bottom of every piece, and your guarantee of excellence throughout.

Back of every Mirro utensil is America's foremost manufacturer of aluminum ware, and more than a quarter of a century's experience in aluminum making. At better stores everywhere. Moderately priced.

Aluminum Goods Manufacturing Company, General Offices: Manitowoc, Wis., U. S. A.
Makers of Everything in Aluminum

MIRRO ALUMINUM

Reflects
Good Housekeeping

The above advertisement will appear (full-page size) in the May issues of four great magazines—Woman's Home Companion, Pictorial Review, Delineator and Designer. As advertising mediums, these combined publications are a great force, and strongly influence the purchases of American women. That Mirro advertising is widely read by these women-purchasers is evidenced in daily mounting Mirro sales.

Stanley Tools

Stanley Extension Bit Holder

Used in connection with a Bit Brace, it will extend the Bit, enabling the user to bore through walls, floors, etc., where the ordinary Bit will not reach.

The Socket in which the Bit rests and the Shank for its entire length are of one piece of steel.

Note how the shape of the socket conforms to the Shank of the

Bit. This form of construction, together with the improved Lock Nut, makes it impossible for the Bit to work loose while boring.

Any length Holder will follow up a $\frac{3}{8}$ -inch Bit. Heavily nickel plated and highly polished. Made in six different lengths.

SAVAGE

**The SAVAGE
JUNIOR RIFLE**

*.22 Calibre
Gun*

Specifications: 18-inch round barrel single-shot model. Shoots .22 short and long cartridges. Bolt action modeled after best military rifles. Genuine walnut stock steel buttplate. Bead front and adjustable rear sights.

IT is a rifle worthy of your careful attention for your 1920 season. Staunch and well made, of Savage Quality throughout, it has a strong appeal to youngster and seasoned rifleman as well. To the novice, it affords at a modest price, an opportunity to learn the lure of the firearm—to the hunter it is an indispensable item in his equipment for small game and for amusement around camp.

Remember it is bolt action, a miniature army rifle, simple as a monkey wrench, and unsurpassed in accuracy.

It is low in price—it will sell in large volume. Add it to your stock this year.

COLT'S

FIRE ARMS

First

in War in Peace

'... backed by the power, quickness, and accuracy of a Colt Automatic.'

In those hundreds of stirring accounts of bravery, where American soldiers single handed captured from six to a hundred German prisoners, the Colt Automatic Pistol was the weapon the Germans feared.

This is the gun that in 1919 shattered all previous target records for accuracy ever made by a hand gun of any model over a National Pistol Match course at the National Shoot at Caldwell, N. J.

Send for folder A-62 which describes how Lane, the great pistol expert, made a world's record with a Colt Automatic Pistol. As time goes on, it multiplies evidence to show the truth of the Colt slogan.

Teaching American Boys to Buy Good Tools

MANUAL training courses in our schools are teaching boys and young men how to do good work with tools.

These boys, as a result, are coming to appreciate good tools more than ever. They make up a class of tool-buyers that it is distinctly worth while to cultivate.

We are telling these young amateur carpenters and wood-workers about the quality of Disston Saws and Tools.

To do this, we are using the magazines to which they look for information on mechanical subjects—"Popular Mechanics," "Popular

Science Monthly," "Scientific American," and "Industrial Arts." We send the Disston message to more than three-quarters of a million readers of magazines of this kind. The exact number of subscribers is 781,067. These boys constitute by no means a small market for sales of quality saws and tools.

Telling this market the story of Disston Saws and Tools is another instance of our thorough cultivation of all classes of buyers to increase public demand for high-grade saws and tools.

Next month we will tell you how we reach another class of tool-buyers—the "handy man around the house."

Disston Saws and Tools are constantly advertised in magazines and agricultural publications with a total circulation of 8,497,008 copies each issue.

"Forstner" Brace and Machine Bits

For Fine Carpenter, Cabinet and Pattern Work

peditions than chisel, gouge, scroll-saw, or lathe tool combined, for screen work, scalloping, fancy scroll twist columns, newels, ribbon moulding and mortising, etc.

Manufactured by **THE PROGRESSIVE MFG. CO., Dept. "A," Torrington, Conn.**

Enquire of Your Hardware Jobbers, or Write Us Direct.

Supplied in Sets

Write for Catalogue

Specially Adapted for Hardwood Working

The Forstner Labor Saving Auger Bit, unlike other bits, is guided by its Circular Rim instead of its center; consequently it will bore any arc of a circle and can be guided in any direction regardless of grain or knots, leaving a true polished surface. It is preferable and more exact for core-boxes, fine and delicate patterns, veneers, etc.

Superior Casement Adjuster

For windows that open out
Operates without disturbing the screen

Superior Casement Adjuster is the most convenient to operate because all that is required to unlock and move the window is to simply move the handle; when you let go the handle the window is locked automatically.

Superior Casement Adjuster is the strongest because it locks on the rod fastened to the window and thus combines the strength of the two rods.

Superior Casement Adjuster holds the window firmly at any angle and does not allow the window to rattle.

WAGNER Door Hangers and Tracks

Quality hangers and tracks designed to overcome all the troubles and draw-backs of cheaply built hangers and tracks that are made merely to sell at a price. Wagner Hangers have roller-bearing wheels, tandem trolley with bumper on end to protect wheels, a very simple and practical cam vertical adjustment and other features that put them out of the ordinary class. Tracks are self-cleaning, bird-proof and much heavier than ordinary tracks. They please customers and build trade.

From Your Viewpoint

Do you remember the first catalog you ever saw, with those grotesque wood cut prints and ridiculously exaggerated descriptions—everything presented from the maker's standpoint? In those days service had not entered the mind of the manufacturer. He made his goods his way, and sold them for his own benefit.

What a contrast in impressions and frank presentation obtains in the Richards-Wilcox new catalog on

Distinctive Garage Door Hardware

Beginning with the front cover, handsomely displayed in full color, this catalog is built to accommodate the convenience of the person interested in garage door hardware.

Not a garage doorway condition is left unprovided for—not a personal taste overlooked.

Here are displayed hundreds of sets of distinctive fixtures for doors, which operate inside and outside of the doorway—suitable for every conceivable condition—and all so lucidly and completely compiled, so simply illustrated and so plainly detailed that the reader may select unerringly the exact set suited for his garage, his taste and his purse.

A copy of this beautiful book will be mailed to anyone interested in garage door hardware on request

SELL BUR-NOR HATCHETS

Cheaper
than a
Wooden
Handled
Hatchet

**They
Give
Service**

No. 160 SPECIAL PACKING

MADE IN 21 STYLES

The two principal disadvantages of wooden handled hatchets are broken handles and loose heads. BUR-NOR ALL STEEL HATCHETS overcome these disadvantages.

No broken handles. The steel hollow reinforced handle prevents that.

The heads can't loosen or come off because they are riveted fast under high pressure.

Here is the line of hatchets that command attention because they are sturdily made and GIVE SERVICE. Sold under guarantee.

Ask your jobber to supply you.

The Friend of Dealer and User

The simplicity, brilliance and economy of Coleman Quick-Lite lanterns and lamps have made friends for them all over the world. More than 15,000 dealers are enthusiastic sellers of Quick-Lites because they are so easily sold on merit, at good profit, and because they know their sale means satisfied customers.

The

Coleman Quick-Lite

"Most Brilliant Light in the World"

—makes and burns its own gas from common gasoline. No dirt, grease, smoke, soot or bother with wick-trimming or globe-washing. Light with matches. Both lantern and lamp operate on same principle. Favorite of more than one million users in the United States alone. Write nearest office for information. Some very attractive propositions for wide-awake dealers.

The COLEMAN LAMP COMPANY

Largest manufacturers of Portable Lamps in the world
WICHITA ST. PAUL TOLEDO DALLAS
LOS ANGELES CHICAGO

Easier Sales and More Profits

THE predominant features of Sturges Steel Churns are apparent on first examination. You don't have to "talk" this churn to sell it. It sells itself. It takes the eye of the churn buyer with its attractive outside finish in red and blue enamel and heavily tinned, smooth interior. No corners or crevices to retain dirt. Easy to clean and keep pure and sweet. Drawn steel barrel will not soak up and retain the moisture. No staves to warp. Lighter and easier to operate. Gives a lifetime of efficient service. Made in four sizes; you can meet the requirements of every churn buyer in your territory.

If you are not selling Sturges Steel Churns you are missing profits that should be yours. Write for more information about Sturges line and ask for Circular No. 35X.

Established 1863

"Highest Award (Medal of Honor) for FILES and R A S P S, Panama-Pacific International Exposition, San Francisco."

The Sharpening Depot

of your city might as well be located in your hardware store. You sell safety razor blades as well as knives and scissors. Why not get the \$5 to \$12 a day spent on sharpening these articles? You can do it and can increase your cutlery business if you install a

Hatfield Complete Sharpening Machine

No other machine sharpens blades so satisfactorily. The lateral motion gives a hair-splitting edge to any blade while an auxiliary attachment sharpens knives and scissors.

A dozen blades every five minutes with a 12 blade machine (illustrated here).

It's no particular town that brings results. Most every man shaves—most shavers use safety razors—millions of blades are sold every year in the United States—Thrifty demands that they be resharpened.

"Evidence" that you can get the business and money is yours for the asking.

AS LONG AS "MONEY TALKS" and QUALITY SELLS

there'll be satisfied users and new prospects for Gem Razors and Blades

Selling Safety Razors is a whole lot like selling real estate—you have to chase up your prospects and convince them that your product is right, all the way through. Shaving, like other personal matters, is something that many men permit to go along very unsatisfactorily, simply because they think it is a necessary evil that has been wished onto the male sex.

However, there isn't a man anywhere that isn't really interested in getting a better shave. He will listen to your shaving arguments, because he is interested in securing the greatest possible satisfaction and utility out of a razor. He wants, at the same time, to be economical, and get a razor whose upkeep is small, a blade with a long life of usefulness.

Such prospects are found everywhere. To sell them Gem Razors and Blades is easy, because there are millions who testify voluntarily that the GEM is their safety razor, because it leaves the smoothest face, that velvety and fresh after-feeding that men enjoy, and because Gem Razors are always easy to get, both from the standpoint of price and place.

And here's the thing that should interest you: You do make a good profit; you are protecting your own good will; you are building up a profitable accessory business. All you need to do is put the Gem Safety Razor on display and WATCH IT.

If you aren't selling as many Gems as there are prospects for your store, better stock up and take advantage of some deal price, and then follow up the live prospects—there are millions of them.

A Good Rope— Seaport Manila

MOST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

SEAPORT MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

GOODS SOLD TO THE TRADE ONLY

BOTTLES THAT ARE

LOCKPORT MILK BOTTLES THE HIGHEST QUALITY MILK BOTTLES MADE

"H" SHAPE**"X" SHAPE****"Z" SHAPE**

Clear, transparent glass. It costs thousands of extra dollars each year to follow the chemists' requirements so as to get and keep this snap and brilliancy of glass and so prevent your milk from looking dull and watery.

Observe the uniform thickness of the glass. Special automatic machinery makes these bottles equally strong at every point.

Observe the head. Its thickness and blow-resisting curves, which prevent chipping. Head seam is placed where it is least likely to be hit. The Lockport bottle is extra thick and strong, the glass is uniformly distributed. It is so formed as to resist the tendency to smash from rough handling which all milk bottles are bound to get.

Lockport cap seats are round and so constructed that they aid materially in capping.

Lockport bottle bottoms are smooth. No dirt catching grooves or crevices.

Ordinary milk bottles are often easily broken for no reason which the eye can detect.

A special annealing process prevents hidden strains and guarantees the **MOST NEARLY UNBREAKABLE MILK BOTTLE ON THE MARKET AT ANY PRICE.**

Test Lockport Quality Bottles against any other makes; or, better yet, order a sample shipment and note your **DECREASED BREAKAGE.**

New automatic machinery enables us to make Lockport bottles uniformly accurate in capacity. In this important respect they are unexcelled.

Note the beauty and design of the Lockport bottle—not squatty, not top heavy, but with a neck so shaped as to show a full, generous cream line, which adds to the salability of your milk.

New Ladd's Discount Book No. 3

A new and enlarged edition of this standard work, comprising the most comprehensive collection of discounts ever printed, as well as many other valuable computations for commercial purposes, is now ready, after months of preparation by the compiler and editor, William J. Ladd.

Is one of the greatest time and labor-saving productions of the age. The net of any amount at any discount can be obtained in a second. The calculations have all been carefully checked. No proving is necessary. It is invaluable for pricing and checking invoices, figuring inventory, making prices, figuring profit, etc. Note the equivalent discounts. Are they worth anything to you?

It contains more than 300,000 Computations including New Discounts and Combinations which have come into use within the last few years. Nearly 600 pages, all double indexed.

60, 10, 10, 7½ & 2½.

TIME TO ORDER FREEZERS

All of the three, **LIGHTNING**, **GEM** or **BLIZZARD**, have served the housewives of America for thirty years, and, like the cream they create, are in demand in all seasons.

They are built of the very best material and workmanship possible—their ingenious construction makes them easy to operate, quick freezing, and economical to both dealer and user.

The **Blizzard**, being simpler in construction and cheaper in price, makes it a good running mate with either the **Lightning** or **Gem**. They sell themselves and stay sold! No comebacks or complaints. This means easy, net profits for you.

SAFETY INTERLOCKING STOVE AND FURNACE PIPES

Fire
Preventing

Home
Protecting

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe. Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.

Send for Price List and Descriptive Statement.

 LOUISVILLE, KY.

There is a Peerless Dome Damper for every fireplace. Unique features of operation. Cannot get out of order. Blueprints furnished.

Assured Profits by Selling the

SIMPLEX IRONER

"THE BEST IRONER"

Comfort and ease at what is otherwise very tiring work is a unique feature enjoyed by women who use the Simplex Ironer. This is possible because of the extreme simplicity of the Simplex, with its wonderful automatic feed control.

Women to whom you sell a Simplex can sit down and iron. That is a big selling point which is attracting many profitable sales to Simplex dealers everywhere.

The household appliance department selling the Simplex can do so with the satisfaction of offering customers the leader in the field.

We co-operate in training your sales force in specialty selling. The SIMPLEX Sales Plan for dealers is far-reaching. It provides new practical suggestions for the building up of your entire Household Labor-Saving Appliance Department.

ALUMINUM "Real Solid"

ANNOUNCEMENT

The "REAL SOLID" LINE has been for 20 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

A New Line of "REAL SOLID WARE"

This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidity and Durability.

We have eliminated unnecessary expense of CAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

TRIMMINGS—Tinned Iron, using Double Coated Tinned Iron—The best on the market.

PROTECTED HANDLES—All Coffee and Tea Pots with handles, both curved and straight—bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

OUTSIDE FINISH—The Same HIGH CLASS polish as heretofore.

INSIDE FINISH—Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.

We have added 25 New Items, all practical. This makes the "REAL SOLID" Line the most complete on the market

Sells Best Because It Chops Best

There's a clearly defined reason why in almost every household where culinary skill is appreciated

"ENTERPRISE"

Meat-and-Food Chopper
Is held in highest esteem

It is because of their superior cutting mechanism. For fifty years the principle of the revolving, four-bladed steel knife and the perforated steel plate has been advertised.

Today, the "ENTERPRISE" is known, almost universally, as the one machine having the true slicing motion that chops, even the most tough and stringy meat, into tiny bits without tearing or mangleing it and without squeezing from it the nourishing juices.

It's this knowledge that your customers have of the "ENTERPRISE" that makes them so profitable for you to handle. They sell readily, requiring little argument on your part. And their unending usefulness assures a pleased and satisfied customer, whose good-will no far-sighted hardware merchant would care to lose. Write your jobber today.

CHATILLON CUTLERY

CARRY
CHATILLON

Ice Tools

Chatillon Ice Tools have been developed for handling ice easily. They are not tools from other lines, sold to ice dealers as ice tools. They are exclusively ice tools—the best we can make from the wide experience gained in our eighty-five years' experience as cutlery and scale makers.

The Chatillon Ice Balance, Pick, Cutter and tongs il-

lustrated are a few of the most popular models. There is a Chatillon Ice Tool for every ice purpose.

Made of good quality steel, of ample strength where strain is greatest, light as possible where there is no strain. Chatillon Ice Tools are balanced to permit long handling with least exertion.

Your jobber can tell you about the Chatillon Line of Ice Tools

It has taken 35 years of hard work to develop the organization making National Cash Registers

STARTING with two employees in one little room, The National Cash Register Company now has a making organization of over 7,000 people working in 21 big buildings.

It has taken 35 years to develop this tremendous organization.

Many obstacles had to be overcome in those years. Money, time, and energy were thrown into the enterprise by large-visioned men who believed that cash registers were a necessity in stores of all kinds.

Slowly, but surely the business grew. Building after building sprang up to house the expanding organization.

The National Cash Register factory of today is the result. It is built on a foundation of faith in the cash register as a business necessity. It is dedicated to the making of a labor-saving machine that helps merchants, clerks and customers.

Are You Getting Your Share?

Hardware World Dealers all over the country are "cashing in" on the new "Harvard" Ball Bearing Truck Caster. Are you one of them or have you overlooked this opportunity to increase your sales?

The new "Harvard" Ball Bearing Truck Caster is constructed of extra heavy gauge steel. The axle is also made of extra heavy steel. The wheel is cast iron. This caster is much lighter than ordinary iron casters yet is practically indestructible. It is unequalled for strength and dur-

ability. The large 5-16 inch ball bearings make them easy running and turning.

Our new "Harvard" Ball Bearing Thread Guard Caster shown below has proved a big seller to shoe factories and mills where lint and threads from the floor are apt to twist around the wheels and prevent free action. Their big feature is the steel guard which prevents this and their 7-32 inch ball bearings.

Every Hardware World dealer should have our descriptive circular No. 105 H. W., showing our complete line. Write for one.

FELTOLD

REGISTERED JULY 13th, 1919

The demand for the well-known *SCHENCK LINE* of CASTERS is *already created*. It is now only necessary to show them to sell them.

Because modern homes have polished or varnished hardwood floors, these Casters are made especially for hardwood floors. They roll silently—never leave the slightest mark nor injure the finest rugs or floor coverings.

"Feltoids" are the only Caster Wheels that are made with a hard body, yet with a soft silken tread.

The popular *Schenck Line* of "Feltoid" Casters is now made in all standard styles. They are so strong, so well constructed, so easy to put on and so easy "on everything" that customers prefer them to all other casters.

They not only sell readily and steadily, but they please everybody, help business and pay dealers a worth-while profit.

We have Specialized in Casters for 30 years.

THE SATURDAY EVENING POST

Explaining Public Confidence in Keen Kutter Tools

The reproduction of skilled workmen who use Keen Kutter tools, is particularly due to the fact that these tools represent more than fifty years of effort by master craftsmen.

In another way, these thorough tests of development of the most designed materials ever used in Keen Kutter by production.

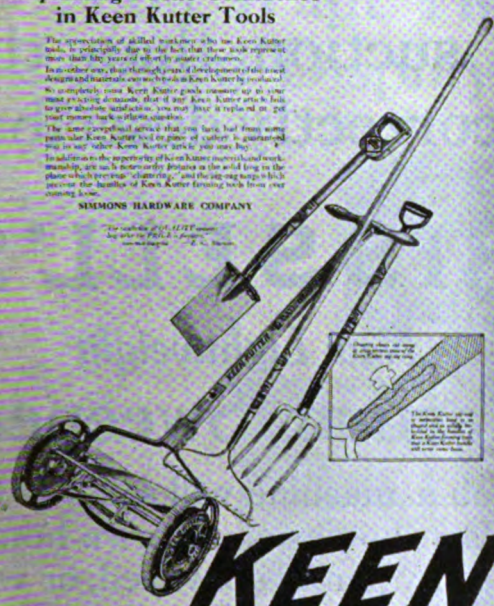

So completely does Keen Kutter goods measure up to the most exacting demands that if any Keen Kutter article fails to give absolute satisfaction, you may have it replaced or get your money back in full.

The same careful service that you have had from some particular Keen Kutter tool or piece of cutlery is guaranteed you in any other Keen Kutter article you may buy.

Insistence on the superiority of Keen Kutter materials and workmanship, are such a matter-of-fact as the solid iron in the plate which prevents "clattering," and the zig-zag shape which prevents the handles of Keen Kutter forcing back from over working knees.

SIMMONS HARDWARE COMPANY

The Keen Kutter #11 "KUTTER" is the most popular of all Keen Kutter tools.

KEEN

THE SATURDAY EVENING POST

KUTTER

Before Millions of People

Big, double page spreads in the Saturday Evening Post, such as that illustrated above, carry the story of Keen Kutter superiority to every class of tool and cutlery user in the United States, from the skilled mechanic to the housewife.

Dominating space in farm papers, which go into more than a million and a half homes, make an additional, special appeal to the farmer.

The skilled workman, too, is reached again—very intimately—through striking, full page Keen Kutter advertisements in every issue of his favorite paper—The Carpenter.

This intensive campaign is moving Keen Kutter goods even faster than usual. Tie up to the big selling effort and get your share of the profits.

Put the Saturday Evening Post pages in your window with special Keen Kutter displays—make yours the Keen Kutter store in your city.

SIMMONS HARDWARE COMPANY

Do You Want This New, Bright Spring Colored Display for Your Window?

IT'S FREE WITH BISSELL SWEEPERS

BISSELL'S "BLUEBIRD" DISPLAY

This new Spring Display is as pretty, as cheery and as attractive as our "Peerless" display of last fall was imposing. It will surely make a bright, attention-compelling spot of a merchandise window, after the grayness of winter. It will arouse visions of Spring, with thoughts of home refitting and renovating. It will handsomely tone up a window of home furnishings, home labor saving utilities, paints, etc.

The Display consists of a three panel background piece, 26 inches high by 42 inches wide, a top panel, 15 by 26 inches, to attach to a sweeper handle, and suspended from this top panel by cords is a cutout of a little girl in a swing. The element of motion so valuable in a window display can be secured by concealing an electric fan behind a piece of merchandise a little distance in front of the display, so as to keep the girl aswing. The display is beautifully lithographed in eight colors on ten ply cardboard.

The "Bluebird" Display is offered during the Spring Season with factory shipments of one dozen or more Bissell carpet sweepers, vacuum sweepers or assorted.

NO EDISON IF AN EIGHT-HOUR DAY WAS THEN IN VOGUE

Mr. Edison, the world's greatest inventor, was with difficulty persuaded to take a half day off from his work, that he, or rather, his neighbors, might celebrate the day which brought him to the age of 73.

He took this occasion to give papers a statement of his views about work and the modern tendency towards "slacker principles." His ideas may sound old-fashioned today, but Mr. Edison says:

"Today, I am wondering what would have happened to me by now if fifty years ago some fluent talker had converted me to the theory of the eight-hour day and convinced me that it was not fair to my fellow workers to put forth my best efforts in my work.

"I am glad that the eight-hour day had not been invented when I was a young man. If my life had been made up of eight-hour days I don't believe I could have accomplished a great deal.

"This country would not amount to as much as it does if the young men of fifty years ago had been afraid that they might earn more money than they were paid. There were shirkers in those days, to be sure, but they didn't boast of it. The shirker tried to conceal or excuse his shiftlessness and lack of ambition.

"I am not against the eight-hour day, or any other thing that protects labor from exploitation at the hands of ruthless employers, but it makes me sad to see young Americans shackle their abilities by blindly conforming to rules which force the industrious to keep in step with the shirker. If these rules are carried to their logical conclusion it would seem that they are likely to establish a rigid system of vocational classes which will make it difficult for a working man to improve by his own efforts.

"I have always felt that one of the principal reasons for American progress in the past has been that every man had a chance to become whatever he wanted to be. It used to be fashionable to be ambitious. The employee planned

to become an employer; the unskilled man sought to become more skilled. A young man was not well thought of if he was not striving for a higher place in life.

"There appears to have been a change in recent years. The present disposition is seemingly to say, in effect: 'I am what I am and so I shall remain. I aspire to nothing better than my present job. I ask for nothing, except larger wages and shorter hours.'

"Of course I realize that the leaders of union labor have their political problems and that they must appeal to the collective intelligence of their followers, which is lower than the average intelligence of the same men; but there ought to be some labor leader strong enough and wise enough to make trade unions a means of fitting their members for better jobs and greater responsibilities."

Though the world despise and taunt
You without reason, without rhyme,
Though misfortune jar and haunt
You with audacity sublime,
Though the skies be dark and glowering
And no rosy hopes reach flowering—
Remember, every morning the sun
Comes up on time.

WEBSTER COULD SAY NO BETTER IF HE LIVED TODAY

You are prosperous, you are happy, you are grateful. The fire of liberty burns brightly in your hearts, while duty and the law restrain it from bursting forth in wild and destructive conflagration. Cherish liberty, as you love it, cherish its securities, as you wish to preserve it. Maintain the Constitution which we labored so painfully to establish and which has been to you such a source of inestimable blessings. Be true to God, to your country, to your state. Do your duty. Then shall that Almighty Power which so graciously protected us, and which now protects you, shower its everlasting blessings upon you and your posterity!

—Daniel Webster.

THE "INHERENT RIGHT" TO STRIKE

Do citizens of this democracy possess a constitutional, inalienable, inherent, unquestionable right to strike? Is there any higher constitutional, unquestionable right common to citizens of this country that under certain conditions might justly deny the exercise of lesser rights? Does a right admittedly common to all transcend even that right itself when it is exercised by a few to the great harm and disadvantage of the whole body of citizenship?

Various answers to these pertinent questions have been given recently, ranging from the extreme views of organized labor leaders to the equally extreme views of some who are considering our problems academically. Somewhere between these extremes lie reason and common sense.

The point is undebatable that a right common to all of the people may not be abridged or withheld, or amplified, or restricted or exercised by less than a majority of all the people. And the right to strike must be determined by this rock-bed principle of democracy.

The claim of an inherent right to strike in any circumstance and under any conceivable condition has as little basis in justice as the denial of that right in any circumstance and under any conceivable condition. No citizen has an inherent right to injure any other citizen, and when the exercise of the asserted right to strike works injury to others, no matter how great or how small may be the number of those others, we may most emphatically deny in such circumstances that there is a right to strike.

Chancellor Kirkland, of Vanderbilt University, says that "when a man strikes, his right ends where the nose of the public begins." He may have the right to strike, but as soon as the exercise of that right is opposed to the greater rights of the public, he remains on strike in defiance of that greater right and without constitutional justification.

When we boil this question of rights down to its essence we shall find that the only unquestionable right we possess is a negative one—no one has the right to work injury to another. The right to strike is no exception, no matter what efforts, legislative or otherwise may be made to treat it as a thing apart.

Do not be ready to give up for the mere point of seeming amiable. Stick to your own ideas until you are convinced they are wrong—then quit them willingly and gladly once you have seen the better way. If you would convince another, do not argue but merely produce facts and leave the verdict to the reason of the other one.

"He that complies against his will,
Is of his own opinion still."

"PRICE MARKED IN PLAIN FIGURES"

The price of success is always marked in plain figures. Of course, it varies in price, but then we must remember there are many kinds of success, deserved and undeserved, temporary and eternal. Naturally the one kind costs more than the other. Then, of course, as in trade, competition affects the price of success as well as vegetables. And even the law of supply and demand keeps the cost fluctuating. And before looking up the present market price of success don't waste time looking for bargains—there are none.

One half the price of success, which is a fixed amount, is character, and ambition; the other half, a variable amount, is time and effort.

You must have character to deserve success, ambition to win it, time and effort to achieve it.

Your character is up to you. The ambition is up to you. Time is in the laps of the Gods, but nine times out of ten you will have it. Effort again is up to you.

Three-fourths of the necessary requisites for success therefore are up to you and the other fourth you can count on without much worry.

EARNING VS. MAKING MONEY

After all, the inventory and your annual balance sheet shows that you came out pretty well last year.

Wouldn't it be a pretty good idea to carefully analyze this balance sheet and profit account with this thought in mind:

"Did I merely make this money, or did I earn it? Did I earn the money by being absolute master of my own business; operating my business independent of all competitors? Did I earn this money by giving my customers better service and a better deal all around than they could have secured from anyone else? Or, did I merely make this money by pursuing various policies which I know do not meet with general public approval and which I fear may be illegal? Is my business record, my business policies absolutely clear and clean? What would be my standing in this community if all my business policies were written up on the front page of the local paper? Would such a story bring me new trade and new customers, or the reverse?"

Think it over, Mr. Retail Hardware and Implement Merchant, there is a great difference between making money and earning it.

What sort of a lamp are your feet being guided by? Perhaps one reason that your business success is not greater is that the dimmers are on, or the light itself is poor. It was Patrick Henry who said, "I have but one lamp by which my feet are guided, and that is the lamp of experience. I know no way of judging of the future, but by the past."

COST MARK LAW—MONTANA JUDGE DECIDES ACT UNCONSTITUTIONAL

Judge Bourquin of the United States District Court at Helena, Mont., has enjoined the Montana Trade Commission from enforcing its order requiring the tradesmen of the state to mark the cost as well as the selling price upon all goods offered for sale by them.

In rendering this decision, the court said that the act giving the Trade Commission such power was unconstitutional. The suit was brought by the Montana Development Association, composed largely of merchants. It was fought by the attorney-general of Montana, who on receiving the court's decree, announced that the state would appeal. Pending hearing on the appeal, the Trade Commission is powerless to enforce its absurd and unjust order.

The court declared it was inconceivable that "this all-embracing act could be sustained as essential for public health, peace and safety, for it ranges from the street corner vendor of popcorn and bananas to the merchant prince, from coal to diamonds, from the babe's first swaddling band and cradle to the coffin and grave of the dead. Trifles, necessities, luxuries, all are within its scope."

The court further said that while there is legislative power to regulate and fix prices and wages in businesses such as public utilities, grain storage, insurance, etc., ordinary mercantile business and common vocations are not of this public interest and consequence, hence the reason for legislative regulation does not apply. "The act," said the court, "would reverse the whole system of business economics that has prevailed since the foundation of the nation."

Business men everywhere have declared from the first that the law empowering the commission to compel merchants to disclose their costs was unconstitutional. From every section of the country Montana merchants were urged to seek an immediate test, which they have done, with the gratifying result reported.

One reason that so many intelligent people fail in what they undertake to do, is because they take too much for granted. They are ready to guess in place of actually knowing. Some day a surprise party awaits them and they cannot get over their astonishment at the predicament in which their easy-going acceptance of what they hoped to be true, has led them. Conditions which are sound and right will bear thorough investigation, and those which are not, should be tested for what they are worth.

Everybody whom we meet comes to bring us something or to get something from us. It is one of the most interesting games in the world to discover which.

FREQUENT TURNOVER AT A PROFIT THE OBJECT OF ALL BUSINESS

Turnover means investment of dollars in goods, sale of those goods, re-investment, resale, and so on, and the process must be repeated often and at a profit.

This is the goal of every business, large or small—whether the amount involved is one thousand dollars or one million—and the merchant will fail to score when not shooting at this target.

The profit made out of a business does not depend upon the amount of capital tied up in stock. On the contrary net earnings hinge upon the frequency of buying and selling—the speed with which dollars are made to produce.

The retailer's ability to superintend dollars, to keep them employed so that they are bringing in other dollars, determines the degree of success attained as a storekeeper.

The purpose of the retail business is buying merchandise, selling that merchandise for more than was paid for it, then re-investing and repeating the process.

Intelligent selling is therefore the kernel of the turnover proposition.

If a dealer bought a piece of merchandise for a dollar and never sold it, he would simply lose his dollar; if he sold it for no more than a dollar, he would not make a cent, in fact would be out his operating expense; and even if he sold it for a dollar fifty, but took six months to do it, he would not be serving the true purpose of merchandising, which is frequent turnover of invested capital at a profit.

When money is invested in goods, the merchant must, first, sell the goods; second, sell them at a profit; third, sell them quickly.

Always remember that money has earning power. You could put your funds in securities and make an average of six per cent any time, without doing a lick of work yourself. You get that return because somebody else is making your money work. If it became idle, you would not receive your dividend.

When goods move slowly, when it takes a long time to turn them into money they are simply wasting the earning power of the dollars invested in them; and when they are sold merely on an even basis, the earning power of working capital is likewise squandered.

Many a bustling community has changed into a Jackrabbit's playground because its Business Men refused to advertise. A city only advances as far as the business interests advance. If the business men draw up in their shells the town does also. Advertising is the medium of communication that lets each citizen gauge the enterprise of the commercial district and respond according to its degree of enthusiasm and progress.

The Trend Towards Bolshevism

A THOUGHT-provoking book, by Leslie M. Shaw, former Secretary of the U. S. Treasury, who views with alarm certain tendencies in American life. Mr. Shaw's highly successful private career, coupled with his conspicuously honorable public service, will insure him a hearing on the big questions that today confront the American people.

Make the World Safe FROM Democracy

Mr. Shaw speaks with a frankness that is at times startling. He calls a spade a spade. The gist of his argument is to make the world safe from democracy, meaning, of course, Bolshevism, I. W. W.ism, Socialism and all other isms that today stalk in the land. He sees in the modern or so-called progressive tendency to adopt measures that in his judgment contravene the Constitution, the ultimate decay, or at least undermining of republican institutions.

He throws down the gauntlet to those who would overthrow the Constitution, which established representative government, and charges that direct legislation and the recall of judges and judicial decisions are direct attempts to undermine the Constitution and as such should be looked upon askance by all those Americans who believe in a republican form of government as opposed to a democracy.

Bolsheviks and Socialists All Clamor for Democracy

His main idea is thus stated: "The Fathers created a republic and not a democracy. Before you dismiss the thought examine your dictionaries again and settle once and forever that a republic is a government where the sovereignty resides in the citizens, and is exercised through representatives chosen by the citizens; while a democracy is a government where the sovereignty resides in the citizens but is exercised directly, without intervention of representatives. . . . Every Bolshevik in Russia and America, every member of the I. W. W. in the United States, as well as Socialists everywhere, clamor for democracy. . . . Every true American is satisfied with representative government, and that is exactly what the term republic means."

The principles laid down are: "First—Representative government was the correct principle when established, and therefore is correct now and will be correct to the end of time. Second—The government was originally correct in granting liberty of action to the citizens and in limiting its own activities to strictly governmental functions. Third—Each and every departure from correct principles or wise policies has led by one pathway or another in the direction of Bolshevism.

"No one can read socialistic literature without recognizing that political, social, industrial and financial democracy is the goal of its endeavor. When the supreme conflict comes between organized government, organized liberty, organized justice and Bolshevism under whatever garb it may choose to masquerade, I do not intend anyone shall 'shake his gory head' at me and say that I helped popularize their universal slogan and international shibboleth. Unless we speedily give heed we shall be fighting to make America unsafe for democracy. Then we may have difficulty in explaining that we have meant all these years a very different thing than our language has expressed."

The Way We Are Drifting

He described the "democracy" toward which we are drifting in these words: "The kind of 'democracy' which the socialist and anarchist demand, confessedly hobbles the fleet, hamstring the athletic and removes all incentive to efficiency. The keystone of representative government is rewards according to merit, and the buttresses that support the arch are freedom of action on one side and justice according to law on the other.

"Republics keep a one-price store. Whoever pays the price, gets the goods. Democracy on the contrary, expects voluntary toil, popular sacrifices and then proposes to distribute the resultant good either pro rata or indiscriminately."

Beware of Socialistic Professors and Politicians

As clearly indicative of the author's views, this paragraph is quoted: "Socialists, near-socialists, Bolsheviks, anarchists, I. W. W.'s, non-partisan leaguers, single-taxers and all the infernal bunch of disturbers and propagandists of class hatred, unintentionally led and reinforced by a large per cent of the teachers of political economy and sociology in our colleges and universities, seem bent upon nothing less than a revolution in both our form of government and our policy of government. Unless something be speedily done to counteract, there surely will be precipitated in America what France experienced, and what Russia is now suffering."

TYPICAL OF DEMOCRACY

Eugene V. Debs, serving a twenty-year sentence in the federal prison at Atlanta on conviction of a charge of sedition, was unanimously indorsed for president of the United States by socialists of Oklahoma, who style themselves as the true democracy. Kate Richard O'Hare, now in the Missouri state penitentiary, was indorsed for vice president.

WE FIDDLE AND FIDDLE WHILE ROME BURNS!

(By John S. Capper)

The world is hungry for the things we eat, wear and use. Stark hungry! The cupboard is bare as a bone. Prices amount to staggering figures and the cry of our worker is—more pay; shorter hours—and then a shortage shoots the price of things up another notch! Again the cry—more pay; less hours.

Ye gods! Must the vicious circle continue? Shall we never see that it is more hours we need, that to reduce the cost of the things we use, we must produce not less but more?

I just received a cablegram from my brother in London, reading, "Market bare, prices awful, hopeless, sailing home. Oh, if Americans would grasp their opportunity."

Prices had gotten so high in this country and merchandise so scarce, we sent two of our firm abroad, hoping to find what we needed and at lower prices. The cable message is the answer! Merchandise is even shorter on the other side than here. They have nothing to sell and their shelves are bare. They want to buy, to buy from America—to buy the things that Americans make—and the answer of our workers is—reduce our hours—44 hours a week instead of 60—a cut in production of 25 per cent. The writer sympathizes with those who work. He understands what hard work, privation and the struggle of life is—he has lived it. He has walked eight miles a day to earn fifty cents, carrying water for the workers who built the town of Pullman. He has gotten out of bed at 3 o'clock to milk 15 cows on a winter's morning. He has put in 15 hours a day in a store. He is not a natural born plutocrat; rather—he is the son of a steel worker. He feels that he knows the needs of those who struggle, but anyone would be indeed foolish who failed to see that the waste of time of workers raised the price of the very clothes that he himself wore, and everything used by him or his fellow worker.

Short hours in the city has made the farm worker restless; he, too, wants short hours and increased pay. May kind Providence preserve us if farm workers ever insist on 44 hours per week, or an eight-hour day. You and I, my friend, will go hungry. I farm 800 acres and I know what short hours in the city are doing for the farm.

We may keep high wages, we may keep our present scale, and still reduce the cost of living by a simple remedy—work—good, hard, honest, faithful service—not 8 hours, rather 10 and then some—Let us for one year, at least, resolve to work, and work in earnest.

Like attracts like in friends and business associates, as well as in scientific fact.

THE ONLY SAFE FOUNDATION

Every intelligent business man who wants to see long years of prosperity bless our land and create permanency of employment for labor and for capital, should take heed to the dangers which attend the high profits of the hour.

Business men must realize that the thought which finds expression, "Get all you can, while the getting is good," is dishonest in spirit and destructive in its effect. We know that it is very difficult to resist piling on the prices when people are ready to buy anything and everything, from a silk shirt to a ton of iron, at any price named; we know that the law of supply and demand cannot be set aside by man's whims for any great length of time, and that only through measured production, which spells prosperity, or decreased consumption, which opens the gate to the land of poverty, can the upward trend of prices be permanently halted. Nevertheless, many manufacturers and dealers are doing their utmost to demand unholy profits, and are thus boosting prices beyond all reason and endangering their own and the country's continued prosperity. The sensible men of sound judgment should do their utmost to counteract this condition, even at the expense of smaller profits now.

The world's demand for many things, the world inflammation which was inevitable as an outcome of the war, more than cutting the dollar's purchasing power in half; our unwise income excess profits tax, our permanently high cost of food, all combine to lift prices to a new and higher level which must continue for years.

Despite these facts we must try to curb these influences rather than stimulate them. We must seek to save the producer of the golden eggs instead of ripping wide open the goose, hoping to get a basketful at one sweep. Let the conservative influences of the country, the sober leaders of America's trade and industry, discredit every profiteer who by exorbitant profits robs his customers and his country, robs himself of his own self-respect, whether he be the small or the big business leader, the billionaire corporation executive or the proprietor of the small country sawmill, the millionaire store or the little corner grocery.

It behooves everyone to realize that unless he can honestly say that he has treated every customer, every employe and every competitor exactly as he would wish they would treat him, he is not honest at heart nor is he following the only rule ever given to mankind which would insure permanent peace and prosperity.

The golden rule is the only safe foundation on which to build character or business or nations. In proportion to its observance is there peace and prosperity or chaos in life and in business.

Birds do not smile but then they sing.

Value of Getting in Touch with "New Comers" First

IF community populations were stable—if you could have the same people to deal with this year and next year that you had last year—your business of selling would be a great deal simpler than it is.

But community populations are constantly changing. Old customers—men on whom you could rely for valuable patronage—leave. New residents come in. They have trade affiliations yet to form. Potentially, they are as much your competitor's customers as they are yours. That makes one of the situations that constantly enliven the battle for trade maintenance.

General Forrest once remarked that the best way to win a battle was to "git thar fustest with the mostest men."

Much of the same principle applies to the battle for the trade of new arrivals in a community. Success generally goes to the dealer who gets to the newcomers first with the most reasons why his service is of most value.

One dealer accomplishes this mainly as the result of an arrangement with the leading real estate men of his town.

Through this arrangement the dealer gets advance information in regard to prospective new farmers. He gets acquainted with them on their first trip to look over their prospective purchases; takes them through his store and explains the goods generally used in the community, and loads them up with the manufacturers' literature describing these goods.

By the time the deals for the farms have been completed, this dealer has usually succeeded in making a buying visit to his store the next number on the program of the newcomers.

To the advantage of advance information through his real estate allies and to his aggressiveness in making the most offered, this dealer attributes an especially big increase in his sales this spring.

It so happened that a number of "back-to-the-landers" were attracted to the community and that a number of the farms in prospect for them were owned by men who had been steady customers of the dealer's competitors.

In the situation, the dealer saw two big opportunities. One was to supply steadily in the future farms that his competitors had supplied before. The other was to get big immediate sales; for "back-to-the-landers" usually have to buy complete outfits of new implements and machinery.

So the dealer took as big an interest in these farm-buying prospects as did the real estate men themselves. He secured special data on

each of the farms in prospect—the soil conditions, the most suitable crops, the acreage of tillable land, etc. Then, for each farm he arranged a list of goods best suited to meet the conditions.

He interfered in no way with the progress of the deals developed by his real estate friends, but he was "among those present" at most of the conferences. And when the deals were completed, he began where the real estate men left off.

He had something worth while to tell each of the new farm owners. They appreciated the information. They had to have equipment, and here was a dealer in equipment who had taken special pains to find out for them just what they needed and who had in various other ways merited their business friendship.

Some of them bought outright from the aggressive dealer. Others waited until they had "looked around a bit"; but by the time the farming season began, practically all of them had bought from the dealer who had reached them first and had taken special pains to help them. Remember, too, that many veteran farmers, in preparing to move from one farming community to another, frequently sell much of their equipment at public sales, expecting to buy new equipment to meet changed conditions on their new farm. They present an opportunity for trade aggressiveness on your part second only to that of the back-to-the-landers. And other opportunities come from the farmer's sons in your community, who branch out suddenly "on their own hook" and are in the market for new equipment.

Keep "listening posts" out for the changes that come in your community.

TYPICAL OF MOST GOVERNMENT OFFICES

Judge Gary, arguing against government ownership, said, to support his contention:

"People don't work for the government the same as they work for an individual employer.

"I know a man who has to call daily at a certain government office. He says the hours are 10 to 4, and the way the employees loaf is scandalous.

"He says that one employee, every afternoon when the clock strikes three, puts down his newspaper, gets up out of his armchair, yawns and remarks:

"'Fifty-nine minutes to four—only a question of minutes—I may as well light out.'

"And out he lights."

The Good Clerk One of Your Biggest Assets

(By H. M. Rallsback)

THE clerk in the retail store is a mighty important cog in the world's selling mechanism. It is through him that sales ideas or methods either succeed or fail.

He represents the direct contact of the merchandising business with the buying public.

He has the best chance in the world to get intimately acquainted with the various aspects of human nature that manifest themselves when prospects approach that important point of separating themselves from hard-earned money for a needed article.

He may, or he may not know the formal rules of theoretical psychology that are supposed to govern human action, but he practices real, selling psychology in the store every day.

That is why so many of the better selling ideas and methods that are standard today can be traced back to live clerks, whose big ambition in life was to sell better than anyone else.

If all retail clerks were chips off the same block, and if there were never any variation in the attitudes of the different prospects who come into the store, the selling rules that clerks have evolved in the past would be all that the modern clerk would need for guidance.

Varied Personality

Varied personality, however, cuts a big figure. Some mighty good clerks, for instance, don't have the naturally jolly disposition which produces the spontaneous straight-from-the-heart smile and other evidences of cordiality that are rightly adjudged to be valuable factors in effective salesmanship. In spite of this deficiency, they get results through unusual earnestness, or some other characteristic.

Prospects also differ widely as to disposition. No two of them are exactly alike. The method that is best in selling to one may be entirely wrong in selling to another. It is up to the individual clerk to learn by experience how he can handle to best advantage the different types of prospects.

Field Open for Originality

Furthermore, local conditions sometimes make advisable the use of an exception to a standard selling rule rather than the rule itself.

There is far from being anything cut and dried about the job of the retail clerk. The field is wide open for originality. There are numerous possible new variations of old ideas and methods. "Brand new" ideas are being born every day. And there are countless numbers of them yet unborn.

So far as general rules go, these two, given by a man who is a successful merchant today

largely because he learned merchandising thoroughly as a successful clerk, are worth noting.

1. When a prospect needs to be sold on an article, demonstrate the article thoroughly.

2. When a prospect comes in who has already been sold through advertising or some other of the store's selling forces, follow the law of least resistance, cater to the buyer, watch closely for the proper time to close the sale and—close it.

The first rule is important because seeing the advantages of an article demonstrated is always more effective than simply hearing someone describe the advantages, or reading about them in an advertisement.

Of practically every article for sale, there is some feature that can be demonstrated so that the prospect will understand the selling point far more readily and more convincingly than is possible when only mere words are used.

Real Business Tragedy

The second rule is equally important. A real business tragedy takes place when the desire to buy, that caused the prospect to come to the store, fails to develop into an actual sale, through some error of omission or commission on the part of the clerk.

Many a live prospect has been lost through unnecessary sales efforts. A good instance is the often-told story of the clerk in a piano store who failed to let well enough alone. A farmer and his wife came into the store to buy a piano. Before coming, they had made up their mind to buy a certain make that the store was selling, provided they could exchange an old organ as part payment. Their proposal being satisfactory to the store management, the transaction was closed. After giving directions about sending out the new piano, the farmer and his wife started to leave the store. Just then the clerk sat down at the organ and played an old melody, hoping that the music would please the old couple. Instead, it reminded them that their daughter, who had died recently, used to play the same piece on the organ, and they decided to keep it. That decision spoiled the sale of the new piano.

Continued Good Will Important

Working for the continued good will of a customer is regarded by good clerks as just as important as making the immediate sale.

A good illustration of the effect that clerks have on the patronage of a store, by failing to work for good will, is given by the result of an investigation conducted by a middle west store.

The manager had noted that a number of customers had quit coming to the store. He felt

sure that it wasn't because of poor goods, for the greater part of his stock was composed of trade-marked, nationally-advertised articles, manufactured and backed by long-established firms. Faulty service seemed the more plausible reason. Just to make sure, he sent out 200 letters of inquiry. He received 198 replies. And the results, so far as the clerks affected them, checked up as follows:

Indifference of clerk, 47; attempts at substitution by clerks, 24; tricky methods, 18; over-insistence by clerks, 16; insolence of clerks, 16; tactless policies by clerks, 11; ignorance of goods, 6. Of 198 former customers, 138 had quit coming to the store because some of the clerks had failed to work for good will.

The clerk who works for good will does his best to make friends readily. He strengthens his faculty of remembering names, faces and localities. No other acquirement is of more value to him and to the store than the personal friendship that gives him the right to call each customer by his first name, and the ability to locate the customer instantly and to conduct the conversation on a personal basis right from the start.

Reason for Success Talk

A conversation recently overheard in a small store illustrates this value of friendship.

A group of customers and the merchant were discussing a news story in the local paper concerning the merchandising achievements of a man who had once been a clerk in the merchant's store.

"Yes," commented the merchant, "I always knew that Charley would get along all right. He could make real-honest-to-goodness friendship quicker and better than anybody else that I have ever known. He even knew the name and rabbit chasing qualifications of every farmer's dog within fifteen miles of town. Lots of customers used to wait their turn just to get to talk with Charley while he waited on them."

The matter of teaching your clerk to be a better salesman is of great importance to you. He'll usually prove to be a better clerk if you take him into your confidence. Impress upon him the importance of keeping a well arranged store, and tell him why a seasonable display is good business practice. Have him give each prospect a circular describing the article he is interested in if he doesn't close a sale. Then impress upon him the advisability of keeping track of that prospect. In short, try to make a merchant out of him—in the same way that you have made one out of yourself.

Do you lack endurance—staying qualities, steadfastness and persistence? If you do you are never likely to reach the goal, for "endurance is the crowning quality."

YOU CANNOT STAND STILL

(Copyright by John Blake)

When the ship's propeller stops revolving, the ship drifts with the tide or wind or current. Unless lashed to a dock or frozen in the ice, no ship ever stands still.

Life is a wind we must breast or a current we must stem. We must either go forward or back.

Going forward is difficult, at first. Time and study must be spent in learning the dreary commonplaces that are necessary to progress. It is not so very hard to keep abreast of the general procession. But the general procession does not move very fast.

Compared to the progress of the thinking, ambitious man, its speed is about as that of a glacier compared to that of a river.

Your life will amount to little if you do not pull a little faster than the great majority of your companions. And pulling ahead, even a little, means very hard work.

But hard work is not injurious. Done intelligently, it is even enjoyable. Once get the habit of hard work, and you will prefer it to easy work. And you will find, furthermore, that it will bring results, and accomplishing results is about all that is worth doing in this existence.

Beware of standing still. It is a sorry, a pathetic business. At first you see your friends, one by one, passing you. Younger men—men not as well equipped—gain positions that are closed to you.

Soon comes the day when you realize that you are actually losing ground. The job you are holding becomes more irksome. You find yourself neglecting its duties.

And some morning you walk into the office and discover that another man is sitting at your desk. After that, unless you are a seven-fold wonder, there is no hope for you. You slip back and back till you are glad of any employment that will keep bread in your mouth.

This is a dismal picture, but it is worth looking at—now. If you do not want it to resemble your future, keep going ahead. Keep your mind and body exercised by taking on new and more difficult duties. Don't be afraid of work. It becomes easier as you get better acquainted with it. Do your resting in your vacation time. You can afford to stand still then. The relief will do you good. But when you are back in the stream set your propellers churning faster than ever, and you will escape the horror that comes to every man when he discovers too late that he is going in the wrong direction.

There isn't much use giving instructions to other people unless we are in authority and actually see to it that our instructions are carried out.

A CONVENIENT FORM OF BANK CHECK

Here's a form of a bank check which every merchant should keep on his desk for the convenience of customers in paying bills. Instead of having checks on various banks, since in one community checks on half a dozen or more banks might be needed, merchants will find this check can easily be drawn on any bank. It is inconvenient to cross out the name and then write in a new one on usual bank checks, and this form saves time and is more convenient.

It is the most convenient we have yet seen devised.

FORGET TOMORROW

This Is the New Day

Miss the way yesterday? Try again today. If you failed yesterday you have a brand new chance to succeed today.

This is a different world today than it was yesterday, altogether different. When you awoke this morning, you awoke in a new world and then, a lot of people have done what you felt like doing yesterday, thrown up their hands, surrendered. They are quitters. There always are and will be quitters. Every time one of them steps out there is a good chance for you to step in.

Yesterday is ancient history. This is a new day today, with new opportunities.

Yesterday you felt discouraged, everything seemed to go against you. You fought with your back to the wall. You thought you had failed. Well, you hadn't. You were just merely being slowed up a bit. This morning you have a new chance. There is a new point of view. You learned something yesterday. Use that knowledge today. It is your tryout, your test. It is no crime to make a mistake. Everybody has done that. But it is a crime to keep continually making the same mistakes day after day.

HATS OFF TO THE SALESMAN

He is a creator. Many a time no order would come if he were not there to show the buyer where his real need lies. Give him credit. Although the temptation is always before him to unload on the buyer who trusts him, your own experience proves that very few of the gentlemen who call on you have ever given you anything but a square deal and their heartiest co-operation in making your business successful.

ENTHUSIASTIC THOROUGHNESS

"He has the habit of enthusiastic thoroughness," was recently said of a young man. That was a great compliment.

Enthusiastic thoroughness means that a man will see in a business that which others do not see, and he talks so enthusiastically about it that he just naturally sells everyone he comes in contact with. His enthusiastic thoroughness and knowledge of his business, means that he usually receives a salary out of the business which others would never get.

Many people ask, "How does it happen that this man draws such a large compensation?" The answer is easy, "Enthusiasm, thoroughness, coupled with knowledge and action, are the prime qualities." His organization builds up and goes ahead every day.

Any individual who combines the above qualities is a sure winner.

IF YOU

Talk about your ill health, it will make you less healthy.

Worry about your work, it will make you less capable.

Imagine you are disliked, it will make you less likeable.

Find fault with others, it will make them faultier.

Anticipate evils, you will be sure to bring them upon you.

Talk much of what you are going to do, you will never do it.

Sit bemoaning the past, you will never get on in the future.

Complain of lack of opportunities, you'll miss what you have.

Wail bitterly that it is an unjust world and life is not worth living, you'll find it come true for sure, in your own case at least.

The Evolution of the Washing Machine

PRECEDENT or custom has always been the governing factor in the lives of all women. In the early days of this country no woman could have a greater honor conferred upon her than to have the reputation of being the best housekeeper and household manager in the community. In contrast to those days, consider the period just preceding the war.

Women resented doing such irksome tasks as washing, ironing and sweeping. They would not permit their neighbors to see them hanging out their own clothes. Horrors! It was a reflection upon husbands—it indicated a lack of consideration and support.

But the days of idleness and indolence are past. If women are not actively engaged themselves in performing the various household tasks, they take serious interest in how it is accomplished. Formerly labor was more plentiful than money, and for a small sum it was easy to employ help. Today the distribution of money is so plentiful that our former laundresses and char-women have graduated from their usual tasks and can only be secured at advanced sums of money.

The truth of the matter is that the tasks are not worth the money asked, and intelligent women are casting about for ways and means for the correct weapon to eliminate exorbitant charges. How many weeks do you think it will require for housewives to go on a strike—should another advance be imposed upon them?

Demand for Labor Saving Appliances

Thousands and thousands of women throughout the country through advertising, through praise of friends and through necessity, are purchasing labor-saving devices that simplify and make easy the necessary tasks. Ten years ago the electric washer was even more rare than an automobile. In the past two years the output has not been great enough to supply the demand.

Women everywhere have become frantic in striving to keep down expenses, procure efficient laundresses and have sufficient clean linens. Disappointment on wash days, rushing down in the laundry and rubbing out the necessary articles to tide over, has been the last straw and the dependable maid—the one that will wash all day without asking overtime and

without grumbling is the answer—the electric washer and electric ironer.

Every Home a Prospect

The women who are physically unable to perform these tasks or the wealthy who would not take the time to do it or feel so inclined, the electric washer appeals to them also. Due to the fact that there is a great shortage of labor, it behooves them to install devices that will enable the curtailed help to do efficiently all of the work in half of the time. For these reasons every home in the land is a prospective buyer.

"A woman's work is never done" is rapidly becoming a fact of the past. With the aid of the power washer, the power ironer and sweeper, the enterprising woman can reduce duties to a twenty-eight hour week!

The expression "Is your washing on the line at nine?" is not merely a catch phrase—it has become a reality. Hosts of women are eager to give you testimonials, exclaiming that their electric washer and ironer are the most valued possessions in the home—that the washing can be accomplished in one hour and the ironing in another.

Do women read advertising? Statistics have been gathered together in an endeavor to learn which medium has the greater influence upon women in their purchases. Results were that they find women trace their purchases almost wholly to the education and information they derive through National Advertising.

Demand Waiting to Be Filled

Knowing this the merchant has to announce himself as headquarters for washers, refrigerators, electrical devices and appliances—he need not worry about distribution, as the demand is merely waiting to be filled; the desire backed up by necessity has already been created.

Do not allow yourself to merchandise, however, in a hap-hazard manner. Be the doctor and prescribe just how many you can dispose of in your community. Study conditions well set the goal sufficiently high, and then go out after it.

Take electric washers and electric ironers, for instance, one to sell for \$125 and the other to sell for \$160. Set aside 4 per cent of the selling price for advertising—that means \$5 per

MABEL HENNESSEY

the wide-awake advertising manager of the Bunting Hardware Co., Kansas City, who again favors the readers of the **HARDWARE WORLD** with an account of the way she and her principals are successfully handling washing machines.

Since this article was written, Miss Hennessey has resigned her position and accepted one with the Winchester Repeating Arms Co.

Bunting Hardware Co.

Wash-Day Turned Into Wash-Hour

We are demonstrating that the "One Minute" Electric Washer will wash clean within less time than you could ever believe possible. The One-Minute tub keeps the water hot—you will not find that it has lost all of its heat after the first wash. The adjustable electric wringer is one of the good features.

\$10 Cash Payment
\$10 Monthly Payments

Always appealing to the wife and mother and home instinct in advertising household appliances like washing machines.

machine and \$6.40 per ironer. If you aim to sell 20 machines and 10 ironers that month, start right in and advertise to the tune of \$100 for one and \$64 for the other that month. (In large cities the goal will be much higher.)

If the first week you sell only three machines, do not get cold feet and discontinue the balance of the campaign—you'll find beyond doubt that you will sell the other seventeen the last three days of the month. You will also find that where you will sell twenty machines on this amount of advertising, you will obtain names of prospective purchasers in much greater number. It will be up to you to follow

Bunting Hardware Co.

Demonstration of Washing Electrically

The "One Minute" electric washer is nationally known as the "expert" washer of clothes—will absolutely get all of the dirt out of children's clothes and neck-bands of shirts.

We will demonstrate this week how this Washer will give pleasure and save money, worry and clothes if installed at once.

**\$10 Cash Payment,
\$10 Monthly Payments**

Advertising price, terms, and a public demonstration, and at the same time paving a way to a sale, with a domestic atmosphere for the washing machine.

these up, by letter, by telephone and the personal call. A demonstration can be arranged in your store and the "waiting list" can all be invited to attend.

Keep in Touch with Customers

It is indeed the wise merchant that writes

What is worth doing at all is worth doing thoroughly, says Mabel Hennessy, advertising manager of the Bunting Hardware Co., Kansas City. When she displays washing machines, she devotes a whole big window to them this way, and they cannot help but attract attention, arouse the housewife's interest, and take her to the second floor for a demonstration. One washer jammed in the confusion of a tool window would produce nothing but confusion and distraction on the passerby.

the purchaser of an electric washer or ironer not later than one month after delivery, asking their opinion as to the merits, what percentage of labor and expense it has saved them, etc. You will be surprised at the number of testimonials you will obtain. You will also receive a few cases of necessary adjustments, for there are in this world a few people who can never operate anything according to directions.

For the first time in history efficiency and scientific management has entered into American homes. Skilled mechanical devices have replaced unskilled, overpaid servants of former days, and the installation of such conveniences should mean hundreds of dollars in real profit to the live-wire house-furnishings merchants.

When you go on another man's note, you assume the responsibility for his follies, his mistakes and his ill fortune.

FORGET IT

When with troubles you're beset,
Don't waste time in deep regret,
Just forget it.
What matter if you're feeling blue,
Even though the Spanish "flu"
Is lurking near to snatch at you,
Just forget it.

Don't keep grumbling every day,
Though the deuce may be to pay,
Just forget it.
Think about the boys in France
Far across the blue expanse,
They all took that fighting chance,
They'd forget it.

Buckle in and do your bit,
Keep your mind and muscles fit,
Just forget it.
Do your very best today,
Keep your heart both light and gay,
Let's go singing on our way,
And forget it.

If you bear a burden sad,
Help to keep the neighbors glad,
Just forget it.
Other men have had mishaps,
You can find some lonely chaps
Who are always blue perhaps,
So just forget it.

Lay aside your grouch awhile,
Wear a happy, sunny smile,
Just forget it.
Don't sag back and growl or whine,
Get busy now and fall in line,
Tell all the world you're feeling fine,
Just forget it.

—Arthur Greene.

RISKY TO ADVERTISE COMPARATIVE PRICE

Advertisements which quote comparative prices and comparative values are dangerous by way of indicating to the public that the advertiser makes an unwarranted profit at the supposed "usual price," declares a bulletin to merchants which has been issued by Stanley Wyckoff, Indiana Fair Price Commissioner of the Department of Justice.

In citing this bulletin from Mr. Wyckoff, the National Vigilance Committee of the Associated Advertising Clubs of the World says this is one additional reason why such advertising should be avoided.

"The reader of such an advertisement is likely to believe one of two things," says the bulletin. "Either she believes the statement, and therefore thinks that the merchants make an unfair profit at the usual price, or she disbelieves the advertisement, which is still worse."

In sending the bulletin to Indiana merchants, the Fair Price Commission of Indiana had the co-operation of the Better Business Bureau (vigilance committee) of the Indianapolis Advertising Club. Mr. Wyckoff said in part:

"The Fair Price Committee has received many complaints of suspected profiteering by Indianapolis merchants, occasioned by the use of extreme comparative prices and values in recent advertising. The average reader of intelligence in reading such advertisements of great reductions at a time when the news and advertising columns are filled with stories of advancing cost and shortage in most lines of merchandise, can only conclude that the merchant so advertising has either been making an unconscionable profit or is lying."

Can you name a single solitary man who has ever achieved a great, big, unqualified success in any line of legitimate business by limiting his mental and physical exertions to exactly eight hours a day?

INSTINCTIVE FEMININE SPIRIT

Little Fanny had a beautiful new bonnet, trimmed with swan's down, and her Aunt Helen took that occasion to say that she ought to go to church. The child was nearly 3 years old, and her aunt said it was high time that she began to go. So the next Sunday morning the two walked down the broad aisle, just as the minister was extending his hands and beginning the invocation prayer.

After reaching home that day her uncle asked her how she liked going to church and what the minister said.

"When we went in," said the child, "he lifted up his hands, and said, 'Oh, holy God!' I s'pose he must have seen my new bonnet."

Toys "Do" for the Merchant Who Dares

JUST to show what can be done by a merchant who has vision and confidence, and who will try all new things with an honest, contribution of hard work, good sense and faith in the trade and in his customers, we are describing the experience of C. S. Robertson of the Robertson Hardware Co., Bremerton, Washington, in introducing trade in toys.

Although the Robertson Hardware Co. has been established in Bremerton for some years and is respected in the community, never a toy had been handled up until four years ago. The Christmas season was like any other season, and the easy spending, light hearted Christmas buyer did not pass through the aisles of the Robertson Hardware Co., while doing his Christmas shopping.

Just as an experiment, on the advice of an interested jobber, Br. Robertson bought a \$50

C. S. Robertson, enterprising merchant at Bremerton, Washington, began his present annual \$10,000 toy business with a \$50.00 stock four years ago.

stock of toys four years ago. Not knowing the toy business himself, he relied on the jobber to make the selections for him, and as is the case with the merchant who has done the right thing by his jobber, and selects his jobber intelligently, Mr. Robertson found that the jobber took a personal interest in the selection of stock. He had no difficulty in disposing of it.

With that as a start, in these few years he has built his Christmas toy business up until he absolutely cleaned out to the last item, a \$4,000 stock in December, 1919.

Has Ordered \$10,000 Stock

Despite irregularities and uncertainties in trade conditions, Mr. Robertson showed his opinion of the toy business by placing an order for just twice his 1919 supply in January so that next year he plans to do nearly \$10,000 worth of toy business.

In commenting upon his success along this line, Mr. Robertson says there is no secret but in taking the chance. The goods must all be displayed, and the people must be brought to the store. To accomplish the first purpose special counter and display racks were devised, allowing for more shelf space in the center of the store.

In his store area of 40x100 Mr. Robertson so arranges his seasonable goods that the toy stock is before the customer in plain view. To bring people to his store, local newspaper advertising is largely resorted to, and this publicity is increased three-fold during the holi-

BRING THE KIDDIES
For a Trip Through
TOYLAND

WE have all been children. In fact, most of us are merely grown up children. The large stock of toys on display at this store is really a revelation in American-made goods. Never in the history of the United States has there been such a wide variety of toys shown. Toys that are designed to instruct as well as amuse. We have mechanical toys that are really little short of marvelous in their perfection. But all toys here are not of the mechanical sort; for there are dolls, doll beds, stoves and kitchen outfits, wagons, bicycles, velocipedes, automobiles, steam engines, electric motors, aeroplanes that really fly, tops, blocks, carpenter tools, in fact, there is little to be found elsewhere that is not on hand here. Come—bring the kiddies and see their little faces light up with joy when they behold the wonderful fairyland that has been created in this store.

FOR THE GROWN-UPS

In getting ready for this Christmas we have not overlooked the grown-ups, but have laid in a wonderful stock of articles suitable for them. There are so many nice presents to be found here that they almost beggar description.

Brazers, Silverware, Casseroles, Art Pottery, Cut Glass Ware, Electrical Appliances, such as Irons, Toasters, Percolators, Grilles, Library Lights, Hand-painted China, Smoking Sets and all kinds of Fancy Cutlery. In fact, the person who cannot be satisfied here is really hard to please.

The Big Store where Economy, Quality and American-Made Goods Predominate
885 PACIFIC AVE. PHONE 385

During December the Robertson Hardware Co. increased its newspaper advertising three-fold.

day season. Furthermore, window displays and special placards have proven valuable.

Jobber Selects Stock

The stock is still bought through the jobber and the jobber selects and assort it. Just as an example, this hard-headed hardware dealer with the aid of his regular force of six clerks, disposed of \$500 worth of dolls last Christmas.

One not acquainted with the toy business would say that any hardware dealer with \$500 worth of dolls was out of his depth in water, but here is the man who has done the deed, and he recommends just such a policy to any other progressive merchant who wants to bring the Christmas buyer to his store.

Dozens of Phonographs

A while before Christmas, young Miss Robertson wanted a phonograph, so her father bought two and placed one in the store for sale. With this beginning, he found what the demand for phonographs was, and before Christmas time he had sold 12 similar phonographs. There had never been a sale of this sort in his store previously.

The Christmas Gift Store

Only 6 More Shopping Days Before Xmas!

THERE is no need for you to worry and plan about what you intend to give. Come to this store and we will solve the problem for you and quickly. Our sales force, although busy with the heaviest Christmas shopping, never the less will always find time to help you plan your Christmas presents, whether it be for father, mother, sister, brother, boy, girl, baby, wife or sweetheart. We have a world of presents of all kinds suitable for any one. Below we make a few suggestions.

For Men

- SMOKERS' SETS
- SHAVING SETS
- RASORS—All kinds
- FLASHLIGHTS
- HUNTING KNIVES
- FISHERMEN'S OUTFITS

Many other things too numerous to mention

For Women

- HAND PAINTED CHINA
- CUT GLASSWARE
- POTTERY WARE
- CASINOLES
- SILVERWARE
- ELECTRIC TOASTERS
- ELECTRIC PERCOLATORS
- ORNAMENTAL CLOCKS
- MANICURE SETS

And many other things both desirable and appropriate.

FOR THE BOY

- ELECTRIC TRAINS
- SLING SHOTGUNS
- AUTOMOBILES
- TRACTORS
- CAMPMASTER TOOL SETS
- AIR GUNS
- RAVING TOYS
- WAGONS
- COASTERS
- MICROSCOPICAL TOYS
- STEAM ENGINES
- SAIL BOATS
- MOTOR BOATS

And a thousand and one other articles dear to the hearts of American boys.

FOR THE GIRL

- DOLLS of all kinds
- DOLL DRESSES
- DOLL FURNITURE
- DOLL BEDS
- COLE TOYS
- KITCHEN CABINETS
- WASH TUB and WRENCH
- PAINTING OUTFITS
- TEDDY BEARS
- NEWSPAPERS
- DOLL TREES

Dresses and realies of other things that will delight the hearts of the girls.

ROBERTSON'S

365 PACIFIC AVE. PHONE 365

Artistic, effective advertisements of this sort filled the store for the holiday season. These people got the habit of trading at Robertson's.

All this only shows what can be done by the enterprising dealer, who will take a sensible risk and branch out. Here is a merchant with metropolitan competition, department stores and mail order houses only a mile away from his store, yet the people in his community come to him and tell him they see goods on his shelves that they couldn't find in the large stores.

THE DOLLAR

There is no sentiment about the dollar.

It rests as peacefully in the filthy pockets of a beggar as it does in the silken purse of the millionaire.

It is a blanket that covers a multitude of sins.

It brings joy today—it is the cause of sorrow tomorrow.

It never speaks—yet it talks.

It circulates freely—yet it keeps in hiding.

It is the ruination of millions.

It lifts millions out of the depths of despair.

It comes with a promise of gladness.

It leaves many disappointments.

It trembles at its strength.

Yet we can crush it with one hand.

It is always the same—yet it's ever changing.

The lack of it promotes industry.

The excess of it causes idleness.

It creates trouble—it brings peace.

It makes one restful—it makes one restless.

It lubricates the axis the world revolves upon.

Withal, it is a silent friend.

Without it we perish.

MARK TWAIN ON SALESMANSHIP

Have you ever read Mark Twain's "Sermon to Salesmen?" The famous humorist went to church and heard a missionary talk. He says: "He was the most eloquent orator I ever listened to. He painted the belighted condition of the heathen so clearly that my deepest passion was aroused. I resolved to break a life-long habit, and contribute a dollar to teach the gospel to my belighted brethern. As the speaker proceeded I decided to make it five dollars, and then ten. Finally I knew it to be my duty to give to the cause all the cash I had with me—twenty dollars. The pleading of the orator wrought upon me still further, and I decided not only to give all the cash I had with me but to borrow twenty dollars from my friend who sat at my side.

"That was the time to take up the collection.

"However, the speaker proceeded and I lost interest and finally dropped off into a sweet slumber; and when the usher woke me by prodding me in the ribs with the collection plate, I not only refused to contribute, but am ashamed to state that I stole fifteen cents from the plate."

Start a "Fix It Now" Campaign

Suggestions to Increase Your Sales in Your Community

The head of a well-known accident insurance company said quite recently that 90 per cent of all accidents in the United States might have been avoided by the simple expedient of driving a nail in the right spot at the right time. No doubt most accidents are the result of carelessness in the making of repairs.

Loose screws, unsafe boards, or ne-er do well tools, have caused more deaths than the influenza epidemic of last year. Much deterioration of property, no doubt, can be traced to a cause which, if remedied immediately would have been a matter of a few cents, while the now ensuing repair may cost hundreds of dollars.

Have you ever looked over your own establishment and noticed the enormous number of minor defects which have appeared in all directions? What happens in your own place, happens all over the United States. If a man should begin at once to repair all the small defects of the average house, he might be busy for the best part of a month and still have done only all the more important repairs.

With the increasing lack of help all over the country this condition has grown during the last years. Never has the average farm building been so much in need of repair, and the same applies just as much to the industrial buildings and ordinary dwelling houses. There are houses right in your neighborhood where the landlord has not been able to have any important repairs done during the last two years.

Neglect Makes for Loss

The condition is one which is of special interest to the hardware dealers of this country. Let us assume that each American citizen has omitted during the last year to drive only one nail into a spot where it was needed, and we have a matter of 105,000,000 nails less sold in the United States. The same applies to screws, window hooks, locks, in fact practically to all classes of goods distributed by the hardware stores.

A negligent handling of necessary repairs in this country represents not only danger to life and limb, but carries also a material financial loss to an important industry and trade.

No doubt the national conscience as to moral obligation of making repairs has slipped a good deal during the last years. We have been so busy with our own affairs that we have omitted to attend to the just as important affairs of our surroundings. A change should be brought

about, and the hardware dealer can effect it.

There is no denying that the nation can ill afford at the present time to waste its latent resources of industrial materials and energy upon making extensive repairs where immediate repair would have been all that was required. Therefore, everybody who is responsible for any kind of property should do all in his power to keep it shipshape.

Negligence in the execution of small repairs is the most insidious form of waste, because it is cumulative in its action. It starts with one cent and may end with an expenditure of many thousands. Talking only about the necessity of small repairs will not help very much.

Bringing It Home to Each Individual

to each customer, however, will turn the trick. It will make him conscious of the fact that something more is needed in his home than rugs and window curtains. Have that home in good repair. Let every home in the United States be snug and safe. Such a movement, if properly conducted, may be made the source of a considerable activity in the hardware trade, which at present seems to be the chief commercial sufferer from the existing condition.

Why Not Have a "Fix It Now" Campaign in Your City?

National and local weeks in support of one or the other public policy have now become so generally known in this country that it is not necessary to enter more fully into a description of their value for the promotion of new ideas. The national clean-up week, the tooth brush week, and other similar movements, have shown what can be done with comparatively small means to set going an entirely new current of thought in even the dullest community. The "Fix it now" week should be run on similar lines.

The "Fix it now" week need not be confined to hardware dealers. It interests as much the builders, the plumbers and the roof layers. Missing door knobs, knife handles and broken windows are rampant all over the country.

Roofs are leaking at all times of the year, and the well chain becomes defective at frequent intervals. Health, happiness and temper depend upon the correction of these defects. Therefore, let "Fix it now" week be the affair of the whole city. The coal crisis, labor troubles, and the recurring shortage of many articles of everyday use have prepared the minds of the population of any city for a movement of this character, and it is this realization of pending

disaster, if not forestalled early, that has to be awakened in the general public.

As we are (or ought to be) accustomed to go to the dentist to have our teeth examined before they actually hurt, so we want to look around for the indications of property decay and deal with it before it has set in. A rust spot on the roof can be eliminated with a thin coat of tar. A rotting piece of wood can be cut out without much trouble and be replaced in dry weather, but may have to stay for a considerable time unmended after the wet season has come. Agricultural machinery should be examined occasionally for evidence of decay.

Do It Individually if Your Community Don't

The "Fix it now" week, although arranged by the trade in toto, gives nevertheless excellent opportunity for furthering the individual trading interests of one particular concern. The week is arranged to awaken the interest of the public in general. It is up to the individual firm, however, to make the best use possible of the opportunity according to the general policy and standing of the store. Yours may be the biggest store in the city. But you must realize that a store is never better than its neighborhood.

If a city is dull and sleepy, if competition is inferior, the market of the store must naturally be small. If the city is alive, if competition is keen and continually on the alert for something new, there is also an active market giving the chance for a large turnover for every store operating in that particular field. There may be much larger stores in the movement than yours. The local dry goods stores are often big enterprises and they also sell hardware. But the hardware store can very well compete with the department stores in the sale of hardware, and the participation of these stores in a "Fix it now" campaign with their great drawing and advertising power is very useful.

Make use of the window, advertising and personal calls during the campaign. The average hardware store is interested principally in such repairs pertaining to the house, to implements and general hardware used in the house, stables and field. Considering that all these commodities are well exposed to use and in consequence apt to require frequent repairs and renewals, they promise quite a considerable return in sales during the campaign week and afterwards.

The week is a good time for making a general window display of tools to be used for repair work and materials, adding to these all the ordinary tools for carpentering, iron work and builders' work. Have small bottles of tar in the window for roof repairs and general waterproofing. A selection of tar paper for the same purpose and a number of waterproof colors for painting doors will find at-

tention. Lead, small strips of tin sheeting and similar articles must be shown, also a number of special preparations like glass cement, patent repair appliances and similar articles, which find always a ready sale during special weeks.

A small box filled with an assortment of nails and small screws that might be wanted in the average household, to sell for ten cents, and a larger one for twenty-five, would prove a good seller, and what about a special offer for repair work including nails, screws, cement, a tin of tar, weather strips, and other handy repair material to be sold to farmers at reduced rate? No show window is complete without a series of window posters explaining the uses of the goods and giving advice for their application.

You Can Interest the Entire Family

If you have two windows, use one for the display of new merchandise. If a man once gets dissatisfied with his house he is bound to find a good deal of cause for dissatisfaction. There will be a great many new locks in demand in the weeks following the campaign, and women will get fussy about their kitchen utensils. Take the opportunity to educate the people about the advantages of using galvanized goods. Galvanized locks, hooks and screws are a great convenience, and they keep so much longer. All that can be done in the second window.

Naturally a "Fix it now" campaign is not only meant for selling repair goods, but its great value for the nation consists in its possibilities to avoid the necessity of frequent repairs and their resulting economic loss. If our householders could be educated to use first class material in the beginning and to protect their properties against the ravages of rust, etc., they would add materially to the life of all real property in the United States. "Fix it now" week will fight such enemies of property as rust, dampness, etc. Here is a good window sign for the campaign week.

"Rust destroys every year 1,000,000 tons of steel in the United States. Help stop this loss."

And another:

"One ounce of prevention is better than one pound of cure."

"Fix it now" weeks should become popular in many of our country communities. How are the prospects in your particular town or city?

Parson—"Do you know the parables my child?"

Johnny—"Yes, sir."

Parson—"And which of the parables do you like best?"

Johnny—"I like the one where somebody loafs and fishes."

WHEELS OF BUSINESS MOVING AT FULL SPEED

(By Julius Krakauer, Vice-President and General Manager Krakauer-Zork Company, El Paso, Texas)

Five hundred words, set to the music of the "humming" of the country's industry and commerce, might well be the inspiration for this article, which is also drawn from an inexhaustible supply of "Natural Personal Optimism Gas," and to that extent what I say must perhaps be tempered or accepted with a few pinches of the "Salt of caution."

Personally, I would be satisfied to apply the story of the "recent" bridegroom (unaccustomed to traveling), compelled to make a trip; and the first "night out" was anxious to rededicate his undying devotion. So addressed a telegram to wife reading only: "L-O-V-E." Telegraph operator suggested as a matter of economy, a fifty-word Night Letter; so was handed a blank with "L-O-V-E" repeated fifty times. Yes, five hundred "O-P-T-I-M-I-S-M-S," would suffice. But for fear that the patience and intelligence of my readers, and the editors of *HARDWARE WORLD* would be outraged, I make the following general observation on the outlook for 1920:

First: Commodity Market. One year ago the question on every lip was: "Are we to have a boom period or one of business depression? Would it culminate in a panic such as followed the inflation of the Civil War in 1873, with subsequent years of depression?"

Factors affecting the situation in the interval of one year, causing a change from "mental commercial depression" into a renewal of confidence, courage and enthusiasm, are matters of record, which created the situation existing today, well summarized as follows:

The wheels of business are moving at full speed—perhaps violating the economic laws of Nature. Yet, the "tracks" are clearer than for months past. Unrest is reacting. "Co-operation" is at the throttle. A buying movement resulting from the return of the railroads to private ownership, is an "Iron and Steel" commodity consideration of importance. The Foreign Exchange situation, though having elements of danger in its relation to our domestic business, cannot affect it while "Demand" is so far ahead in the race with "Supply." When "Supply" closes the gap, making the race one with real elements of speculation—it is reasonable to assume that the Government, with the aid of "Business," will have found an Exchange solution that guarantees the United States a commanding position in International Commerce.

So much for Today—The "Spotlight" of tomorrow would light the "stage of business" with the following "prophecies," for which a well known Statistical Bureau is in a measure responsible:

A: Present conditions of "Demand" above "Supply." Likely to exist first half of 1920.

B: Second half of 1920 may witness a reaction.

C: Following this reaction—if it materializes—(a year later) from an unheard of era of prosperity will ensue, lasting from two to four years, which will make present Industrial Plants and housing facilities inadequate, and costs in preparation to meet such a condition may be well considered under heads as follows:

A: The wages of construction labor are not likely to be any lower next Fall than they are at the present time. Efficiency may be better.

B: The cost of building materials will be lower, but the percentage decline will be relatively small compared with the rise which we have just witnessed.

C: The cost of equipment will decline more than the building materials, but certainly not back to anything like the average cost of equipment in service today.

D: The rates for long term money will be lower as soon as the first real liquidation of floating credits has been seen, and it should be remembered that it will be especially dangerous to undertake any extensions now, if the financial arrangements are not all complete before the work is begun.

So that the "richness of the Optimism" of my words may not sicken, I am constrained to add a "seasoning" of caution, as follows:

First: Fundamental factors may make the latter half of 1920 a time for the exercise of our best faculties of courageous business management, intelligently applied. Such a reaction is almost certain to be of short duration, because of a real domestic and foreign demand for commodities. So the "psychology of fear" is our only danger, which the proper application of courage and intelligence will overcome; and even the temporary reaction, which may not materialize, but is yet a possibility, holds no elements of danger in the outlook for 1920.

In conclusion: Whatever happens, smile, because a recent speaker at the Chamber of Commerce said: "It takes sixty-four muscles to make a frown, and only thirteen to smile—so why work overtime?"

Don't be discontented because you have not achieved contentment. There is nothing less interesting than a perfectly happy, contented person. Even poets, story writers and novelists leave their heroes when they are presumed to have achieved happiness. Interest in them departs the moment they achieve the dubious blessing of bliss. It is the grappling, digging and hustling around after happiness which makes the day interesting enough to wake up for. It is the fleas which keep a dog actively interested in life anyway.

Chicks in the Window—Feather Your Nest

PLEASE don't be alarmed—the kind we refer to are of the harmless feathered variety, though quite alluring, for what can be more fascinating than fluttering, fluffy, downy little yellow balls—baby chicks?

Almost everyone unconsciously associates chickens with the Eastern season, probably because of happy childish recollections and impressions of Easter, wherein chickens played a prominent part. So it is safe to assume that a window filled with lively, chirping baby chicks will immediately attract and hold the interest of all the passing throng, young and old.

Simply as an attractive, seasonable window display, directing attention to your store, baby chicks will prove successful. And then there is the advantageous and practical viewpoint to be considered—the calling attention to a display of lines that are usually kept in the back-ground.

Assuming that the lively brood are of the modern, motherless variety, here will be an opportunity to display the incubator that supposedly hatched them. Of course brooders will be in evidence, also poultry netting, and all the modern sanitary “improvements,” drinking fountains, feeding troughs, etc., for their happiness and welfare. The larger hardware stores could furnish everything in the way of appropriate “stage settings” for the noisy little chorus.

Even Ducks or Rabbits

Where such a display would not be practical, an old fashioned Mother Chick-a-biddy and her

brood and some ludicrous, adorable ducklings, or even “bunnies,” thrown in for good measure, would prove very attractive.

Where incubators, brooders and “accessories” are featured, it would be a good plan to direct attention to these by neat display cards giving compelling facts and information regarding profitable poultry raising by these methods, especially in small areas.

City dwellers, possessors of thrifty souls and rear gardens, gazing on the scene, will immediately be seized with the desirability of raising chickens, thereby seeing an opportunity to combat the ever increasing H. C. L. They will see glad visions of the luxury of fresh laid eggs, for breakfast, and chicken, fried, roasted or fricasseed, occasionally gracing the dinner table. Truly the three ages of chicken are all equally desirable—on the menu.

Hardware merchants in the smaller towns should push the sale of poultry “equipment” by making an especial point of interesting farmers’ wives in these lines, for in many cases, “egg money” represents their sole source of revenue.

Three Chicken Appeals

When these women can be shown how a little expenditure and pleasant occupation on their part will result in an assured chicken income, they too will have glad visions. If they belong in the “broiler” or “fryer” age, we sadly fear their visions will be of rainbow-hued, vain, frivolous affairs—clothes—no doubt rivaling in splendor those of some departed city visitor.

AN EASTER DISPLAY SUGGESTION

A little live-stock in the window will often serve to liven up your store as well as your sales.

If she is of the staid, practical "fricassee" age, she will have happy visions of hurrying to your store for that long wished for new kitchen range which "John would never consent to buy," or a fireless cooker for the coming warm weather, or some electrical appliance that she has coveted for many a day, paints to brighten up the home, inside and out, and all those conveniences which add to the cheer and comfort of her household. All these dreams can be realized when she has her own assured income, and the purchase of an incubator will help solve her problem.

Speaking of problems and chickens, recalls to mind that perplexing, unsolved riddle of the ages—"What came first, the chicken or the egg?" And today, when chickens and eggs are so important in coping with that other problem of an economical and sufficient living, lucky is he or she who has none but chickens "laying" for him, and wise is the hardware dealer who will "set" his cap for the poultry raiser.

THE LAY OF AN EGG

(An Eggs-travaganza Dedicated to Hardware Merchants who Handle Poultry Supplies, by Kathryn L. Wood)

The hens of Cooper Hollow were holding a convention, Discussions of their native rights were heard with rapt attention;

When suddenly the order of the meeting was upset By the advent of the farmer in whose barnyard they had met.

"Your pardon, ladies," said he, "for this masculine intrusion;
My presence here was not designed to bring about confusion.

I come to ask a question in a serious frame of mind On a subject close to all the hearts of Cooper Hollow kind.

"In fact, it is our stomachs that it touches, and, you see,
Our purses are affected by it incidentally. This is why I dare to meddle in your personal affairs, Because of the reduction in the product of your wares.

"Not an egg have I discovered on this farm for many a day,
And I'd like to know the reason why you ladies do not lay.
Eggs-cuse my eggs-ercise of puns, but I eggs-pressly beg
An eggs-act eggs-planation of the eggs-it of the egg."

There was momentary silence, then, among the feathered flock,
The chairman of the conference, Madame Plymouth Rock,
Fixed her comb and cleared her throat, then rose to the occasion,
Addressed the speaker in behalf of all the congregation.

"You ask for our eggs-cuse why eggs are so eggs-tremely few,
And so it is eggs-pedient that I eggs-plain to you. The trouble is this latest fad, this craze of Chanticleer; The fuss and feathers over him is all that you can hear.

"It's Chanticleer where'er you go, from theatre to store—

Such 'eggs-aggerated ego' was never heard before.
That we hard-working hens should get so little commendation
And the conceited Chanticleer receive so much ovation.

Has caused us to eggs-postulate against this sad display
Of popular ingratitude and gross partiality,
And this discrimination in favor of the men,
We think a foul eggs-ample of injustice to the hen."

The farmer listened quietly, and when the speaker finished
He said, "So this is why my hen-fruit has diminished;
Because your jealousy has overcome your usual common sense,
You take eggs-ceptions to this rooster fad at my eggs-pense.

"All you have to do is just to lay around and set,
And still you kick on furnishing a single omelet;
Your eggs-traordinary reason for thus eggs-terminating
This eggs-cellent industry is quite eggs-asperating.

"My patience is eggs-hausted and there'll be an eggs-odus
Of hens from this vicinity unless you stop this fuss;
My eggs-chequer has fallen lately with a sudden drop,
My egg crop is eggs-tinct because you've something in your crop
That needs to be eggs-pelled with a strong eggs-pectorant.

A good, sharp axe would cure you, I'm quite confident;
To thus end your eggs-istence is a thing I hate to do,
But if you will not lay for me, why I will lay for you."
The hens looked at each other with significant alarm,
Then rose with one accordance and dispersed about the farm;

And, as they flew, the farmer heard Miss Cochinchina say:

"I am not chicken-hearted, but I must be on my way.
Of these eggless conventions I never did approve,
And when folks talk to me like that, I think it's time to move.

Did someone mention Chanticleer? Well, I should say I shall!

I've no desire to hang around to my own funeral,
I hear the call of duty from that haymow over there,
So please do not detain me, for I have no time to spare."

And Madame Plymouth Rock was heard thus to soliloquize:

"I think on this occasion it is best to compromise.
All this eggs-citing talk on this egg proposition
Has a tendency to sour that farmer's disposition.
I may not be progressive, but I'm willing to proceed
To follow his suggestions with eggs-celerated speed;
So I'll make an eggs-peditious eggs-cursion to the hay,
And life for me henceforth will be one glad eggs-tatic lay."

Moral:

One live hen on the nest is worth a dozen in the pot,
And one wishbone within the breast worth ten you haven't got.

THE DIFFERENCE

You can always judge a man by the way he looks at things. Some people see a problem ahead of them and say, "It's a hard job," they are pessimists. Others look at the problem and say, "It might be worse," they are optimists. Others look at it, tackle it and say, "It's done!" they are the do-its—and they are a great race.

Cultivate patience—it wins.

BEWARE OF GIVING PROMISSORY NOTES AS ACCOMMODATIONS TO FRIENDS

(Copyright by Elton J. Buckley)

I find by my own professional experience that there is a very general lack of understanding among business men, even those of long and extensive experience, as to the liability of a man who signs a promissory note as an accommodation to a friend, or a partner or a customer, or anybody, in fact. Only the other day, when I remonstrated with a client for making a very loose practice of doing that for his three sons, he argued with me that "he couldn't be compelled to pay anything out on such notes, as he didn't owe them."

The answer that I made to him and make to any reader hereof who is under the same delusion, is this: "It is true that you cannot be compelled to pay anything on an accommodation note by the person to whom you give it, but you can always be compelled to pay its full face to any person to whom the payee transfers it in good faith and for a good consideration."

If that were not so, you can easily see that an accommodation note would not be a loan of credit, as it is everywhere recognized as being.

All this is called up by the following letter:

Brooklyn, N. Y.

I have been in the above wholesale business at this address for about three years, and as I started with very little capital, I have had a hard struggle. For the last year, however, I have been going ahead and have made a little money and established a fair line of credit. I have a brother in the retail business and have been in the habit of helping him out by signing accommodation notes for small amounts, so as to allow him to raise money to discount bills, as my credit standing is somewhat better than his.

Last week Dun asked me for a new credit statement, and they insisted on my putting in my liabilities the accommodation notes which I had signed for my brother, which were unpaid. They said they would have to be deducted from my assets to get net worth. Is not this an error? I do not owe my brother anything whatever and merely signed the notes to help him raise the money.

E. W. B.

I could not have a better example of what I referred to in the first paragraph. Here is a business man who has been in the habit of signing accommodation notes and handing them out, in the wholly erroneous belief that they did not affect either his liabilities or his credit standing.

As a matter of fact, an accommodation note is just as much a liability as if he owed the money represented by it, for if it gets into the hands of a third party—it is practically certain to, because that is what it was given for—such third party can collect it, even though he knew, when he took it, that the maker didn't owe the money, but had given it merely as an accommodation. If that were not so, nobody would discount or take over an accommodation note, and it would at once cease to be the loan of credit it is intended to be.

Read the following statement of the settled law on the subject:

An accommodation note is a note to which the maker has put his name without consideration, for the purpose of accommodating by a loan of his credit, some other person who is to provide for the note when it falls due. It represents a loan of credit to the party accommodated.

The party for whose benefit an accommodation note has been made, acquires no rights against the accommodation maker, who may set up the want of consideration as a defense to an action by the accommodated party, since as between them there is no consideration, a fact which is always a defense to a suit on negotiable paper between the immediate parties, whether accommodated or not.

It is no defense to the enforcement of an accommodation note in the hands of one other than the party accommodated, taken for value and in good faith, however, that it was without consideration as against the accommodating maker * * * if the holder gets it before it is due * * * and this is so although the holder had knowledge, before the paper was transferred to him, that it was accommodation paper.

The maker of an accommodation note can be sure of not having to pay it, only as long as it remains in the hands of the payee, who of course cannot himself collect it. But it is certain not to remain in the hands of the payee, because he can realize nothing on it until it gets out of his hands. And the minute it gets out of his hands, the maker is just as liable on it as if he had given it for a bill he owed.

There is a difference between patience and passiveness; between a cheerful but soft answer and an over-humble, aggravating, self-righteous one. Don't mistake laziness for patience, or self-justification for justice.

AN ANCIENT OBJECT LESSON

(By S. E. Kiser)

Five thousand years ago, they say,
The Chinese had discovered things
That we are finding out today;
They had philosophers and kings,
And were enlightened, more or less,
When Greece was still a wilderness.

Three dozen centuries ago
The Chinese had erected walls;
They planted crops and watched them grow,
And utilized their water falls;
They had the lead—we cannot doubt it—
But failed to tell the world about it.

While white men still found homes in trees,
And had not fashioned axe or spade,
The records tell us the Chinese
Had learned to barter and to trade;
They had invented pen and ink
Before the white man learned to think.

Behind her walls old China grieves,
Her list of troubles growing long;
The wounds are deep that she receives
From nations that are new and strong;
But is her sorry state surprising?
She had no faith in advertising.

Congress of Retail Merchants Proposed As Means of Solving Business Problems

(The Following Address by Mr. Felix Vorenberg, a Prominent New England Merchant, Was Delivered Before the Boston City Club)

THE war is over, or, at least most of us thought it was on Nov. 11, 1918, when the armistice was signed, though we know now that there are at this present moment twenty-three nations more or less at war, and what is still more important, we know that in our own country, under the guise of peaceful agitation, we are facing conditions which are anything but peaceful.

Retail merchants, in particular, are affected, as they usually are, and we must give these problems careful consideration and prepare ourselves for whatever may come.

Retail Merchant First to Be Blamed

During the war we cheerfully responded to every call and were only too glad to be of service to our country, but whether at war or at peace, the retail merchant is always called upon; it does not matter if he is asked to subscribe money for charitable organizations or for civic promotions, he must be ready to please the unreasonable customer, as well as the more reasonable one, and he is sure to be the first to be criticized when anything goes wrong.

To be in the retail business means to hold open house, and to cheerfully stand the burden of the argument, no matter where it comes from. Despite all that, we are not complaining and we realize that the retail merchant is fast making his way into the confidence of the people, but the problems confronting us today are becoming so numerous and some are so serious that we must face them and prepare ourselves to solve them.

Surely Not An Exorbitant Profit

Now, what are these serious problems, and how are we going to solve them? Not very long ago the cry was heard—and still is heard—about profiteering, and, as usual, the retailers were first held responsible. The investigation of the Government, conducted by the Department of Justice, proved that out of forty-five leading department stores in this country, the average net profit ranged from $3\frac{1}{2}$ per cent to 5 per cent.

A meeting called in New York City by the National Retail Dry Goods Association not very long ago for the purpose of conferring with a representative of the Attorney General's office was attended by over three hundred merchants from all over the country, and it developed that all newspaper talk with reference to profiteering in retail stores had no foundation. In fact, I believe the Department of Justice became con-

vinced that retailers were not to be counted in the class of profiteers.

The retailer, unfortunately, is in the position where his cost and the selling price does not compare well with the cost and selling price of the manufacturer, because of the fact that the large overhead expenses of the retail merchant is out of proportion as compared with the expense of the manufacturer. A plan, therefore, ought to be adopted by all mercantile organizations to establish a cost price which will include the overhead expense, and will, therefore, be the actual cost. Such action has already been advocated by the retail board of the Boston Chamber of Commerce.

The next problem is the all-important question, "the market conditions," and what the retailer should do to protect himself. Is merchandise going up in price or is it going down? Will the seller continue to dictate terms, or will the tide turn, and if so, are we going to live a more normal business life?

Here and there you hear a whisper about prices having reached the peak, but the majority of buyers and sellers are looking toward a still further increase and a condition which will make merchandise more scarce. Can conditions change under the present supply and demand of the market.

My own humble opinion, based upon personal experience as well as upon the opinion of many prominent business men, both bankers and merchants, is that there will be a change in market conditions and that the change will be for lower prices all along the line.

Whether it will come through Government pressure or through money conditions, or through a standpoint policy against wage increases, or whatever the reasons may be, is of no importance, as far as the results will be concerned. I am convinced, therefore, that the merchant, with a reasonable stock on hand and with reasonable commitments for the future will be in a much stronger position than his gambling competitor.

The position of the retail merchant today is not unlike the skipper who finds himself in mid-ocean, commander of a splendid ship and surrounded by experienced men. He knows exactly where he is and where he is going, but he is confronted with a dense fog impossible to penetrate; his movements are apt to spell danger whichever way he turns.

I am not pessimistic in drawing this picture so vividly as I have—quite the contrary—I am

optimistic to a fault and I believe that the country, with all its wonderful resources, and the people with their great will power and their desire to adapt themselves to all circumstances, will finally produce a situation which will lift the fog, so as to allow us to see the sun, bright and clear, and with it all the beautiful sides of life, but what are we doing to deserve the full light and the warm rays of the bright sunshine?

Retail Merchants Congress Needed

What do we need and what do we want? I will tell you what we want and that is the keynote of my message: There are today all kinds of organizations, such as yours and many others—clothiers' associations, shoe retail organizations, hardware organizations, jewelers' and fancy goods' associations, retail trade board, chamber of commerce, retail dry goods' association, each having an organization of its own and each doing a certain amount of good.

But what we need today is not merely an organization to furnish one or more dinners to its members, but an organization that will be connected with the other merchants all over the country. Such an organization will not work to oppose organized labor, but will help both employe and employer to grow up together, to like one another and solve together the problems they encounter, and so what I suggest is nothing more or less than a National Retail Merchants' Congress, based or founded upon the principles of our own United States Congress—an organization to consist of representatives from every line of merchandise as represented in retail stores, and which will be so powerful that Congress or the state legislature cannot ignore it.

It would take too much time to go into detail this evening, but you can see in a moment what I have in mind. Merchants in every line would be represented at this National Retail Merchants' Congress by members of their own organization and powerful influence for good could be brought about by such an organization.

Lawyers, Politicians, Professors and Theorists in Control

Why is it that the President of this country and the occupants of other important national positions are usually chosen from the law profession? Is it due to the fact that business men do not want to go into politics, or is it due to the fact that they are too modest? Or is it due to the fact that they have not received enough encouragement to manage the affairs of their country?

The Retail Merchants' Congress would offer a sufficiently strong background to nominate its own candidate for such an office and its endorsement would have a strong following all over the country. Why not pledge ourselves this evening to organize, not for the purpose of protecting selfish interests, but for the purpose of protecting law and order.

Let us interest ourselves in the affairs of our city, of our state and of our nation, using always the same calm judgment which we are now employing in our own business. Let us realize that it is more important to construct than to find fault.

Let us forget all racial and religious prejudices and establish instead a genuine brotherhood of man, for the benefit of men, and let us always remember that he who works for us—even though he may not have the same education we have had—has, nevertheless, a human heart beating under his shirt, and let us understand, too, that the man who works for us, not only with his hands, but with his head and his heart, is the man we want, and, finally, let us realize that no matter where we come from and no matter who our parents might have been, the only one deserving any credit at all is the one who has done something worth while by himself.

In that spirit, let us celebrate the memory of the greatest American who ever lived, the finest character ever produced—the immortal Lincoln, and in his spirit "with malice towards none," let us start a movement which I am sure will help us solve many of our problems and which will bring closer together every merchant of the country and every human being connected with him in his various enterprises.

BUY AMERICAN MADE CUTLERY

There are a matter of two hundred cutlery manufacturers in this country and they have done good work during the war. When Europe fell down on the job of making our cutlery the American cutlers came to the rescue and made everything that the American nation wanted, from razor blades to the large carving knife. When we finally entered the war, the American cutlers were ready to give to the boys what they needed, bayonets, pocket knives, razors, scissors and surgical instruments, as the orders came from the war department.

The American cutlers now believe that they have done their duty and that they have shown that this country can very well make a knife as good as any other. They are out to prove it to the nation. There is an American cutlery industry as good as that of England and Germany, and Uncle Sam can have an American knife whenever he wants. American cutlers will not rest until every American man has an American knife and razor, and every American woman owns American scissors. The best cloth cutting shears of the world are known amongst foreign tailors to be of American make. It is high time that it should be also known to American tailors.

Short cuts are all right in your methods, but never cut short on the quality of your work.

THE RIGHT TO IMPOSE EXTRA TAXES ON BUSINESS MEN

(Copyright by Elton J. Buckley)

I have a letter from a large Cincinnati merchant asking me what the legal power of a city or town is to levy all manner of taxes on the local business interests. He states that since Ohio has gone dry much revenue has been lost and is being lost, and to get it back, almost all the towns and cities in the state either have imposed or are preparing to impose extra taxes on the business interests. He asks me to say what restriction or limitation there is upon the right of a city or town to do this.

The question is live and I am glad to discuss it, for it is decidedly of general interest. Every section which had been wet, has lost a lot of revenue. This revenue had been devoted to governmental expenses, and being needed, it must now be raised elsewhere. Apparently the favorite method is to get it out of the business interests in the form of special occupation or business taxes.

The opponents of prohibition used as one of their chief arguments the fact that it would make taxes higher. The proponents of prohibition, on the other hand, contended that prohibition would make taxes lower, because it would eliminate many public expenses which liquor is responsible for.

Both are doubtless right. Until prohibition has a chance to get in its work taxes will undoubtedly be higher. After it gets in its work, the experience appears to be that taxes and many other items of governmental expense become lower.

In my reading I have seen reported many cases where towns or cities have recently imposed new occupation or business taxes upon their merchants. I recall an ordinance in St. Louis, Mo., taxing every dealer in soft drinks \$100 a year. I recall a similar ordinance in Los Angeles, Cal., taxing all businesses various percentages, ranging from \$12 per year on businesses doing less than \$5,000 a year, up to \$500 per year on businesses doing from \$400,000 to \$500,000. The City Council of Los Angeles frankly states that the tax is made necessary by the loss of liquor revenue. In both places the merchants are protesting, but the chance is that the tax will stand, or that some tax will, in any event.

In thousands of other cities, towns, villages, boroughs, etc., the same thing is being done or will be done, and it will be interesting, therefore, to discuss what right the imposers of these taxes have to do it, and how far they can go.

Within certain limitations, almost any subdivision of a state, meaning a country town, borough, etc., can impose an occupation tax, a business tax, or a mercantile tax, upon its business men, regardless of whether they are manu-

facturer, jobber or retailer. The right to do this is derived from the state. The original taxing power rests with the state and unless the state, by the passing of some law, hands down its right to tax its subdivisions, such as county, city, etc., such taxes cannot be imposed by the subdivision. That law, however, is practically always passed, so that almost any town, or borough, or county can today impose these taxes. Cities, too, though they may derive their power to tax in a different way.

There is no limit as to the kinds of business or occupation which can be taxed under such a power. The gross receipts of a wholesale clothing dealer, or a retail grocer or a dentist, can be taxed alike—and all other occupations and forms of business. As a matter of fact, such taxes must be uniformly upon all occupations. It would not be legal to tax hardware dealers and nobody else, though hardware dealers and nobody else might be licensed.

So that the first restriction is uniformity. The second, and the one most important to us just now, is reasonableness. Occupation or business taxes must be reasonable. Under the guise of obtaining revenue, a tax must not destroy legitimate enterprise. On the face of it, it looks as if the St. Louis tax of \$100 on soda water dealers might be bad, because it would doubtless put a lot of dealers, with whom soft drinks were a small side issue, out of the business.

No occupation or business tax must be so high, either, that it will amount to restraint of trade. It could easily amount to that if it was so high that only a few large dealers could afford to pay for it.

Another restriction is that any tax imposed on occupations or business must apply the same to residents and non-residents. The courts have repeatedly decided that it is illegal for a local council to protect the local business people by putting a tax on outsiders who came into the town to do business. The tax must bear on the resident and non-resident alike. And if it is an attempt to tax business coming into the community as part of interstate commerce, it is wholly illegal.

The law allows local communities to go pretty far in taxing their business men. Even though a business has already paid a tax, as for example, by paying a tax upon the material that enters into it, an occupation tax is nevertheless legal.

An occupation tax is any business tax, such as upon a business man's gross receipts, or his aggregate purchases, etc., his profits, etc.

The reason most men object to going to a rummage sale is because they hate to see the suit they once paid \$50.00 for sold for a dollar and a half.

STATUS OF SELLER WHO WOULDN'T DELIVER AN ORDER UNLESS THE BUYER PAID TEN PER CENT MORE.

At times I feel a great deal of amazement at the exceedingly loose way in which the wholesale business in almost all lines is conducted, particularly in the treatment received by orders for goods. A seller will take an order without qualification, but when delivery time comes he calmly refuses to deliver, on any one of many grounds, none of which is a legal ground.

And the buyer usually takes it calmly. Grumbles a bit, perhaps, but doesn't dream, in the average case, of instituting proceedings to get his rights. My observation is that this cavalier treatment of business orders is more often administered by sellers than by buyers. Buyers often default on their orders, of course, sometimes for fraudulent reasons, but not so often as in the sellers' case, because the buyer who defaults knows that he will probably not be able to get away with it. The seller, on the other hand, is pretty sure he will be able to get away with it. And as a matter of fact, he does.

A case has come to me which enables me to supply an illustration of the coolness with which many sellers throw over their legal and binding contracts to deliver goods. In the case referred to a retailer placed an order for goods during June, 1919, delivery to be made on or about October 1st following. The order was taken by the seller's authorized salesman, was accepted by him, and was forwarded by him to his firm and accepted by them.

On September 19, 1919, the seller sent to all his customers the following letter:

September 19, 1919.

Gentlemen—We have recently been compelled to advance wages to our workmen and also grant shorter hours, which means a larger expense in production. We had hoped to go along this fall without making any advance, but this condition forces us to the following proposition to you: We will fill all orders we possibly can to October 1, 1919, and after October 1st any unfilled orders will be subject to an advance of 10 per cent or cancellation. This makes it fair to all, and is the only way we can see to be absolutely fair. Wishing to be fair to you as well as to ourselves, we have concluded that the only thing to do is to make the advance take effect October 1, 1919. This is your official notice to that effect. You will please let us know by return mail if this is agreeable to you and if we shall fill your order under these terms or cancel same. We shall use our best efforts to fill what orders we can before October 1st, but cannot guarantee same.

Thanking you very kindly for your co-operation in the matter and assuring you that in the event of lower prices on our goods we will gladly give you the benefit of same, and trusting to hear from you by return mail as to what disposition to make of your order in the event that same is not shipped by October 1st,

We await your reply and remain, Very truly yours,
I. C. G. CO., Inc.

Consider for a minute the hardihood of this. When this seller accepted the retailer's order a binding contract was created, binding the seller to deliver and the buyer to accept, certain goods

at a certain time at certain prices. Now comes the seller, having decided that filling his contract was not profitable, calmly concluding not to fill it. Yet nothing is more settled in law than that one party to a contract may not violate it without the other party's consent. Only with the buyer's consent could any such stand be taken, but the astonishing thing is that in most cases that consent is freely given, if not expressly, then by failure to do anything.

The buyer in the case under discussion did not agree to pay the 10 per cent advance, but after he received the letter he called for shipment of his order. The seller thought this tantamount to an agreement to pay the advance, and on November 11th the goods went forward. Now, the seller is demanding that he pay \$65, representing the 10 per cent advance on the order. The buyer's question is, "Am I liable?"

My answer is that he is not. The seller had no right to take the position that unless his buyers, whose orders he had accepted, paid 10 per cent more, he would cancel their orders. Any buyer could have refused to allow such a thing, and could have served notice that he would demand either the goods or damages for their non-delivery. Since the position taken was wholly illegal, the buyer had the right to ignore it and to keep on demanding his goods, and his doing so after the notice of the 10 per cent advance was not an implied agreement to pay it. He is not, in my judgment, liable for another cent.

Now in this case the buyer got his goods and is now defending against a demand to pay \$65 more than the contract price. Of course in such a case any buyer would defend. But what about the other buyers from that same seller, probably numbering several thousand, who did not get their goods and who were therefore confronted with the seller's demand, "Pay me 10 per cent more than I agreed to deliver the goods for, or I won't deliver at all." What did they do? Without knowing anything about it, I would willingly wager that not one of them held the seller to his contract. The thing has become so common that buyers take it as a matter of course.

Here is a firmly settled principle of law which it is well to remember when up against such a situation: When a man accepts an order without condition or qualification, he can be compelled to deliver or to pay damages for not delivering. The damages would be the difference between the contract price and the market price on the day the delivery was refused, and at the place of delivery. And if, as in many cases, the order is taken subject to expressed conditions like fire, strikes, etc., then the reason for non-delivery must come squarely within those expressed conditions or the seller has no more right to default than if there had been no conditions at all.

SALESMEN'S REFERENCES

The credit man in any house appreciates it when the salesman sends references with each order. Especially is this the case when the order is from a customer who has never asked for credit before. When the salesman has procured the references, he has done his part. It is not necessary for him to look into these references. His credit department will do this in their own way. The credit department has its ways of doing this and besides it is not the duty of the salesman to do so.

There Are Two Ways

One way is to ask the customer, straight out, with whom he is doing business. This is not considered the best way to obtain references, because, very often, the customer will name only those houses that he is treating right in a credit way. You know there are some customers who will treat a house or two right, just for the purpose of using them as references when they desire to open up an account with a new creditor.

Another way, and it is considered the best way, is to use strategy in getting the information you want regarding the names of the creditors of the customer you are selling. By carefully guarded questions you can bring your customer to tell you what you want to know, without exciting his suspicions. While you are waiting about his store or shop, you can easily observe the stock he carries. Perhaps you are in his office or near his desk where he has his records and, without attracting his attention, you can easily observe the names on invoices or statements that are hanging or lying around. Boxes, bales or other packages may be standing unpacked on which the name of the shipper will show. Mental notes of these names can be made and later placed on your order sheet that goes into your house.

Keep Your Eyes Open

When you go to the railroad station to catch your train, if you have a few moments, look around you to see if there are any goods that have come in. Some of these may be for one of your customers and the name of the shipper will show on the package. Even though none of the packages may be for your customer, if the name of the shipper proves to be that of your competitor, you will know that he has a representative calling there and is likely to know something about your customer who is also probably his customer.

The Salesman's Job

The salesman's job is to get for his credit department, good dependable references. It is as much to his advantage to obtain this kind of references as it is to the credit department of his house. Good salesmen and good credit departments are the keystone upon which successful business rests. Good credit departments

will demand that salesmen obtain proper references; good salesmen will see that these references are obtained in the proper way.

If you make your cheaper grades of goods a feature and display them as handsomely as the better grade goods, you will encourage the purchase of cheap lines at the expense of better.

SOUND ADVICE OF WESTERN MANUFACTURER TO THE TRADE

Conditions affecting the Roofing industry and allied lines are abnormal and puzzling in the extreme. On the one hand the demand from the trade is larger than ever before and greatly in excess of the ability of manufacturers to supply. On the other hand, raw materials are very scarce—almost unobtainable, with prices at unheard of levels. Rags for example are now selling at \$85.00 per ton, an advance of \$30.00 per ton during the past six months.

The situation in the East is even more acute than on the Pacific Coast, some manufacturers having advanced prices three different times during January. Others have withdrawn prices entirely. Others have called in their salesmen, while a number are booking orders only for shipment at their convenience and at prices in effect when shipment is made. These Eastern conditions are already being reflected on this Coast in the form of a greatly increased demand, and with advancing prices on the part of some manufacturers.

As to the advisability—indeed the necessity—of keeping prices down in general, there can be no argument. We, in common with thoughtful and patriotic citizens everywhere, recognize that prices cannot go higher without extreme danger.

How to meet the situation is the great question. Anticipating, in some degree at least, the conditions that would follow as a result of the restriction of building during the war, this company practically rebuilt its roofing plant at a cost of more than a million dollars. These improvements increased its output over 100 per cent, making it today the most modern, the most efficient and the largest single roofing plant in the world.

As a result of these increased facilities, our manufacturing costs are considerably lower than those of most manufacturers. Because of this fact and our sincere desire to assist in stabilizing prices generally, it is our purpose not to take advantage of prevailing conditions to exact the limit in prices. In other words, we will give our customers the benefit of our increased facilities and the stocks of raw materials which we have on hand, and will advance prices only when our present large stocks are exhausted and we have to replace at still higher prices.

In the meantime, we advise our customers not to speculate, but to buy to cover their immediate requirements only. If the building in sight in your city or community indicates a demand on you during the next three months for 100 squares, 500 squares, or a carload of roofing, buy that quantity and no more, but place your order now to insure delivery of the goods when you need them.

We urge also that our customers in turn do not attempt to secure from their customers the highest prices obtainable, but that they be satisfied with a fair and reasonable profit, because, in our opinion, it is only by so doing that our mutual interests and those of the country at large can be conserved.

Yours most sincerely,

THE PARAFFINE COMPANIES, INC.

B. J. Williams, Director of Sales.

Work is the first economy of nature. Vegetation grows; water runs; the sun shines. Idleness produces only stagnation and decay. Work is the vital spark of the universe. It is the elementary principle of civilization. Work is the prime essential in the world today. It is the unfulfilled demand for workers that is producing the present agitation and adding to the intolerable burden of high prices.

ENTERPRISING OKLAHOMA MERCHANT'S METHOD OF ADVERTISING

The Lamm Hardware Company, of Afton, Oklahoma, have sent us copies of their advertising, which they do quite extensively. They tell us that they run their advertisements in their local papers, changing them each issue, and after the advertisement is run and before the form is knocked down, they have them struck off on sheets, using both sides of the sheets with different forms, and every two weeks they mail out these sheets to their customers. In that way they keep virtually a catalogue of their merchandise, especially seasonable goods, continually before their customers and they have found it a very effective method.

We commend this method to other merchants as being worthy of emulation.

REWARD ACHIEVEMENT

Have you ever noticed the eagerness with which a man enters into his favorite game, no strain, no effort, no fatigue—only time or a necessary limitation finishes the game.

Apply this principal to your employes. Do everything you can to make their work a pleasure, a game, and then offer sufficient reward for the highest achievement, beyond the mere receipt of wages.

FOREIGN HARDWARE INFORMATION

The National City Bank of New York prepared a special booklet dealing with America's foreign trade in hardware. The booklet was written by Oscar P. Austin, the bank's statistician, and contains, aside from an analysis of this country's foreign trade in hardware, a valuable series of tables showing what countries consume the greater part of our hardware exports, for what articles foreign demand is increasing, for what ones this demand is decreasing, and the value of the many items of hardware we send into foreign markets each year.

The bank will be pleased to send a copy of this booklet to any hardware dealer or manufacturer.

PRACTICAL XMAS GIFTS

 <p>Famous Keen Kutter Edges</p> <p>Call and examine our line of the famous KEEN KUTTER Tools and Cutlery today. They cost no more than the ordinary kind. The above announcement shows a few of the items sold by up to date hardware merchants. It will be seen how these enterprising hardware merchants are really the housefurnishing dealers of the community.

How to Promote Good Will in Business

A Valuable Asset to Every Merchant

GOOD WILL is an exceedingly difficult asset to measure, to weigh or to appraise. It is such an intangible product that often its very existence is doubted by the business man who sticks too closely inside his own four walls, and who does not get out enough among people to appreciate the heart-warming, favor-compelling influence of good will.

If a customer presents himself before a retail dealer, for example, and asks for a particular kind of a brush, and that brush is not in stock, and something much better is shown and sold, the process is described briefly as "good salesmanship."

But, on the other hand, if the customer evidently wants the one kind of brush he has asked for, and none other, and the dealer says, "I haven't it, Mr. Brown, I am sorry. If you can wait a couple of days, I will order it especially for you, or, if you are in a hurry, I think it entirely possible that you may find it down at Smith's, on the next corner below. Wait a minute and I'll telephone and ask him if he has any of that make of brush in stock." The telephonic inquiry reveals that Smith has the article wanted, and Mr. Brown goes down there and gets it. He has not made a purchase of the friendly dealer, but he has accumulated a measure of genuine good will toward him and his service.

90% Business Result of Good Will

Just how much is good will worth in the retail business? Probably no one has ever been able to estimate this accurately, but it is true that the retail dealer comes very closely in contact with the customer either personally or through his associates and the opportunity for building up good will and establishing the right sort of relationship with his buying public is practically unlimited. If it could be expressed in terms of percentage, it seems safe to say that we could make the broad statement, without fear of contradiction, that 90 per cent of the business done, is the result directly or indirectly of good will.

An instance comes to mind which illustrates this very forcibly. A store was well established in a thriving small city. Its owner had made a fortune in it, and people from all over came to this particular corner store. The fixtures were old fashioned and few changes had been made of any kind for many years. Yet everyone knew that they could go to the Old Hawley Store and feel thoroughly at home, and be welcome, whether they bought or not.

Two stages from rural districts met at this corner, and it was not unusual to see a crate

of chickens, or a basket of vegetables in the corner waiting its claimant.

The good will of that business was worth many thousands. People could come there and get what they wanted without fear of over-urging or substitution. In time the aged proprietor died, and the heirs of the estate sold out the business to an enterprising firm, who came in, completely re-fixtured the establishment and began to cater for business in a aggressive way. The new floor did not welcome the chicken crates as had the old wooden one, and customers no longer felt at home.

In six months the new management was in financial difficulties. They had the location, the equipment and the stock, but they lacked that important item—good will. In the course of time, and a relatively short time, a closing-out sale was had, and even then people were wary of the "bargains" offered.

Then a third man came, bought up the stock, and said, wisely: "I must win what Mr. Hawley had, and which his successor had not—good will. He set about it by joining clubs, by taking part in public spirited enterprises, by courtesy, interested services, and by such promotion means, has, in two years, built up an invaluable business.

According to statements compiled by a very large and nationally known wholesale firm, 70 per cent of the goods which the retail merchant handles and sells, depend upon the good will existing between retailer and manufacturer. That is to say, if the retail dealer has placed before him two, three or more lines of goods of about equal excellence he will naturally choose to buy and to offer for sale those of the firm for which he has the most kindly feeling. Many a time a retail dealer obeys this impulse without analyzing it. He argues that he has always carried this line of stock; it has been satisfactory; the manufacturer has treated him white, and he feels obligated to show reasonable loyalty.

Difference in Salesmen

Not long since a dealer in hardware and accessories was ill. During his absence from his place of business two traveling salesmen called to see him. One went directly on his way, as there was no chance of doing business. The other one traveled on the same train, but before he boarded the train, he looked up the residence address of the ailing dealer, and that night he wrote a friendly letter of sympathy and kindly expression and mailed it. There wasn't a mention of business in it. When the sick man got it he was much pleased, for the calls of the two

salesmen had been reported to him. Next trip the good will established by the man who took pains to write the letter landed an order for several thousand dollars' worth of goods.

If it is true—and there seems no reason to doubt it—that 70 per cent of the selection of goods by retailers themselves is influenced by good will, then surely 90 per cent of retail sales are influenced by the same factor.

Are You Building Good Will?

Mr. Business Man, have you ever thought about this in connection with your own business? What are you doing to establish good will between your own establishment and the public? Are you impressing upon your employees how important good will is?

Are you watchful of telephonic tones; the particular manner of receiving and handling complaints; the type of service you are offering? Is this service merely perfunctory, or is it rendered cordially?

Are you separating and analyzing your custom, so as to determine just how to obtain the good will of your different classes of patronage?

Are you one of those individuals who rather doubts the existence of what he cannot see and touch—if so, what about electricity, good health, good spirits and good nature?

Are you wondering why business is not quite as brisk and why it does not increase as rapidly as you would like? If so, consider the tremendous business-building possibilities of good will.

Get a good location; procure the right sort of equipment for doing business with; stock carefully chosen goods; build up a strong, efficient organization; advertise wisely and concisely; be economical without being stingy; never misrepresent, for that undermines confidence, and confidence is essential to permanency. But with all thy getting, get good will.

WORK—LOYALTY

If you work for a man, in Heaven's name work for him. If he pays you wages that supply your bread and butter, work for him, speak well of him, stand by him, and stand by the institution he represents. If put to a pinch, an ounce of loyalty is worth a pound of cleverness. If you vilify, condemn and eternally disparage, why, then resign your position and when you are on the outside damn to your heart's content. But as long as you remain a part of the institution, do not condemn it. If you do, you are loosening the tendrils that hold you to the institution, and when the first high wind comes along you will be uprooted and blown away and will probably never know why.

—Elbert Hubbard.

Keep your eye on the man who is always trying to hand you a lemon.

MERCHANTS WHO SELL ELECTRICAL APPLIANCES SHOULD KNOW THESE FACTS

The fundamental principles underlying all modern electrical theory and measurement are formulated in what is known as Ohm's law. This law indicates the relation between the current flow, the electromotive force or pressure, and the resistance, in an electric circuit.

Ohm's Law and the Fundamentals of Electricity

The most important thing to know about an electric current is the rate of its flow. Just as the rate of flow of water is measured in gallons per second, so the rate of flow of an electric current is measured in amperes. A current of 10 amperes consequently means that 10 quantity units of electrical current pass a given point in the circuit every second.

The electrical pressure which forces the current through the wires is measured in volts, just as water pressure is measured in pounds per square inch. The electrical pressure is also called the electromotive force, or E. M. F.

Electrical resistance is measured in ohms. Resistance is that property of a circuit, or any portion of it, which obstructs the flow of the current. Electrical resistance may be compared to the opposition which a rough pipe offers to the flow of water through it.

Resistance is the property of the circuit itself or of any part of it, such as an incandescent lamp, an electric heater or an electric iron. Consequently, while the current and the voltage of a circuit may change, the resistance ordinarily does not, but remains the same.

The relation between current, pressure or E. M. F., and resistance is expressed by Ohm's law thus:

The current equals the E. M. F. divided by the resistance. Or what is the same thing:

Amperes equals volts divided by ohms.

We can also state it:

Volts equals amperes times ohms.

Or: Ohms equals volts divided by amperes.

Electric power may be defined as a rate of doing work produced by electricity in motion. The unit of electric power is that which is required to drive one ampere by a pressure of one volt. This unit is called the watt. In direct current circuits, and for Mazda lamps or heating devices on alternating current circuits, the number of watts equals the volts times the amperes.

THE THRILL OF THE JOB

"It is the deadly monotony of it—" the same thing over and over again—"

This is what you hear when a man is tired of his work. He has lost interest in his work. We all do it at times. Why?

We lose interest in our work because we fail to take interest in it.

This is the Big 3 for 350 Year for Benjamin No.92 Two-Way Plug

The Quality Plug

The Benjamin No. 92 Two-Way Plug is the pioneer double-socket device in the electrical field. From coast to coast it has become a fixed standard in the public mind. It has been so firmly accepted that today it is one of the greatest sellers in the industry. Your own 1919 experience tells you that.

But *this year* we're going to get the story over bigger and better than ever. At the top of this page are some of the photographic illustrations being used in the No. 92 Plug advertisements for 1920.

See how the illustrations tie right up with the sale of your Electrical Appliances. Advertising like this opens the way for appliance sales that have been put off because the prospects felt they had no place to connect them.

The strongest, most popular publications—those dominating the field in which they circulate—are again the chosen mediums to carry a series of graphic, convincing stories on the No. 92 Plug direct to your customers.

Every year is a stronger electrical year than the one before it. Jobbers: Are you ready for this, the biggest 3 for \$3.50 year in the history of the No. 92 Two-Way Plug?

Dealers: Ask your electrical jobbers.

BENJAMIN

Makers of Things More Useful

OWING to the scarcity of domestic labor and the exorbitant wages asked by those who will "condescend" to enter domestic service in these days, the housewife is faced with a serious problem. This, then, is the very best time for pushing electric household conveniences, either for lightening the labor of the mistress of the home, or as a means of attracting desirable servants.

Electrical merchandise is going to be one of the most profitable lines of the future, and the hardware man who has hitherto been exploiting coal ranges and hand power washers would do well to install a line of electric equipment at once. This does not mean, of course, that there will not be a demand for the lines he has in stock at present, for many homes are not equipped for the use of electric appliances—but new homes are being constantly built, and older ones wired, so the hardware man should get into the band wagon, and blow the electrical horn for all he is worth.

Advertising should have a direct appeal, and it should be written in a manner to attract the average householder. Barker Bros., Los Angeles, Calif., recently had a Laundry Helps Sale, and heralding it, they said:

**"A WOMAN'S WORK, GRAVE SIRS,
IS NEVER DONE."**

The least we can do is to help make her work easier, to lighten the labor that household work involves. How often have you heard the old saying, "A woman's work is never done."

So many women are doing the work that a machine can do better, and easier and quicker—washing and ironing for instance. It is NOT economy to wash and iron by hand in this day and age.

The electric washer and wringing machine SAVES a woman's health; SAVES the clothes, clothes, which is quite an item in these days of expensive fabrics; and SAVES laundry expenses—which figure alone will soon pay for the machine.

See the Electric Washer, Ironer, Wringer and Range demonstrated at our big

**ELECTRIC LAUNDRY HELPS SALE
BARKER BROS.**

One of their windows was devoted to featuring this line. In the foreground was an electric washer and wringer, while diagonally across the room extended a clothes line to which, by wooden clothes pins, were fastened a number of white wearables—handkerchiefs, aprons, stockings, shirts and pillow slips—on each garment being printed in black letters a catchy phrase:

"The hard maple cylinder is easy on dainty linens."

"Push a button and the machine does your work."

"Two cents per hour is the cost to run it."

"No red hands or tired back if you use an electric washer."

"The electric washer solves the servant question."

"Washing done before ten o'clock."

"Your time is too valuable to waste over a washboard—Get an electric washing machine."

The sort of electric appliance window that makes sales for the Electric Supply and Constructing Co., at Vancouver, B. C.

Hotpoint

The Ladies Home Journal

This kind of advertising keeps Hotpoint Irons moving from the dealer's shelves.

During April a beautiful four-color page in the Ladies Home Journal and a strong two-color page in the Saturday Evening Post will be read by millions of people. Every month these publications carry a Hotpoint message.

Record Hotpoint Iron Sales!

Backed by this national advertising, the demand for Hotpoint Irons will be greater than ever. Be ready—replenish your stock—when Mrs. Jones wants a Hotpoint have it for her—see your jobber **now!**

These ads displayed in your windows will tie your store in with our national advertising.

EDISON ELECTRIC APPLIANCE CO., INC.
Chicago

New York

Ontario, California

Atlanta

A big card in the corner suggested: "Be sure to visit our model electric laundry inside."

Outside the store there was a big red circle painted on the pavement, within which was printed "Buy an Electric Washer, Wringer, Set of Irons, Ironing Machine, or Range at our Laundry Helps Sale." A trail of red paint ran from the circle to the baseboard of the window, up the baseboard and glass to a circle on the pane, in which was printed: "Two dollars a week pays for this great modern convenience." Inside the show window a red ribbon ran from the circle to the electric washing machine.

Show Them the Whole Store

By placing the laundry exhibit well to the rear of the store it was necessary for the visitors to pass many shelves and counters on which hardware of all kinds was attractively displayed. In this way many people entering the store for the first time saw something that caught their fancy, and even if they did not purchase at the time, made a mental note of it for future reference.

Everything in the electric laundry was spotless—the electric range, washing machine, fan for drying the clothes, the wringer and irons. The floor was covered with linoleum and in the wall was set a window with white curtain and a box of hardy geraniums. At certain hours of the day a demonstrator showed the use of all the merchandise, and the intimate, practical way in which these conveniences were exploited made it seem like stepping right into a neighbor's kitchen—with the result that each woman who saw them felt an instinctive desire to be possessed of them.

The Electrical Supply and Contracting Co., Vancouver, B. C., featured the electric washer as an aid in overcoming the shortage of laundresses in a very effective manner. Pasted on the window was a semi-humorous clipping taken from one of the daily papers. Around it they drew a broad red circle:

CITY SHY ON WASHERWOMEN

In Consequence, Many Home Tragedies Are Brought to Light

Washerwomen in Vancouver are as scarce as hen's teeth. The loss of this valuable member of the community is causing many tragedies in domestic life. Stores are doing a tremendous trade in paper napkins and tablecloths—as many women have adopted these substitutes for table linen until Dinah or Hulda comes back to the wash tub.

A ribbon ran from this notice to a card down front:

Why wait for the washerwoman to return?
Get an Electric Washing Machine and Wringer, and be independent of the undependable washwoman.

Small cards close to the glass followed up the suggestion of an electric washer vs. washer-

Imagine the effect of this window of the Electric Construction Co., Cleveland, Ohio. There was a brilliant color contrast of green, blue and white.

woman: "Let the Blank washer become your washwoman—always on hand and always cheerful." "An Electric Washing Machine will save you all the troubles and worries of wash day and will always be on hand when wanted," and "The Electric Washing Machine does not require three meals a day, and does not ask for car fare."

Display Without Special Sale

For a dealer who did not care to hold a special sale and yet wished to call his machines to the attention of the public, a display such as was arranged by the Electrical Construction Co., Cleveland, Ohio, would prove very effective. The floor was covered with green felt, and a tall white frame had grey panel, in front of which sat a palm. Tall posts were wound with sky blue paper which bloomed out into fan shape at the top, and blue ribbons connected the different posts.

An electric washer of grey had a mirror behind it, tilted at an angle that permitted a view of its interior to be seen. Small cards of white, lettered in blue, were set about, each bearing a statement regarding one of the good points of the machine. The brilliant contrast of blue, green and white caught the eye of all who passed, and the little cards acted as very effective silent salesmen.

CLEANING GREASE OFF METALS

It seems a simple matter to wipe oil or grease off unpainted or unlacquered metal surfaces, but those who have tried it know it is not; it doesn't come off clean. Druggists sell an article known commercially as acid dip that will take off grease and leave no streaks, stains or smuts. This is especially well worth knowing by those whose duty it is to keep polished metal surfaces clean and bright.

Stanwood Products

Are you ready for the Spring demand for automobile supplies? Most every motorist who will not be able to obtain a new car, owing to the scarcity, is going to dress up his old one. And most every new car owner is going to make his car complete.

A heavy demand for motor accessories is predicted. Merchants are now making preparations to meet it.

Stanwood Products always have been good sellers. They are carried by all responsible jobbers. Have you placed your order?

Stanwood Safety Step Plates for mounting on running boards prevent slipping when entering or leaving the car. They are made in several styles:

Type C consists of a perforated steel base, rubber covered with projecting solid rubber ribs. Fitted with screws, nuts and lock-washers. Price, each, \$1.60 list.

Ford Type, same as Type C, but made to fit Ford running board. Price, each, \$1.60 list.

Type B consists of black rubber covered perforated metal base, which is fitted with two segments, containing 12 solid rubber ribs each. Fitted with screws, nuts and lock-washers. Price, each, \$2.65 list.

Type A consists of gray rubber covered perforated metal base, which is fitted with 24 gray solid rubber segments. Should one segment become damaged it can be replaced. Fitted with screws, nuts and lock-washers. Price, each, \$3.70 list.

Send for Catalog Showing Complete Line of Stanwood Products

Stanwood Accelerator Heel Plate furnishes a stable position for heel when operating the clutch and brake. Prevents wearing hole in floor covering. Constructed same as Type C Step Plate. Price, each, \$.85 list.

Stanwood Conformable Hand Pads add a pleasing appearance. Prevent finger marks and wear on finish of car. Made of leather in various grains. Price, each, \$.90 to \$1.80 list.

Stanwood Pedal Plate used when the accelerator pedal is not positioned near enough to clutch and brake to use heel plate. Same construction as Type C Step Plate. Price, each, \$.50 list.

Stanwood Adjustable Accelerator Foot Rest sells at sight. The user sees comfort and convenience in this little accessory. Relieves leg muscle tension, acts as a foot support. Prevents unintentional acceleration over rough roads. Price, each, \$1.60 list.

HOW NOT TO MAKE A FINANCIAL STATEMENT

(Copyright by Elton J. Buckley)

I suppose every reader hereof knows the advantage to anybody in business, of a good commercial rating. By that I mean a good report given by the mercantile agencies. All manufacturers who are doing a straightforward business realize this with scarcely any exceptions. So do practically all jobbers. It is the retailer who isn't always alive to the great advantage of having a good rating on the books of the mercantile agencies, even though cash is paid for everything and no credit is asked. As a matter of fact, sometimes credit will get more than cash, for the persistent cash payer is usually the object of suspicion. I am not referring to the man who discounts in ten days, for he is really a credit buyer, as he is trusted with the goods for ten days.

Very often a business man needs a good commercial rating very badly. In many cases the lack of it may stand between him and success. When that urgency arises, he will work every scheme he knows of to make the report good, and men have sometimes overstepped the line and made a financial statement which was false. Sometimes it is deliberately and intentionally false, other times it is more exaggerated than false, having been made so by the maker's extreme anxiety to put his best foot foremost.

I propose to say a little here about the proper way to prepare a statement of one's financial position. Remember always that such a statement is prepared for the purpose of obtaining credit, and that if it is more favorable than the cold facts would permit, and some creditor, relying on it, is deceived, he cannot only sue civilly, but he can issue a warrant and proceed criminally.

The first thing to keep in mind, therefore, is to be conservative—understate rather than overstate, the value of every item, and decide every real doubt as to valuation, against yourself. Exaggeration is always bad, and if it passes a certain narrow limit it becomes fraud.

Here is the law as to mercantile reports, succinctly stated:

Where a false representation is made by an individual to a mercantile agency concerning his solvency and financial condition, for the purpose of being communicated to persons who may be interested in the matter, and the mercantile agency issues a report or statement based thereon, third persons who in reliance on such report or statement extend credit to the person making the representation and suffer loss through his insolvency, may maintain an action of deceit against him. In such cases the legal situation is the same as if the false statements were made directly to the party injured. And a client of a mercantile agency, before acting upon a detailed statement made by a merchant, need not himself examine such detailed statement.

The good faith of the man accused of making a false credit statement is always an important factor in deciding whether he has been

guilty of fraud. He will not be found guilty because he committed a technical error—it must go deeper than that. And if he had any real reason for his action, he will generally be given the benefit of the doubt.

For instance, a wholesale dealer made for the purpose of obtaining credit, a financial statement. In it he listed some real estate at a certain price. Later he failed and the real estate was sold—for much less than the value he had put upon it. Some of the creditors attacked the honesty of the valuation, but as it appeared that when the real estate was sold the market was panicky and the price was low on that account, the court said no criminality was made out.

In another case the decision was the other way. A manufacturer, in his credit statement, listed some real estate at a price paid ten years before when the market was highly inflated. At the time he made the statement, all the inflation was out of the market, and he knew that. The court held that there was no reasonable excuse for having listed the real estate at the cost price. Incidentally, the exaggeration in this case made all the difference between solvency and insolvency.

It appears from the case books that many business people in making financial statements, included fixtures at the replacement value, which almost always meant cost, and in some cases (when the market had advanced) meant more than cost. Sometimes this has been held fraudulent by the courts, sometimes not. It depends on the facts of the particular case.

I have personally known of several business men who put their homes in their wives' names but nevertheless included it in their financial statements. In one case the wife had to surrender it to the husband's creditors to keep him out of jail. It is perhaps superfluous to say that the only assets that should go in your financial statement are those which your creditors can reach. A house in your wife's name is usually as far beyond their reach as it was before you bought it.

I remember another man, a large retailer, who had a bad quarter of an hour over a financial statement which he made, and on which he obtained credit. The statement omitted a liability item of \$12,500, represented by his endorsement on a brother-in-law's notes. He said he omitted it because he never expected to have to pay it, as his brother-in-law was amply solvent. In other words, it was such a remote liability that he didn't think there was any reason to include it. But the brother-in-law was smashed by a bad deal, and his creditors came gleefully down on the unfortunate endorser of the \$12,500 notes. As his net worth did not amount to that much, he, too, was wiped out, and then his creditors, who had given him credit on the incorrect statement, took him into court. Since

Stop that Rattling steering wheel

STEERING COLUMN BRACE

Sold through jobbers only in 126
cities in the United States
and Canada

Our New Catalog is Waiting for You

The Steering Column on the Ford car has no support except at the dash where it is held by four bolts and as the wheel is often used as a handle for the driver to get in and out of the car these bolts loosen and continual vibration makes matters worse, sometimes causing the column itself to break. In going over extremely rough roads the wheel vibrates excessively, giving one the impression that the car rides harder than it really does.

The Apco Steering Column Brace

—is fastened to the upper part of the dash at one end and to the steering column at the other, preventing all vibration and making the steering column as solid as a rock. Most large cars have a device of this kind and the Ford is a better car with one. It is made from malleable iron, black enameled, and is furnished complete with bolts and nuts.

Manufactured by

APCO MANUFACTURING COMPANY
Providence, U. S. A.

it appeared that the thing really happened through his ignorance, he got off, but it was a close shave.

Many a man making a financial statement comes to grief by appraising accounts receivable too high. One man listed his whole accounts receivable at face value plus interest, less only 10 per cent to cover possible loss, whereas the fact was that they were only worth 60 per cent of face value. I remember another case in which a somewhat unenergetic retailer with a half dead stock listed it among his assets at cost price, an excess of several thousand dollars over its real value.

Perhaps the most remarkable case was that of a jobber who said in his report that such and such a man was a partner. As this man had valuable assets, this increased the concern's apparent net worth very much. The fact was that this man was not a partner, but only an employee who shared in the profits. The employer really thought that fact of itself constituted a partnership, and he, too, escaped through his ignorance.

HURRY AND DISPATCH

No two things differ more than hurry and dispatch. Hurry is the mark of a weak mind, dispatch of a strong one. A weak man in an office, like a squirrel in a cage, is laboring eternally to no purpose; in constant motion without getting on; talks a great deal, says very little, has a hundred irons in the fire, but very few of them hot, and with these he burns his fingers.

HOW HE DIED

So he died for his faith. That is fine—
More than most of us do.
But stay, can you add to that line
That he lived for it, too?

It is easy to die. Men have died
For a wish or a whim—
For bravado or passion or pride.
Was it harder for him?

But to live: Every day to live out
All the truth that he dreamt,
While his friends met his conduct with
doubt,
And the world with contempt—

Was it for this that he plodded ahead,
Never turning aside?
Then we'll talk of the life that he led—
Never mind how he died.

How about the stationery you use? What sort of an impression will it make upon the jobber or manufacturer to whom you write? Will it make them value your trade?

BRISBANE ON ADVERTISING

Arthur Brisbane, before a luncheon of the Advertising Council of the Chicago Association of Commerce, said:

The rainbow was the first great advertisement. It had position. It had color. It held out promise of benefit in effect: "I shall not drown you again if you behave." And then it had the value of repetition, because it is repeated in the same position and color and promise after every rain.

The next big advertiser was Caesar, when he wrote on the walls of Rome for the people to read just what the senators were doing in the senate chambers. These advertisements of old contained the elements necessary in all great advertising, which are:

Advertising must be seen; it must be read; it must be understood; it must be believed; it must create a want.

Advertising is different because you must make the man stop thinking as he thinks and make him think as you think and interested in the thing you are interested in. It is easy to interest a man in himself. If your advertising convinces him that it is good for himself, you have him sold.

Suppose a man comes into this room and wants to reach all of you as I am doing. He goes to the man at the door and says: "How much will you charge me to whisper?" The man says: "I will charge you \$2 to whisper." "How much will you charge me to yell?" "I will charge you \$10 to yell." This man buys five whispers and nobody knows he is here and he thinks he is advertising (laughter). If he had bought one good yell you would have said that is an awful bunker, but at least he is on earth.

Domestic prosperity depends on what we can sell the outsider. Good advertising creates a want and a desire abroad, and thus creates employment, prosperity and happiness at home.

Don't take it for granted that the other fellow knows all about what you have. Few of us ever know enough, and many of us never know anything. Don't be afraid to keep on telling the world what you have. You have got to keep it up.

Advertising is the heart-beat of business. If you stop a man's heart, he dies. If you stop advertising, business dies!

Bacon said: "Reading maketh a full man; writing an exact man, and talking a ready man," and let me add: "Thinking maketh a real man! One great trouble with our American life is that we have invented every device to save us the trouble of thinking.

Why should you despise small sales and refuse to take pains with the customers who spend nickels and dimes? Are you so much wiser than Woolworth?

The Brake Lining that Resists Heat

RUSCO Brake Lining and Clutch Facings

are proof against the high temperature generated by grinding brakes. Motorists that use Rusco once, always return for it, and Rusco dealers are constantly adding to their list of satisfied customers.

KEEPING THE BUSINESS BUOYANT

In these days when the seas of business are uncertain, it's more than ever necessary to keep each business concern buoyant. Doing so is sure to prevent wrecks and to avert disasters.

1. Lighten the Overhead

The thing most likely to become too heavy, weight down the business and lessen its buoyancy is overhead. Now, when all the buoyancy of which the business is capable may be needed, it is wise to keep the overhead down to the lowest possible point. This is no time to expand overhead at the expense of the business. It is the time to increase the volume of business without increasing the overhead.

The greater the volume of business done on a given overhead the greater the buoyancy of the business. The smaller the volume of business done on a given overhead, the less the buoyancy of the business.

2. Remove Temptations from Employees

Many an employee has gone to jail because his employer has placed too many temptations in his way. It has been so much easier to go wrong than to go right that he has taken the wrong course. The more temptations placed in the way of employees, the greater the danger of leaks that will seriously affect the buoyancy of the business.

The system upon which the business is operated needs to be such that it's easier for the employee to do the right thing than the wrong one. A method of checking is needed that will detect the first wrong step. It endangers the buoyancy of the business to wait until there's a long track of wrong steps.

3. Guard Your Goods

One of the surest ways of preventing thefts is to be able to detect a theft at once. Some large stores have worked out systems by means of which, in the course of a few minutes, they can tell if any article is missing from any department.

The less time the thief has to make his getaway, the greater the chance of catching him. The less his opportunity of repeating the operation undetected, the smaller the quantity of goods stolen.

Goods in stock are of even greater value than money. One can only get a dollar for a dollar bill, but goods that he pays a dollar for he sells for more than a dollar. It's for this reason that even greater care needs to be given to keeping an accurate stock record than in keeping an accurate cash record.

4. Make the Same Mistake Only Once

Mistakes in business, like rats in a wooden ship, gnaw holes that may result in serious leaks. There appears to be no way of getting rid of them altogether. Rats are killed as soon as caught and these rats gnaw no more holes. When mistakes are found, just as effective steps

should be taken to prevent that same mistake being made again. In this way dangerous leaks in the business can be prevented.

The only man who never makes a mistake is the man who never does anything. The difference between the wise man and the foolish man is that the wise man never makes the same mistake twice. It is a wise precaution to run the business on a system that will catch all possible mistakes. Make the same mistake but once and the buoyancy of the business will be maintained. Continue to make the same mistakes and the business will soon be full of holes.

5. Speed Up the Turnover

Unselected stock has sunk more than one business and caused the red flag of the auctioneers to be raised as a warning to others of a business wreck in the path of navigation. Nothing weighs down a business like foolish overstocking. Nothing lessens the buoyancy to so great an extent. Just at this time, it is more than ever necessary to keep down the stock. If prices start downward, the overstock will acquire still more dangerous weight with every drop.

Keeping down the stock and speeding up the turnovers increases the buoyancy of the business. It makes it draw less water. It makes it possible to pass, with safety, over shoals which, otherwise would wreck the business. Therefore, it is well to keep such an accurate record of the stock and take inventories so frequently that there will be no possibility of any item of stock piling up without the knowledge of the man at the top.

6. Watch the Markets

When a ship runs onto rocks or sand bars it immediately loses its buoyancy. To prevent such catastrophes, the greatest possible care is taken to watch and chart changes in seas and channels.

When a business runs upon the rocks or the sand bars of market demand, that business loses its buoyancy. To prevent such a catastrophe, the changes in business conditions must be carefully studied.

Buying demands of the public are constantly changing. There is not a line of business where this is not the case. There are some things that people were buying a generation ago that they are not buying today. Business channels are constantly changing. Where it was clear sailing a generation ago there may be shoals today.

The changes that are taking place today are far greater than usual. To prevent disaster, it is necessary to study the demands of the people and to rechart the business seas as the commercial storm caused by the war subsides.

7. Count Volume and Not Dollars

Dollars of sales don't necessarily measure the volume of business done. A dollar isn't nearly as accurate a measure of value as a yard

Only Our Output Can Limit Your Sales of AC's

As long as we continue to manufacture more and more spark plugs each year, and as long as AC Spark Plugs continue to merit the pronounced preference as original equipment that they now enjoy, dealers stocking the AC line can be sure that their sales and profits will increase in proportion to our production.

The demand for AC's is tremendous and growing daily, due to the unfailing service that they give and to our policy of stimulating their sale through a widespread and consistent advertising campaign.

Concentrate on the complete AC line for a profitable, permanent and growing business of quick turnovers and customer good will. Dealer information sent on request.

Champion Ignition Company
FLINT, *Michigan*

U. S. Pat. No. 1,135,727, April 13, 1915
U. S. Pat. No. 1,216,133, Feb. 13, 1917. Other Patents Pending

of length or a pound of weight. The yard remains the same but the dollar will not always buy as many yards. The pound remains the same but the number of pounds of any commodity required to equal a dollar constantly changes.

Today a dollar isn't worth much more than fifty cents were in 1914. If a man is doing the same volume of business today that he was doing then, his dollars of sales will be double those of 1914. Business buoyancy is needed, but it is a mistake to buoy up hope and optimism with the soap bubbles of sales volume indicated by the inflated dollar.

The thing to watch is the actual volume of goods sold, and the amount of service people have paid for. Count the yards, the pounds and the dozens when figuring the volume of business rather than the number of dollars.

AUTOMOTIVE INDUSTRY SECOND

Production in the automotive industry in America has reached a point where the National Automobile Chamber of Commerce announces that the 1920 business will rank second only to steel. In 1919 motor vehicle production amounted to \$1,807,594,580. If bodies and accessories were included, this figure would pass the two billion mark.

New York State is first in the number of automobiles registered with a total of 570,000 cars. Ohio's 511,000 automobiles give it second place. In the number of machines per capita, Nebraska and Iowa lead with approximately one car to every six people. This is probably due to the fact that the largest percentage of increase in automobile registration has been in agricultural sections, while the total population of these states is small.

Undoubtedly the reason for this was the government guarantee for wheat prices, while in Tennessee, Alabama, Louisiana and Georgia the high price of cotton gave these states leadership in the increase of automobile registration throughout the country.

SUBSTITUTE FOR FROSTED GLASS.

All kinds of glass are scarce on the markets, and frosted glass is particularly hard to get now. A makeshift substitute that isn't bad at all, if properly applied, consists in brushing on the plain glass a coat of ordinary flat wall paint, afterwards stippling it with a stiff brush to give it a uniform appearance and eliminate the brush marks. In factories and other places that do not call for de luxe appointments, this painting of windows in place of frosted glass will answer permanently and save considerable money, for the glass is not only scarce but it is high in price at present.

WAS THERE A GARAGE IN EDEN?

Nobby-headed historians and archaeologists of the Rube Goldberg type who have written weighty tomes about the life, customs and handicraft of the paleolithic and neolithic ages must have been fakirs. Vehicles in the Chellean age traveled on rubber tires produced by our ancestors four million years ago.

That's the belief expressed by F. H. Daniels of Mena, Arkansas, and he backs up his belief by photographic proof. While occupied in his duties as chairman of an improvement district of the Mena Water Works, Mr. Daniels picked up on the outskirts of the town a 20-pound stone that distinctly shows the imprint of what seems to be a tread tire.

What puzzles the westerner is how the print got there—expert mining engineers asserting that the stone is of a formation of four million years ago. Consequently he is asking just when it started the manufacture of these tires and requesting a solution of the puzzle. It being within the memory of all how Old Dobbin shied in terror at the first automobiles, Mr. Daniels is almost afraid to reconstruct the scene in early days four million years ago. Think of the fright of the dimorphodons, first winged vertebrates at sight of a pneumatic equipped Dinosaurless six, driven by Paleolithic Pete, rumbling along Main street.

Imagine our Stone Age ancestor arising at dawn to the chime-like song of the diplodocus—alarm clock of those times—grasping his crude, stone implements and reporting to work at the Paleolithic Rubber Company. At nightfall after a hard day's work building tires, he jumped into his speedy Cro-magnon runabout equipped with pneumatics and gave himself over to the joy of the chase.

Perhaps he went to some shady pool and with hook and line angled for the wily dinichthys or threaded forest trails to do battle with the ferocious triceratops and the cunning ceratosaurus. You've got to hand it to those ancient industrials for facing prehistoric mammoths and other towering carnivorous dinosaurs with nothing in the way of weapons but smooth stones flung by a muscular right arm. Shades of Goliath and Christy Mathewson!

As George M. Cohan used to sing amid a galaxy of flag-waving chorus beauties, "There's Nothing New Underneath the Sun."

Little Billy, a four-year-old, was being lectured by his mother for teasing baby Bobby.

"Why, Billy," said his mother reproachfully, "I don't think you love your little brother—we'd better send him back."

"Oh, yes, mother, I do love him; besides," triumphantly, "you can't because we've used him!"

HERE'S the 1920 Diamond. A big, husky, seven bar Tire. It's the best tire Diamond has ever made—and Diamond has *always* made a good tire. Already it has met a ready welcome from tire buyers.

Under the Diamond 1920 proposition YOU, the distributor and YOU, the dealer, are the beneficiaries of one of the broadest and most generous policies ever formulated by a tire manufacturer.

Write today for this new Diamond proposition.

NO NEW LAW NEEDED TO PROTECT AGAINST PRICE SLAUGHTERERS

(Copyright by Elton J. Buckley)

There is pending in Congress now a bill which if it passes will empower manufacturers of trade-marked goods like package corn flakes, or automobile tires, or B. V. D. underclothes, to say what those goods shall be sold to the public for. Several of the big manufacturers of trade-marked goods have been trying for a long time to get that bill through, for they argue that it will enable them to prevent their brands from being made leaders by price-cutters with the result of becoming unpopular with other merchants. The bill would compel the sale of trade-marked goods at prices fixed by the manufacturer.

The courts are apparently doing all they can, however, to make the passage of this bill unnecessary. That is, they are affirming the right of any seller to refuse to sell any buyer, thus giving the manufacturer of trade-marked brands a present remedy against the cutter who would slaughter his prices, viz.: the right not only to cut him off, but to cut off anybody else who sells him.

Another decision has now been handed down by the United States Court, for the Southern District of New York, which makes it perhaps clearer than the preceding cases, that a manufacturer doesn't need new laws in order to keep his goods from being cut to death. He can keep them out of cutters' hands. The case referred to involves the sale of Goodyear tires. A New York tire jobber who wanted Goodyear tires to cut, took the manufacturer into court, claiming that he was violating the anti-trust laws in the following ways:

1. By selling only certain dealers.
2. By refusing to sell him.
3. By forbidding the dealers that he did sell to sell to other dealers, but only to consumers.
4. By compelling them to resell at certain prices.
5. By threatening that if the dealers didn't obey all these rules he would cut them off.
6. By spying on the trade so as to prevent dealers from selling to any dealer not on the list.
7. By refusing to make adjustments on tires unless they came through the recognized dealers.

It seems that this jobber did persuade a few listed dealers to sell him secretly, but the manufacturer soon learned about that and put a stop to it. Some of these listed dealers he cut off, others agreed to go along merely upon being threatened. The result was that the jobber couldn't get Goodyear tires for love or money. He took the position, therefore, that this whole scheme was an illegal interference with compe-

tition and a practical monopoly, and he asked the court to smash it.

Let me say here that I can think of no scheme to keep goods away from cutters which could be more complete than this, and if the court decided this to be legal, it means that pretty nearly everything along this line is legal.

The court did decide it to be legal. The decision went deeply into the question of the seller's right to cut off a buyer, and to cut off others who sold that buyer, and decided that he had that right almost without limit. I quote the following from the decision:

There is no decision of an Appellate Court construing the Sherman Act, to which I have been referred that prevents a single trader from rejecting a customer because he did not like the prices at which the customer resold or otherwise disapproved of his mode of conduct. Nor does the fact that a single trader extends his policy of refusing to sell to any one of many customers who may cut prices impose any additional legal liability. It is impossible to see how a single person may choose one customer or reject one customer with impropriety, and not separately select or reject a number of customers with equal freedom.

The Circuit Court of Appeals for this circuit seems to have held that this may be done in the case of *Great Atlantic and Pacific Tea Co. vs. Cream of Wheat Co.*, 227 Fed. 46, 141 C. A. 594. Judge Waddill has recently passed upon this precise point on demurrer to an indictment under the Sherman Act in the decision of *United States vs. Colgate & Co.* (D.C.) 253 Fed. 522. He there held that the Sherman Act did not reach cases where a manufacturer sold to dealers upon an agreement by each dealer to live up to the arrangement. The first cause of action presents no facts showing a violation of the Sherman Act and the demurrer to it must be sustained.

To impose the restriction contended for upon a producer would restrict his actions in choosing his customers in a way that only the clearest public policy can justify. Such a rule would make the motive of declining customers the test of legality.

Before the Sherman Act, it was the law that a trader might reject the offer of a proposing buyer, for any reason that appealed to him; it might be because he did not like the other's business methods, or because he had some personal difference with him, political, racial or social. That was purely his own affair, with which nobody else had any concern. Neither the Sherman Act, nor any decision of the Supreme Court construing the same, nor the Clayton Act, has changed the law in this particular.

With the above settled as the law, I can see no reason for the passage of any resale price legislation at all.

NOT SO MANY, AFTER ALL

"Judging by the sound of their voices, I imagine you have a large family of children," said a traveler in Arkansas.

"That's like the story of the bullfrog," returned Gap Johnson, of Rumpus Ridge, Ark. "Estimating by the belling, the feller figgered that there must be about a thousand frogs, and when he looked he found just two. You'd think, to hear 'em yellin' and cussin,' I had forty children; but, shucks, there hain't but fourteen of 'em."

U. S. Passes 7,000,000 Automobile Registration Mark

REGISTRATIONS of automobiles in the United States reached the astounding total of 7,718,020 in 1919!

These figures show a gain over 1918 registrations of 1,708,882 passenger cars, trucks and tractors placed in operation in twelve months. This gain in car ownership is greater than in any prior year and exceeds by more than 700,000 the 1918 gain of 1,004,162 new registrations over 1917.

In percentage gain the United States increased 27 per cent in automobile registrations last year. Had not the factory output been restricted by steel shortage, coal shortage and labor troubles, it is estimated that approximately 3,000,000 new automobiles would have been produced in 1919, and it is certain that this entire production would have been absorbed by the buying public.

Taking the estimated population of the continental United States from the Rand-McNally atlas as slightly more than 98,500,000, there is one automobile to each unit of 12.8 persons in the country! In other words, there are sufficient automobiles in use today to simultaneously transport half the national population—a condition that was inconceivable so few years ago as 1915, at which date there were only 2,423,788 motor cars in the United States.

Fourth in Total Number

In 1919 California registered 493,463 automobiles, trucks and tractors and these figures give California fourth place among the states of the union in automobile ownership. New York, Ohio and Pennsylvania in the order named exceeded California in total 1919 registrations. Last year California's gain in cars registered was 141,600 over 1918—a percentage gain of 40.2 per cent in car ownership in a single year. This gain in total of automobiles registered is greater than that shown by any other state except the gain made by Pennsylvania, which led California in 1919 registration increase, by 1,990 machines. However, in percentage gain California's mark of 40.2 falls below the respective gains made by several other states, which list is headed by Missouri, with a gain over 1918 of 55 per cent in automobile licenses issued.

California Largest per Capita

In ownership of automobiles in proportion to population, California now leads all other states of the union with one car to each 5.6 persons in the state. Last year Iowa and Nebraska were practically tied in first place in this method of computation with one car to every 7 of population and California stood

seventh in the list of states with one car to each 11 persons.

Iowa now ranks next to California, having a car to each 6.1 persons and Nebraska is third with one car to each 6.2 persons. South Dakota ranks fourth with a car to each 6.3 of population; Montana if fifth with one car to each 7 persons; Arizona sixth with a car to each 8 persons and Kansas is seventh with one car to each 8.1 persons. Mississippi ranks lowest in this list with a car to each 40 persons.

In sectional statistics the three Pacific Coast States of California, Washington and Oregon outdistanced all other state groupings in percentage of 1919 registration gains. These three named states increased 35.4 per cent in automobiles placed in operation last year over 1918 registrations. California led with its 40.2 per cent gain. Washington was next with a percentage gain of 37 per cent and total registrations of 164,674, and Oregon was third with a percentage gain of 30 per cent and total regis-

Converse Tires

More Miles—Less Skid

When you tell a customer that the perfect non-skid rubber tire has not been built, you are removing the bunk from tire-talk.

By the same token you can assure him that the Converse Cord, with its tough, buttressed edges and powerful suction grip, is the nearest approach to 100 per cent non-skid of any tire yet produced.

trations of 86,000. Oregon last year exceeded its 1918 registrations by 20,292 and Washington licensed 44,769 more cars in 1919 than it did in 1918.

Southern States Show Next Largest Gain

The group of states which ranks next to the Pacific Coast group in 1919 percentage gain is composed of the Southern states which showed a 33 per cent gain in registrations last year. The Mountain states maintained the national average of 28 per cent gain. The Eastern manufacturing states fell to 23 per cent gain and the Middle Western agricultural states made the poorest showing with only 22 per cent gain of automobile registrations last year over 1918.

Explanation of this variation in percentage registration gain is apparent by noting the proportion of automobiles to population in the various state groups. In the Middle Western farming states the "saturation point" has been nearly reached. For instance, Iowa has one automobile registered to each 6.1 persons; Nebraska one car to each 6.2 persons; Indiana one car to each 10 persons; South Dakota one car to each 6.3 of population; Minnesota one car to each 8.8 persons.

Thus it will be seen that there is not the available field here for percentage increase in ownership of cars that is possible in the Eastern states or in the Southern states where there are many fewer machines owned in proportion to population. In the Southern group of states, Alabama has one car to 33 persons; Georgia registered one car to each 22 of population; Mississippi one car to 40 of population; Tennessee one car to each 35 of population, and Louisiana one car to each 35.5 persons. Among all the Southern states Florida makes the best showing with one car to each 13 persons. In both the Middle Western farming states and the Southern cotton states there have been several years of good crops and high prices and these conditions are reflected in the large numbers of automobiles that have been purchased. In former years the Southern states showed comparatively small car ownership and they still have fewer cars in proportion to population than do other parts of the nation.

However, the South is now undoubtedly a splendid field for automobile sales and with a continuance of good crops and high cotton prices this part of the country should absorb a large volume of the 1920 automobile output. Even this year, the South's increase in automobile registrations was notable and next to the Pacific Coast group of states reflected in percentage increase of automobile registrations the plentiful supply of money and its general distribution better than did any other state group.

The percentage of car ownership among the eastern manufacturing states shows that a large

market for cars among new owners exists there in comparison with a similar market in other groups. New York has registered only one car to 13 of population; Pennsylvania one car to 16 persons; Delaware one car to 13 persons; Massachusetts one car to 16 persons; New Jersey one car to 16 of population. Counting Ohio among this group of manufacturing states gives it ranking position with one machine registered to each unit of 9 persons.

Mountain States Have High Percentage

Among the Mountain states automobiles are well distributed in proportion to population. Colorado has one machine registered to each 8.8 persons; Wyoming one machine to each 8 of population; Montana one car to each 7 persons; Idaho one car to each 9 of population. Utah makes the poorest showing in this listing among the Mountain states with one machine to each 12 persons.

In the Pacific Coast group California leads in "automobile saturation" with one car to each 5.6 of population; Washington is next with a machine registered to each 8.5 persons and Oregon has one car to each 9 persons.

Among the leading ten states in total auto-

1919 Registration, Percentage Gains and Units of Car Ownership in Each State

	Registration Gain	Percentage Gain	One Car to Unit of Population
Alabama	23,836	51%	33
Arizona	6,041	22%	8
Arkansas	7,987	19%	34
California	141,600	40.2%	5.6
Colorado	33,615	48%	8.8
Connecticut	16,998	20%	11

mobile registrations for 1919 New York, as in all former years, heads the list with 558,453 machines of all types registered. Ohio is second with 540,500; Pennsylvania has forged into third place with 513,700 registrations, displacing Illinois from this ranking in 1918.

California is in fourth place with 493,463 a gain of one place over the 1918 listing. Illinois is now fifth with 478,318 machines; Iowa retains its 1918 position of sixth place with 362,052; Texas, with 326,444, is in seventh place, a gain of one position and changing places with Michigan, 325,052, which was in seventh place in 1918 and now is in eighth position. Missouri, with 288,181 machines registered, holds ninth position, breaking into the "first ten" for the first time, and reducing Indiana, 277,252, from its ninth place in 1918 to tenth position in 1919. These same states were all among the leading ten in 1918 automobile registrations with the exception of Missouri, which displaced Minnesota from honors among the "big ten" this year.

Ten Leading States in 1919 Automobile Registrations

	Registrations	Increase	Per. Cent Increase
New York.....	558,453	104,865	23
Ohio.....	540,500	123,100	30
Pennsylvania.....	513,700	143,590	30
California.....	493,463	141,600	40.2
Illinois.....	478,318	89,183	23
Iowa.....	362,353	34,583	11
Texas.....	326,444	76,361	30
Michigan.....	325,052	63,885	24
Missouri.....	288,181	103,035	55
Indiana.....	277,252	50,092	22

The leading ten states in registration gains in 1919 are: Pennsylvania, with a total of 143,590 new machines licensed; California, second, with 141,600 increase; Ohio, third, with 123,100 gain; New York, fourth, with registration gain of 104,865; Missouri, fifth, 103,035; Illinois, sixth, 89,183 increase; Texas, seventh, 76,361 gain; Michigan, eighth, 63,885 gain; New Jersey, ninth, 60,156 increase, and Minnesota in tenth place with registration gain for 1919 of 57,592.

The remarkable growth of the automobile industry in the United States is graphically shown by noting the yearly increase in automobile registrations during the past five years. In 1915 there were 2,423,788 motor cars registered in the various states of the union. In 1916 the registrations totaled 3,564,674, a gain of 1,140,886 machines. In 1917, 5,004,976 cars were registered, a gain for the year of 1,440,302 automobiles in operation. 1918 registrations totaled 6,009,138, a gain for that year of 1,004,162 machines. In this year the effect of curtailed production on account of the war is apparent. In 1919 the registration gain of 1,708,882 machines sets a new record and is particularly remarkable in view of the many obstacles that retarded production.

The spectacular increase in automobile registration among the different states is likewise one state, New York, had more than 200,000

machines registered. In 1916 five states, New York, Illinois, California, Ohio and Pennsylvania, showed registrations exceeding 200,000 each. In 1917, New York registered in excess of 400,000 automobiles and the remaining four of the states named above all registered more than 300,000 automobiles in each state, while three additional states passed the 200,000 registration figure. In 1918 Ohio climbed with New York into the 400,000 class; Illinois, Pennsylvania, Iowa and California each safely passed the 300,000 figure and four more states registered machines in excess of 200,000.

Last year, three states, New York, Ohio and Pennsylvania, went over the 500,000 mark and five additional states each registered cars in excess of 300,000.

GOLD MEDAL AUTO CAMP

Here are a couple of the attractive items that make the selling of Gold Medal Camp Furniture an easy and attractive proposition to the merchant who handles automobile accessories and has a trade with summer automobile campers.

The ease of erection, the completeness, as well as the compactness of the Gold Medal outfit is evident from the illustrations. The double width cot folds into a small enough space to be carried in the tonneau, on the running board or in the rear of the car. For the traveler who prefers to be near his car, G. M. Auto Cot No. 180 is also illustrated. This has a folding foot rail, over which can be fastened a tent, the top of which can be fastened to the top of the car.

A complete catalog, as well as full information and dealers help, can be obtained from the Gold Medal Camp Furniture Company, at Racine, Wisconsin.

It is when you take interest in a thing you find it interesting.

“Big Business” Buys UNITED Spark Plugs

Owners of big truck fleets buy United Spark Plugs because they survive the hard work and abuse of truck service.

United Spark Plugs provide consistent ignition day in and day out—they serve. And truck owners want the “Lockt” terminal—for it gives a positive contact that no truck vibration can loosen.

There are many repeat orders of United Spark Plugs—“Big Business” buys them again and again.

United Spark Plugs are guaranteed—and you make a liberal profit on each sale.

UNITED SPARK PLUGS

BUSINESS MEN SHOULD BE ON GUARD

At a recent conference held in St. Louis, attended by representatives of business and professional men, farmers and other unorganized groups to combat the spread of radicalism, Bolshevism and I. W. W.-ism in the United States, and to make the power of these business men and farmers felt in American politics, rather than leaving it to theorists, politicians and organized groups, a movement has been set on foot which it is expected will enlist the support of every true American having at heart the interests of his country, and who realizes the great impetus which has been given by our officials towards the soviet and socialistic forms of government.

The need for some strong, true American, who does not hesitate to fully and frankly express himself upon the great questions now being discussed, was mentioned, for the country has long realized the penalty in blood and treasure which it has paid through listening to the fine sounding phrases and pleasing words of its professional political leaders. Business men should consider the welfare of the country above that of party allegiance.

In a speech which thrilled his hearers, Edward F. Trefz, of Los Angeles, who served on the overseas commission for the United States Food Administration, told of the passage of the Adamson Law, a few years ago, when the President of the United States went before Congress and made his demands for the passage of this legislation, at the behest of four labor leaders, Congress, of course, naturally taking its cue from the President, a large majority of which was of the same political party.

After discussing the power wielded by organized labor in the state legislatures and city councils of the country, Trefz said:

"But in 1916 came the full tragedy, the Adamson bill, which, when introduced in Congress, brought a great protest from business men and farmers throughout the United States.

Occupying the President's Box

"I was in Washington the day that bill was passed," he continued. "Seated in a box in the house, usually occupied by the President of the United States, his family, or high diplomats, were Warren Stone, president of one of the brotherhoods, and Samuel Gompers, president of the American Federation of Labor.

"Stone held his watch in his hand and looked down upon the 422 men sent there to legislate for the entire people of the country. Can you visualize that scene—you men who pay 87 per cent of all the taxes in the country?

"I heard the monotonous roll call proceed until the majority of those congressmen with their eyes fastened in fear upon Stone and Gompers had voted to pass the Adamson bill and it became the law.

"When we remembered the courageous challenge of the revolutionary congress to Great Britain, the most powerful nation on earth, it was difficult to realize that this one had meekly surrendered to a small organized group in this country.

"Now, how long are you business and professional men, who are directors in this great corporation—the United States—going to endure this sort of thing? Just as long as you are willing to have a government by a class for a class this condition will continue.

KEEPING YOUNG

Most people want to grow.

They would like to advance in their work, earn more, have greater influence, do bigger things.

Yet, strange to say, the world is full of people who do not "grow up." They have lost the secret of their youthful days. They come to a halt in self-development, and folks say they are getting "old."

But a person is never old until he quits growing; and he need not quit growing until the end of his years.

The most conspicuous fact about great men—men who do big things, and keep on doing them—is that they never cease growing.

They are perpetually young.

They have the real thing, of which Ponce de Leon's "Fountain of Youth" was only an imitation.

If a man sets his heart upon growing, he has but three things to do.

First, he must be a learner all his life.

Then he must be a thinker—and must think hard.

Finally, he must be a doer.

Some people are long on thinking but short on doing.

They are dreamers.

Success and rewards always come to the person who continues to grow, but the greatest reward consists in having found the secret that makes life continuously interesting.

—J. Ogden Armour.

Don't take anything for granted—not even the things which you feel you are reasonably certain concerning. Find out beyond all peradventure of doubt. Some of the very points upon which you may think that you are well informed, may be the very ones where there will be unexpected complications. Find out of someone prepared to give you an authoritative opinion—banker, lawyer or someone else.

Remember that a good many laws were changed during the period of the war, to take care of the various war and inheritance taxes. More than one individual who "thought" he knew, has had a surprise party coming to him.

MOSSBERG

ALL STEEL

Wrenches and Tools

A MOSSBERG Wrench for every need; adjustable, open-end, socket wrenches; socket sets (most complete), special wrenches for automobile, truck, tractor and Ford car equipment—A “Mossberg” for every requirement.

Hardware dealers stock the Mossberg line of **all steel** wrenches because the individual wrench or socket is strong and convenient—it is the result of long study of wrench needs. And this one line is so complete that it meets the needs of every customer; and special sets arranged for the garage man, the expert machinist, the motorist, the marine engineer, sell on sight.

Send for catalog and get acquainted with the various styles and finishes of the Mossberg line.

OPPORTUNITY WAITING JUST AHEAD

"No man can do his best work who spends his time envying someone else's position. Your big opportunity and mine lies right in the work we are doing now."

We all get tired of our particular tasks sometimes. As a rule, though, the trouble is not with the task nearly as much as with ourselves.

When we come to analyze the matter honestly and fairly, we are sure to find that we have been slighting the preparation for, or the performance of our work, somewhere, and as soon as we do that, we kill our interest in it. Or perhaps we are a bit physically out of tune and need overhauling by the doctor, or more fresh air, or longer hours of sleep.

Don't get grouchy with your job until you have got yourself into shape, and by that time you are sure to find that your big opportunity lies right under your hands. Naturally we are all ambitious and we want to advance and progress, but to do that we do not need to go off to some far-away field. It is much more logical that we shall do the work we are doing so well that we can use it as a stepping stone to something better. The secret of progress is to do what is ours to perform, so much better than anyone else can do it that advancement comes as a matter of course.

And, by the way, advancement does not always mean chasing from one point to another. Many a man has advanced steadily in the same concern from bobbin boy or office worker to president or director of the company.

Did you ever stop to think, as you viewed a great and splendid play made strong and dynamic by some powerful actor, that the actor himself had to begin with humble parts, always working up and carefully studying the methods and manners of the one just above him? through being a conscientious understudy, he learned to play the leading roles.

What about the ones who are just above you and me in the work we are doing? Are we wise enough to study them and to learn how and why they are worth more and more capable than we are? In place of envying their job, it will pay us to prepare ourselves definitely to fill the place we are in the best that it can possibly be filled, and to understudy the part of the one just above us.

Douglas Malloch says:

"If you can't be a highway, then just be a trail.

If you can't be the sun, be a star;

It isn't by size that you win or you fail—

Be the best of whatever you are."

If we make that last line our motto in life, we will have no reason to be dissatisfied, for, no matter what our sphere, we will be a splendid success. It is not given to all of us to be "pines on top of the hill," or big "bushes," or "captains," but, as the poet tells

us, if we can't be a "muskie" (muskellunge), "then just be a bass—but the liveliest bass in the lake."

All too many people find fault with fate, as they term it, and with their own opportunities in life, and their chances of getting ahead, when the fault lies with themselves. They do not take pains to be the best of their kind, and to brighten the corner wherever they may happen to be.

How is it in your business? Are you looking with admiration and envy at the position and income of some of your business neighbors and friends? Are you indulging in day dreams of what you would do if you had their power or bank account?

Don't waste time that way. Just go after your own position and your own bank account, always remembering that your big opportunity is in the work which you are obligated to do right now. If you do that well, better than anyone else can do it, your position will be assured, and your income will be a growing, vigorous thing.

Ask yourself these questions:

Am I exerting my full abilities and powers?

Am I doing all I am capable of doing?

Am I making the most of today?

Am I planning ahead for a more prosperous tomorrow?

What is the goal I have my eye fixed on five years from now, ten years from now?

What am I doing to make myself big enough and well trained enough for larger things?

Do I want success enough to pay the price of self-sacrifice and hard work and strenuous understudy?

Take it from me—if you do, you will never complain of lack of Opportunity, for Opportunity is always just ahead waiting for you to catch up with it!

SPEED LIMIT EASILY FIXED

"I was motoring with a friend along the Dixie highway last summer when a bewhiskered old constable on a motorcycle overhauled us, shook his stick in a threatening manner, showed his badge, and ordered us to come along with him," relates Sam Rork.

"Fearful of being late—as I was to officiate as best man at a wedding—I decided to temporize with the old fellow. 'We were not exceeding the speed limit, uncle,' I declared. 'I'm sure of it, and here's \$2 to back up my assertion.'

"'And here's a drink, just to prove that my friend's right,' chimed in my companion.

"'Well, with all this agen me, p'haps I'd better give in,' said the old chap, after putting away the money and the drink. 'It's been a long, dry summer and I don't feel like running the town into any more expense.' And so we parted amicably."

DEATH OF CORBIN SALES CHIEF

William E. Diehl, Sales Manager of the Corbin Screw Corporation, New Britain, Conn., died last month of pneumonia, after an illness of but one week.

For the last twenty years Mr. Diehl was employed in different executive positions by either the Russell & Erwin Mfg. Company or the Corbin Screw Corporation.

Mr. Diehl was exceedingly active and successful in each of the positions he filled. He was possessed of a tireless energy, a cheerful temperament, and never-failing kindness and courtesy, and his sudden death was deeply regretted by a large circle of friends.

In 1917 he married Miss Mildred E. Waite of Staten Island, N. Y., who survives him, with two children, Mildred and Mary Louise.

FIRES CRIPPLE PRODUCTION

Not content with the hire and fire difficulties which manufacturers all over the country are encountering in their employment departments, an avenging fate seems to be hanging over the manufacturers of the Middle West. With production difficult, materials dear and labor high, it is reported to us that three of the leading manufacturing establishments in Indiana and Ohio have recently been crippled by fire losses. The Vlecheck Tool Company, at Cleveland, recently suffered a \$100,000 loss by fire, which will, of course, interfere with their production for some time to come. Also at Cleveland, the Columbia Hardware Company was recently the victim of a smaller fire loss and over in Ft. Wayne, Indiana, E. C. Manweiler & Company's plant producing electric goods and specialties has also been partially destroyed by fire.

UNIVERSAL VACUUM CLEANER

The Universal Vacuum Cleaner is a new member of the large group of Universal home needs, and is the result of extensive tests before its appearance on the market.

The company feels that it has been rewarded for its delay by the enthusiastic reception that greeted the new sweeper.

Those who have long handled the Universal line, know that Landers Frary & Clark would not advertise any new item that was not worthy of the reputation and standing of that institution, and this vacuum cleaner's name was made the minute Universal was stamped on it.

Merchants not familiar with this item will be interested in meeting it even more intimately than they can from the printed page.

SELLER OF SERVICE GRANTED TRADE-MARK

It is now possible to secure government registration for an emblem or business badge of a concern which sells brain power or "service" as distinct from merchandise. Jobbers, commission men, brokers, have in the past

made many attempts to register their emblems as trade-marks in the United States Patent Office. The Commissioner of Patents has been steadfast in supporting the Examiner of Trade-marks, who held that only insignia applied to articles of trade and commerce might secure the benefit of Uncle Sam's registration. No matter how valuable a "service," or how much brain power was given, it was not deemed that such functioning was capable of being tagged or marked. Thus, a wide field of endeavor having for its product a "salable" service or responsibility has found itself without the same protection for its integrity as accorded a canner of beans or a manufacturer of patent medicine.

The issuance, after a prolonged hearing, of a formal Federal credential authenticating the use of the emblem embodying the words "Truth Well Told," by the H. K. McCann Company, advertising agents, is of utmost significance to those who offer the product of the brain as distinguished from commodities having customary physical form.

After being repeatedly balked at the Patent Office, the McCann Company directed its efforts to the Copyright Office, at the Library of Congress. The successful plea was based on the fact that the Constitution clearly states that authors and inventors are entitled to protection for their products, and, inasmuch as the protection was refused by the Patent Office, an obligation lay with the Copyright Office to protect a class of marks in many instances very valuable. The McCann Company has just secured as the reward of its efforts the official certification of the emblem shown in the accompanying picture. The primitive hewer of stone, chiseling the words "Truth Well Told," was the emblem granted recognition.

Of chief interest to the readers of the **HARDWARE WORLD** is the fact that a way is now open for certifying the marks of brokers, warehouses and others offering certain types of expert service. Similarly shippers, middle-men, forwarders, brokers, commission houses and all manner of concerns not engaged in manufacturing lines have the way pointed to a new haven.

THROW AWAY YOUR OLD TOOLS

—and Change Your Tire in a Jiffy without
Pulling and Tugging and
Sweating and Swearing.

NO MORE

Hard Work,
Dirty Work,
Useless Work.

KING OF ALL CLINCHER TIRE TOOLS.

EVERY CAR OWNER WANTS
ONE FOR CLINCHER TIRES—
WANTS ONE, NEEDS ONE, AND
WILL HAVE ONE IF YOU
CARRY THEM IN STOCK.

The trade is supplied through jobbers in every territory. If for any reason your jobber cannot make prompt shipment, send your order to us, and shipment will be made either through your jobber, or direct if necessary.

Marquette Tire Tools take the drudgery out of changing clincher tires. The Marquette is a REAL Tire Tool. It is positive in action, positive in its grip, and will not tear the tire. Use it a few times and you will never think of being without a "Marquette". It is to a tire what a screw-driver is to a screw. Not an accessory, but a NECESSITY. It is the ONE TOOL most needed in an emergency. There are thousands in use—ask any one who has used one and know for yourself of its value.

BETTER BUSINESS AT N. C. R. CONVENTION

The National Cash Register Co. at Dayton, Ohio, has been building up a reputation through a great many years for doing nothing half way, and for inspiring the members of its own organization, as well as the commercial world by the force of its very example for enterprise and innovation.

The recent convention of the N. C. R. Hundred Point Club is no exception to the general rule of the company's procedure. There are 440 members in the 1919 100 per cent club. Each of these men has sold 100 per cent or more of his year's quota in order to attend the convention. The slogan of the hundred pointers, adopted at the convention, was "Appreciative, but not satisfied."

Throughout the week the Big Idea as expressed by general sales manager, C. E. Steffey, was to become bigger, better, broader business men, to become a power for good in your home community, to give better service to merchants in all parts of

The 440 members of the National Cash Register 100% Club. These salesmen exceeded their quota in sales last year.

One of the features of the convention was a reproduction of two stores, one doing business on a cash register system, and the other on the "carry till doomsday" system.

the world. Many improvements have been made in cash registers during the past year, and a brand new model was placed on the market in January, 1920. Perhaps the feature of this new model is the fact that it prints an itemized receipt of the accounts when paid, as a receipt.

SALES THROUGH A STORE PAPER

The Radiator is the title of the house organ of the Arps Right Price Store at Nuola, Colo., which is issued bi-monthly, "with the selfish motive of increasing your hardware wants and incidentally defending our principles." Its news columns contain the views of the editors and proprietors in an interesting and frank style, and especially attractive goods are advertised. This store paper idea is one that a wide awake merchant cannot overlook.

E. O. Furlong is one of the enterprising hardware merchants of Colorado. He has opened a new store at Craig and has moved his business at Steamboat Springs to a fine new building.

STANDARD FOUR PLANS BIG YEAR

More than 100 per cent increase in production will take place in the factory of The Standard Four Tire Co., at Keokuk, Iowa, just as soon as additional equipment can be installed, according to F. R. Eyers, General Sales Manager of that institution.

"While the company has never aspired to big production," said Mr. Eyers, the other day, "we find that our present output of about 450 tires a day is wholly inadequate for filling our requirements. We are going to bring that production up to a thousand tires and a thousand tubes daily, just as quickly as the necessary equipment can be set up.

"The last six months have set new records in every way for the Standard Four Tires Co., and we feel that this is largely due to the quality of the tire we are turning out. That quality can be verified by the fact that out of 50,000 tires sold during 1919 there were only 263 adjustments—considerably less than one per cent.

"One of the features of the Standard Four policy that is very popular with the trade, is the fact that we are in position to furnish new distributors and jobbers, who order in large quantities, with a direct factory representative, who will assist them in establishing dealers for our product."

For the benefit of its distributors, however, two important factory warehouses have been established—one in Los Angeles for the advantage of the Far West trade, and another in Indianapolis, which has been made a large distribution center for Standard Four Tires.

\$500,000 BREWER-TITCHENER EXPANSION

At the last Directors' meeting of the Brewer-Titchener Corporation, at Cortland, New York, \$500,000 was voted for extending the manufacturing facilities of the company.

The plans include an addition to the forging shop, accommodating about twenty-five 3000 pound drop hammers and other equipment. Additions will also increase the output of the Bow Socket plant to 4500 sets a day. An up-to-date stamping plant will be built at the Crandal Stone Division, Binghamton, New York. All the added capacity will be available for operation by July, 1920.

WINCHESTER ANNUAL REPORT

The trade received during the last month with interest the report of the annual meeting of the Winchester Co. and the Winchester Repeating Arms Co., held recently.

Significant figures are of course reported as to the volume and nature of the business and the plans for the future. From April 16, 1919, when the consolidation of the Winchester Repeating Arms Co. with the Winchester Co. took place, until December 31, 1919, the close of the fiscal year, the earned surplus from the consolidation amounted to \$1,748,273.92. At the time of the meeting it was reported that the plan of giving exclusive sales of the new products to dealers was working out well, and that three thousand dealers had become stockholders in the company.

This is in line with the story which persistently carries, to the effect that it is but the beginning of a move that will finally circle the globe with Winchester stores. The sales and charges for the whole year were \$24,910,903, and the net profit \$3,004,023. The assets of the concern amount to \$30,317,989.22.

The liabilities cover miscellaneous reserves, including interest of stockholders in Winchester Repeating Arms Company other than the Winchester Company, \$1,636,184; capital first preferred 7 per cent, cumulative, 97,547 shares at \$100, \$9,754,700; second preferred, 6 per cent, 20,000 shares at \$100, \$2,000,000; common, 10,000 shares at \$100, \$1,000,000. Capital surplus—being excess of assets acquired over consideration given therefor—appropriated to meet carrying charges and expenses arising from the termination of the war, \$2,800,000; unappropriated, \$8,627,794.60. The current liabilities are \$2,751,036.

In a discussion of its financial arrangements, operating conditions, new products and marketing plans, the company says that its entire issue of eight millions of the 7 per cent W. R. A. Co., notes, which matured March 1, was retired from funds resulting from the organization of the Winchester Company. Both concerns are now entirely free from funded debt. The business has been turned from war work to a strictly commercial basis and to the development of new products and new lines of business. All its government contracts have been completed and satisfactorily paid—there is only a relatively small amount of items which are yet under adjustment. Following the war the company's business was rapidly turned to the commercial side and as a result the company has enjoyed the largest year of this sort on record.

Regarding the new industries the report says that in order to utilize that portion of the plant left idle by the cessation of war work, it is now making pocket knives, cutlery, flashlights and batteries, edge tools, wrenches, augers, skates, fishing rods, fishing reels, artificial bait and clay targets. In order to facilitate production of these items the company bought the Eagle Pocket Knife Co., of New Haven, Conn.; the Barney & Berry, Inc., of Springfield, Mass.; the Napanoch Knife Co., of Napanoch, N. Y.; the auger bit business of the Lebanon Machine Co., Lebanon, N. H.; the wrench business of the Page-Storms Drop Forge Co., Chicopee, Mass.; the clay business and plant of the Morrill Target Co., of Omaha, Neb.; the fishing business of E. W. Edwards of Bangor, Maine, and the reel and bait business of the A. B. Hendryx Co., of New Haven, Conn.

With the exception of the Barney & Berry skate plant and the Morrill Target factory, the plants have been moved to New Haven. The skate factory will continue to be operated in Springfield and the clay targets will be manufactured at a newly constructed plant in Chicago. The Omaha plant will most likely be abandoned.

In speaking of its new plan of marketing its new products bearing the brand "Winchester," the company announces the carrying out of the sales policy already mentioned to give these sales to dealers who have

taken up stock in the new company. On this point the company says: "The new products will be marketed through exclusive agency dealers, of whom at this date over 2,200 have become stockholders of the company and have entered into contractual arrangements to distribute its goods. The number of these dealers is being increased. In the larger cities the company is establishing its own retail stores. The first of these stores will be opened in March and additional stores will be opened as rapidly as possible thereafter. For the purpose of serving the exclusive agencies and the company's own retail stores, warehouses are being located at points strategically with reference to traffic and other conditions. The company's new plans are developing in a highly encouraging manner and progress made thus far exceeds expectations. Indications point to the successful accomplishment of this very large undertaking."

Winchester guns and ammunition will be marketed as in the past.

AIRPLANE RIDE FOR BIGGEST BUY

A novel contest was recently held by Streeter & Riddell, Inc., enterprising merchants at Van Nuys, Cal. With every purchase of a dollar during a month's time, tickets were issued for an airplane ride, making a circuit of the nearby San Fernando Valley. At the end of the month the votes were counted and the person receiving the largest number of votes was elected to make the trip.

The contest naturally greatly increased the sales of the Company, but it would not have been the success it was, had it not been for the extensive publicity and newspaper advertising, such as is reproduced herewith, which appeared in the local paper.

Such a contest as this is a test of enterprise, and though the goods or the firm were not mentioned in a single advertisement, it was aimed to bring the people to the store and sell them after they got there.

Say Folks!

We Need Your HELP!

Our great trouble now is to find a SUITABLE PLACE TO LAND and START FROM on our Aeroplane Trip.

If any of you people know of a GOOD SMOOTH STRIP, at least 200 FEET WIDE and 1/4 OF A MILE LONG, please be sure to let us know about it. The location must be available for the SIXTH (6th) DAY OF MARCH.

The Plane we will use leaves the ground at a speed greater than sixty miles an hour, hence the starting and landing space must be fairly smooth.

REMEMBER ONE VOTE FOR EACH DOLLAR PAID ON A CASH PURCHASE

The Contest will close Saturday Evening, February 28th, the Votes will be counted immediately thereafter, and the person receiving the largest number of votes will make the trip, or may elect someone to go in their stead

Now Hustle!!

TIRE DEALER

Profit for the dealer

STERLING TIRES have met extreme conditions in many lands. Stand on any public highway in this Country—or in foreign countries, and you will see them roll by, each one making a satisfied customer for the dealer who sold it.

A satisfied customer is usually a permanent customer. That is what you want and that is precisely what you will get, when you sell Sterling Tires!

One of the Oldest

THE "Sterling" is one of the oldest tires on the market—although the tire industry as a whole, is comparatively new.

For thirteen years now, we have been building tires of the best materials obtainable—and in accordance with the most scientific principles; we have carefully weighed every opportunity for improvement. Sterling Tires have always been sturdy, but today, they have greater endurance than ever.

We want wholesale distributors and retail dealers to write for full information.

What are their brake

SAFETY, Service, Economy for your customers and greater profits for you, all depend on the right answer to this question—What are their brake bands lined with?

Too many people wait until brakes refuse to hold before they give any consideration to this question.

Here's where you can make friends and extra profits. Speak the friendly word of warning before slipping brakes result in costly accidents. Tell truck owners that their brakes need re-lining with Johns-Manville Non-Burn Asbestos Brake Lining;—the lining that lasts longest and holds best, because it is made of the best asbestos, because it's

MANVILLE

EQUIPMENT

THE SPIRIT PASSES FROM A CHRISTIAN HARDWARE GENTLEMAN

In the words of A. C. Rulofson, "the hardware trade lost a fine, Christian hardware gentleman when Charlie Watts passed from this earth a month or two ago, after fifty years as a sound, healthy, earnest member of the Fraternity in the West."

Hardware men know that in few other fields or lines of endeavor there are to be found so high a type of citizens and men. The hardware conventions this spring have brought together in every state of the country the soundest men and most thorough going citizens.

Yet even among this superior group of friends and competitors in commercial affairs, there is occasionally a character whose personality seems to lend a certain atmosphere, charm and endearment to all his associations. Such a man was Charlie Watts.

He was brought up in London, and he had his introduction to the hardware field in a five year apprenticeship there. As a young man he came to the United States, and was attached to a prominent New York house at first.

In 1880 he came to the West and was a member of the old firm of Osborne & Alexander, leading merchants of tools and builders' hardware. For thirty years he served the same firm, continuing when George W. Alexander carried on the business.

Since that time his health has failed and he has lived a life of retirement. He lost his wife many years ago, so his later years have been only brightened by the friendship and respect of the many friends he has gathered unto himself through his years.

All in all, he was a genial, lovable character, a man of the highest standards and principles, who leaves behind him nothing but the warmest memories among those who knew him and the highest respect among those who knew of him. No greater honor can be paid to the memory of any man, and surely there can be no higher goal to which the young hardware clerk or merchant of the present can aspire.

The hardware department of the J. D. Halstead Lumber Co., at Phoenix, Arizona, has just been located at 624 West Van Buren Street, opposite the lumber yard. The department under R. H. Philabaum has been greatly enlarged in every line, particularly builders hardware.

FOR AMERICA

The Nicholson File Co. has sent for its yearly souvenir to the trade an attractive hanger, on which there is an impressionistic drawing of Theodore Roosevelt, under which appears the following text:

For America

"Though we may not always have agreed with his tenets, there was a point at which every one of us could be in perfect accord with the Great American. He was, first, last and always, for America. All that is left of him is his written word and his deathless spirit—yet it is a rich heritage.

"Where we find those who do not know, but wish to learn, the true meaning of Americanism, let us teach. Where we find those who will not learn, let us make it clear that there is no place in the sun in these United States save for the loyal citizen or the friendly sojourner.

"As this New Year begins, let us, each and all, dedicate much of our time, much of our energy, to the building of a greater Americanism, which shall become a mighty power for good within our own borders and wherever our nation comes in contact with the other peoples of the earth.

NICHOLSON FILE COMPANY."

MONTANA COMPANY EXPANDS

Work has started on a three-story brick addition to the Rynicker-Winter Wholesale Hardware Company's warehouse at Billings, Montana, to be built at a cost of between \$15,000 and \$18,000. Billings is the state headquarters for the firm, which does an extensive business throughout Montana and adjoining states. Rapid growth of the company's business made the addition imperative.

BLACK & DECKER IN CHICAGO

The Black & Decker Mfg. Co. has established a permanent office and show room at 1436 South Michigan Ave., Chicago. This is in charge of R. G. Ames, with a staff of ten men working from there to cover the middle west. The show window is redecorated weekly, and no pains or expense have been spared in making as attractive as possible the display of portable electric tools, electric air compressors and special machinery manufactured by the Black & Decker Co.

NEW MOUNTAIN STATE OFFICERS

At the recent convention of the Mountain State Hardware & Implement Association, the following new officers were elected: President, Chas. A. Wohrer of Des Moines, New Mexico; vice-president, E. D. Holmes, Caspar, Wyoming; vice-president, J. H. Adams, Delta, Colorado; W. W. McAllister, the veteran secretary of the association of Boulder, Colorado, was of course continued in office.

BENNETT BROTHERS RETIRE

J. W. Brockman, for a number of years at 520 Haight Street, San Francisco, has formed a partnership with R. H. Rusch and taken over the former location of the Bennett Bros. Hardware Store at 516 Market Street. Mr. Rusch was with Bennett Bros. for 32 years, starting in when a boy. For the last few years he occupied the position of manager of their Market Street store. Bennett Bros. have retired from business.

Charles L. Bell has purchased the business, stock and fixtures of the W. G. Ross Co., at San Bernardino, Cal. The stock of the present store will be increased to a great extent and new fixtures installed. The business will be conducted under the name of the Bell Hardware & Plumbing Co.

ZION CO-OPERATIVE INSTITUTION DISPLAYS TIRES

Here is a booth of the Z. C. M. I. at the Salt Lake Auto Show recently. The rubber man stood 10 feet high, with a weight of 600 pounds. The legs, arms and head were wound of water hose, and the hands are baseball pitchers' mits. A red, electric light tips off the brown paper cigar, and the goggles were a pair of headlight lenses.

On a table at the right is the son of the man, composed of two old tires with sections cut out of the sides. This demonstration naturally attracted much attention, and is only typical of the wide-awake methods of this great organization in the intermountain territory.

FURNACE OFFICIAL VISITS

Harry H. Morrill, of Morrill-Higgins Co., of Omaha, Nebraska, has made the rounds of the far-western trade during the month just passed. Morrill-Higgins Co. are known as manufacturers of Vacuum Pipeless Furnaces, being introduced to the Western trade by Alexander & Kuhn, Monadnock Building, San Francisco. During his visit Mr. Morrill added Arizona, Utah and Idaho to the territory of the western representatives. During his visit jobbers' contracts were made all over the territory.

Mr. Morrill started in making furnaces seven years ago and since that time 50,000 vacuum furnaces have been installed in the United States. For the far Western trade Mr. Morrill plans to announce in the near future a special bungalow furnace calculated to meet the peculiar demands of the climate and building construction of the far West.

The Coquille Hardware Co., at Coquille, Oregon, has been incorporated by Arthur Ellingsen, Huldo Ellingsen and William Bettys. The capital stock is \$15,000.

Clear, Penetrating Light with Absolutely No Glare

THE Raydex Shaftlight is beyond doubt the finest, handsomest spotlight made. That's the verdict of every dealer who has seen it. It is built entirely of silver, aluminum and brass and has a unique universal bracket that fits any car. It is equipped with full circular Raydex Glassless, Glareless Lens which throws a clear, penetrating shaft of light with a projecting distance that is unapproached. *And there is no glare.* The Raydex Glassless, Glareless Lens is made entirely of highly polished metal. Each lens contains more than 9000 separate metal reflectors which not only *eliminate all glare*, but actually concentrate and intensify the beam.

You get a perfect driving light—right *on the road* where you need it. The Raydex Lens is legal in every state. Distributors and Dealers will find the Raydex Lens an unusually attractive sales proposition. Send for sample.

RAYDEX

Thousands of Ford owners are asking for Raydex Reliners

RENEWING the lining on Ford transmission and brake bands has always been a hard, mean job. It has meant taking off the transmission cover, disconnecting the exhaust pipe—and in the new Ford models—removing the self starter, electrical connections and gears in order to reach and remove the transmission and brake bands.

Raydex Reliners eliminate all this once they are installed. You have to go through it the first time Raydex Reliners are put on a Ford—but *only once*. After that the transmission and brake bands do not have to be removed from the case and the work is reduced to *four* simple operations:

- (1) Remove handplate of transmission cover.
- (2) Pull out pedal.
- (3) Slip Raydex Reliner in the ample space between Ford transmission and drum.
- (4) Secure Raydex Reliner to original Ford band by reinserting pedal.

That's all there is to it. The entire job can be done easily—and in a very few minutes. Thousands of Ford owners have found that Raydex Reliners cut costs and keep their cars in continuous use.

Dealers and garagemen find them just as great a boon. They simplify the work—help them keep pace with the flood of such jobs in their shops. And then *there are the profits of selling and installing Raydex Reliners.*

They make a mighty good proposition to handle.

An Opportunity for Distributors and Dealers—one of the *few* real live ones!

And we help you make the most of it with an exceptional method of sales and advertising co-operation that is making big money for every dealer handling Raydex products. Write, wire or phone us for complete particulars.

AUTO CURTAIN LIGHTS

**Bow Sockets, Snap Fasteners
Forgings, Stampings, Etc.**

Our Improved Pioneer Automobile Curtain Lights dress up any car; many otherwise good appearing cars have been disfigured by the use of cheap looking stitched-in celluloid lights which soon turn yellow, become smeared and brittle and then break—a constant eyesore ever after; but with these Pioneer polished, bevelled plate

glass lights, handsomely framed, and in a variety of styles, sizes and finishes, enabling anyone to secure a perfect harmony with the individual design of any car, and which cannot get shabby looking, as they are so easily washed, the result is a permanently neat, distinctive and fashionable car. And so constructed that they will not give way, yet they are extremely light and require no extra top lining.

Number 144 Radiator Clip

This is the season when Hood and Radiator covers are in demand; therefore great interest in this clip. It is made from No. 24 gauge steel; length $4\frac{1}{4}$ in., width $\frac{1}{4}$ in. Furnished black enameled, complete with Back Plate.

Priced by the hundred.

WINDSHIELD CLAMP Number 140

Features: A substantial thumb screw or bolt, giving security when clamped to stub on Windshield frame. $\frac{1}{2}$ -in. Socket Hole, offset $\frac{1}{4}$ in. from base that rests on wood bow to center of socket. Slot screw hole, permitting of a side adjustment without changing screws if necessary to adjust.

Number 143 Back Stay

A secure and practical means of attaching the stay strap to the body of the car. The roller feature permits of ease in adjustment of stay strap and eliminates wear on same.

Slot for One-inch Web. Black enameled. Sold by the hundred.

LLOYD SALES AGENCY ORGANIZED

The Lloyd Sales Co. has been organized by A. T. Lloyd, who for the last thirteen years has been manager of the Baker Smith Co. at San Francisco. The new company will represent manufacturers of household and electrical merchandise, as selling agents for the Pacific Coast territory.

A. T. Lloyd, long a power among the manufacturers' agents in the West, who now heads the new Lloyd Sales Agency.

The Lloyd Sales Agency will hold to a strict selling policy in doing business only with the hardware and electrical jobbing trade, and among the merchandise which will be represented are the following items: Tungsten and Nitrogen Electric Lamps, Electric Lighting Fixtures and Portable Electric Lamps, Gas and Oil Heaters and Stoves, Gas Stove Tubing and Accessories, Fire Screens and Andirons, Brass Wares, Jardinieres and Smoker Sets, Imported Chinaware and Cut Glass.

The ability and enterprise of Mr. Lloyd is recognized by the western trade, by his long association in a similar line of work, and his friends are glad of his new opportunity for advancement and achievement under his own name.

Mr. Lloyd desires to hear from any reliable manufacturer, who is open for the Pacific Coast sales representation. Although most manufacturers are not soliciting any new business at the present time, the far seeing executives are preparing plans for the future, which will enable them to hold their business in the Pacific Coast territory, and build it on the lines that future development will warrant.

BLACK & DECKER PLANT SOLD

The Baltimore plant of the Black & Decker Mfg. Company, the birthplace of the Hex trademark, and all that it stands for, has been sold complete to the Diefenbach-Westendorf Mfg. Company. When Black & Decker moved to their new location at Towson Heights in the suburbs of Baltimore.

The new company was formed from old members of the city plant organization. They will continue the special machinery business, formerly carried on by the Black & Decker Mfg. Company, at the old plant. The Black & Decker Company will devote all of its energies to an endeavor to keep up with the demand for Lectro-flaters, Portable Electric Drills and Electric Valve Grinders, and a new product, the Loadometer, a device for indicating on the dash the amount of load carried.

W. J. BOTSFORD AT WALLA WALLA

Last month, in speaking of the growth of the Yakima Hardware Company, it was mentioned in the **HARDWARE WORLD** that W. J. Botsford had taken over the Walla Walla territory for the Yakima jobbers. Since then, we have been fortunate in securing this photograph of Mr. Botsford and hereby we introduce him to those members of the western trade who do not already claim him among their acquaintances.

Mr. Botsford has had long experience and contact with the Northwestern trade, through his connections with the Marshall-Wells Hardware Company and the Schwabacher Hardware Company. He is also a partner in Dyer & Botsford at Granger, Washington. His new work in the Yakima Hardware Company will not affect his partnership in the latter business.

It is a matter of mystery to the editor why it should be so difficult to secure photographs of the members of an organization when they are of the type of Mr. Botsford. We are sure that our readers join us in acclaiming his acquaintance through our pages. Although looks may not make the man, it is very seldom that such an appearance as that of Mr. Botsford does not lead to something better or to something equally good beneath the surface and within the heart.

NEW BUFFALO FORGE OFFICERS

At a meeting of the stockholders of the Buffalo Forge Company, new officers were appointed, as follows: Henry W. Wendt, President; Edgar F. Wendt, Vice President and Treasurer; Henry W. Wendt, Jr., Vice President and Secretary; C. A. Booth, Vice President and Sales Manager.

The new directors include the above named officers, and in addition, Mr. H. S. Whiting.

At its May convention, the American Hardware Manufacturers Association will take up the elimination of the practice of some manufacturers in designing by marks, labels, or in literature a size, weight, or count, that is not carried out in the article so marked, labeled or otherwise designated.

A. H. Ambrose, for the past eight years with the Associated Manufacturers Co., of Waterloo, Iowa, has become advertising manager for the Radiant Mfg. Co., of Sandusky, Ohio, manufacturers of light and power plants.

Carry the Lines That Carry With Them—

Profit, Satisfaction and Goodwill in most generous measure. Thousands of jobbers and dealers have found this combination in—

“BABY” Hammerless Revolvers

The “BABY” speaks for itself! It is just this size in proportion to the size of the hand—measures only 4 inches over all, weighs but 6 ounces, but it is a REVOLVER in every sense of the word. Shoots six, sure shot, .22-caliber, short, rimfire cartridges, yet it's perfectly safe to handle, for it fires only when the trigger is pulled all the way back. Push a line like that!

“HEXALL” Socket Wrench No. 5—8 Pcs.

“HEXALL” for every need. Every “HEXALL” is mechanically-perfect and gets to the seat of the trouble quickly and efficiently, no matter how far out of ordinary reach the repair may be. Handles are drop-forged; sockets made from the bar on automatic machines, broached and case-hardened. And, every “HEXALL” is sold under this guarantee:

BLACK & DECKER AT CLEVELAND

The Black & Decker Mfg. Company have further extended their permanent organization by the establishing of a branch office at 6523 Euclid Avenue, Cleveland. Garth A. Dodge, whose photograph we are fortunate to reproduce herewith, was formerly connected with the Austin Company at their Cleveland headquarters. Mr. Dodge has joined the Black & Decker organization in the capacity of branch manager for the states of Ohio and Indiana, and will be in charge of the Cleveland branch.

HOPPE'S SOLVENT HUNTER'S FRIEND

With the coming of the sporting season and the movement of firearms involved, western merchants will not want to overlook the opportunity of stocking Hoppe's Nitro-Powder-Solvent, said to be the only reliable liquid cleaner for high-powered rifles, shot guns, revolvers and firearms of all kinds.

The manufacturer guarantees that it is not made with acids, that it removes and prevents rust and positively prevents corroding. The retail price is 35 cents a bottle, and it can be obtained, together with sales literature, through the jobbers, or from the manufacturer, Frank & Hoppe, 2314 N. 8th Street, Philadelphia.

Lafe Hendricks has bought the stock and building of the Kinleyside Hardware Co., at Lakeport, Cal. The business will be conducted by Mr. Hendricks and his two sons.

Andy Austin, who for 17 years has been employed in the hardware store of Mills & Cowles, has purchased one-half interest in the business. The new firm name is now Mills & Austin.

The Farmers Hardware Co. at Whittier, Cal., held their annual stockholders meeting recently, and reports showed the past year to have been a profitable and successful one for the firm.

Booth & Herboth, prosperous hardware dealers at Marysville, Cal., have moved into their new quarters. The new hardware store is one of the most up-to-date in this section of the state.

SAVE YOUR FENDERS Merchant's Anti-Skid CHAIN TIGHTENER

Loose chains slap against fenders, marring and bending them and creating an infernal racket. Merchant's prevent this by gripping the chain at five points, giving an easy tension all around. Saves chains. Saves tires. A wonderful little accessory. Price per pair \$1.00. M. H. Merchant Corp. 236-8 Emma St. Syracuse, N. Y.

THE ROMORT AIR STATION

WILL BRING NEW BUSINESS TO YOUR ACCESSORY DEPARTMENT

For your automobile trade it is "Service" that is the begetter of increased sales in your accessory department.

Increased service means increased business.

You will find the new Romort Air and Water station a real trade trapper. With its electrically lighted globe it is on the job 24 hours a day, ever ready to serve your customers and prospective customers with a superior class of air and water service. It is a real creator of good will—a firm foundation in the building of a bigger and better business.

NEW METHODS SUPPLANT OLD ONES

The new Romort air and water station completely overcomes all the objectionable features of the dirty, grimy and usually broken curbstone air hose and the bothersome old water bucket.

EXCLUSIVE FEATURES APPRECIATED BY ALL WHO KNOW

With the new Romort Air Station the hose is held clear of the ground at all times. The hinged air pipe automatically returns to a vertical position after using, which prevents the hose from dragging in the dirt and filth. The flexible wire armor and the automatic air valve prevent kinks, breaks or short bends in the hose and there are no joints to leak, as there is one continuous hose from the tire valve to the base of the stand.

The new Romort Air and Water station is so designed that it may be used with an inside air tank or with an air compressor in the base.

Built in Four Styles.

No. 11 Curb Air Station.

No. 12 Curb Air Station with water.

STREVELL PATERSON SALES MEETING

The annual sales meeting of the Strevell Paterson Hardware Co. brought together recently in Salt Lake City, factory representatives from all over the United States, besides the members of the well known intermountain jobbing house.

These representatives talked about their respective lines to the assembled salesmen, giving the factory point of view, and inspiring and enthusing the men to increased sales and renewed energies during the coming year. At the conclusion of the convention, a dinner was held for the Strevell Paterson family, and we are fortunate enough to be able to reproduce this photograph of the gathering.

A TWO POUND FOLDING STOOL

To fill the need on every camping, fishing, automobile or boating trip, for a comfortable and economical place to sit, the Defiance Welding Co. offers its folding steel stool, with an all steel frame 15 inches high, and a seat of genuine army duck. The stool weighs only 2 pounds, and can fold flat in a space $7\frac{1}{2} \times 10$ inches.

It is said to be comfortable, strong, light and durable. This is item No. 1100 in the Defiance catalog, and it is listed at \$1.25.

Western merchants interested in an attractive accessory and sporting goods novelty line, would do well to get the Defiance Co.'s complete catalog from the home office at Defiance, Ohio, or from the Bailey Drake Co., Inc., 1120 Michigan Ave., Chicago.

The Dabney Hardware Company is a new institution at De Leon, Texas, one of the thriving new oil field towns.

N. W. Williams and F. M. Power have purchased the Everett & Co. hardware store at Centralia, Washington. The store is the oldest of its kind in that section of the country, and has always enjoyed a large business.

A BIRD CAGE BOOK

One of the most interesting trade catalogs of recent years is the 68 page catalog No. 41 of O. Lindemann & Co., 35-37 Wooster Street, New York. Established in 1863, O. Lindemann & Co. have specialized on japanned, brass and tinned wire cages for all manner of birds and pets. This catalog illustrates their complete assortment, 188 cages, stands and tables; also 120 cage sundries, feed cups and baths.

It has always been the Lindemann policy to work on the theory that the best goods are the cheapest in the end, and it is not so much a question with these manufacturers as to how cheap their goods can be produced, but how perfect their cages can be made.

They are the original inventors and patentees of brass cages, made without solder. They are lacquered with an article of superior quality to avoid tarnishing in any climate, and may be cleaned with cold water in the same way as japanned cages are cleaned. Every merchant with a general hardware line of course has business in bird cages, and no merchant can afford to be without this complete information on this standard line.

J. H. HANEY COMPANY DIVIDED

From Hastings, Nebraska, comes the announcement to the trade that J. H. Haney & Company, manufacturers of Rose Specialties, has been divided into the Rose Manufacturing Company and the W. M. Dutton & Sons Company.

The Rose Mfg. Company will continue making the Rose Tire Pumps, grease guns, grease buckets, fan belts and other accessories. The force remains the same and will give its undivided attention to the manufactured products which have become nationally famous.

W. M. Dutton & Sons Company will continue the old J. H. Haney & Company wholesale and jobbing business particularly along harness lines and manufactured specialties in that field.

The Baker Hardware Co., at Goldendale, Washington, have moved into their new building, which will give them excellent facilities for carrying a larger stock and an increased business during the coming year.

The Vancouver Hardware Club recently held its annual banquet at Hotel Vancouver, Vancouver, Wash. There was a program of music and recitations, as well as toasts by the various members of this progressive club.

**FOR HYGRADE
DEALERS ONLY**

Are you on our mailing list, so that you are kept in touch with the newest selling helps and ideas? If not, write us today.

**They Pay More to Make More**

"If," said a former dealer, "I can't sell Hygrade Lamps I won't sell any."

This frank statement came from a man who had tried lamps that cost him less than Hygrades and on the surface promised larger profits.

But, like 90 per cent of the other Hygrade dealers, he had found that in spite of the higher price paid for Hygrade Lamps he had made a greater net profit in selling them because the volume of business was so much larger and the complaints so few.

The Hygrade selling plan, too, makes it possible for any dealer, however small his total sales, to make a satisfactory profit from those sales.

Do you wonder that Hygrade dealers are willing to pay more to make more?

MUTUAL INSURANCE FOR WISE MERCHANTS

(By Chas. A. McKenzie, Western Manager of the Hardware and Implement Dealers Mutual Fire Insurance Companies)

Insurance is a very important factor in your business, and should receive the most careful attention. It is a remarkable fact when you consider how old insurance is, something which nearly every one carries, that so little is understood concerning the requirements of a policy holder, and the action taken by the first insurance company at the time of a fire.

Your policy is a contract which states clearly what it covers. Referring to the back of the policy, you will read the conditions which make a policy void. In case any of these conditions exist, it would be well to notify the company at once, to that effect, having proper clauses attached to overcome same.

It is absolutely necessary that the written part of your policies be identical; you will find this on the form inserted in the policy. For example, a dealer carrying groceries and hardware should be careful that part of his policies do not specify hardware without any mention of the groceries; such a mistake as this would make complications on an adjustment.

The Co-Insurance Clause

Some policies contain the co-insurance clause; this clause has no advantage, only offers a slight reduction in rate because of the fact that the company gets a larger portion of insurance than they perhaps would otherwise. Where this is made part of the policy it is necessary that you keep insured up to the required amount. If you were carrying the 80 per cent clause it would be necessary to insure to 80 per cent of the replacement value, not on what you have paid for the stock or building.

On stocks it will most likely be necessary for you to figure your inventory twice. One of the jobbing houses found that the replacement value was \$500,000 more than their cost and it was necessary to base their insurance accordingly. In case you are not up to the required 80 per cent, and should have a partial loss, you would be the co-insurer for the deficiency. It is not advisable to accept the co-insurance clause on stocks unless you keep a perpetual inventory or watch your insurance very closely. On a building the proper way to do is to have same appraised; these figures will be accepted by the insurance company during the life of the policies then in force.

Now let us pass the co-insurance clause and take up the matter of straight insurance, which is the kind generally purchased. To be fully protected you should insure your buildings to at least three-fourths the replacement value. Stocks can be insured to about the same figure

your inventory shows. At this time of year, stocks will be low and many items under-priced. Adjustments are made on the actual cash value so you would encounter no trouble in collecting your insurance if based on your inventory figures. This is true on an advancing market but not so with the reverse.

Office and Fixtures Mentioned

Be sure your office and store furniture and fixtures are covered as they are not considered stock and must be mentioned separately.

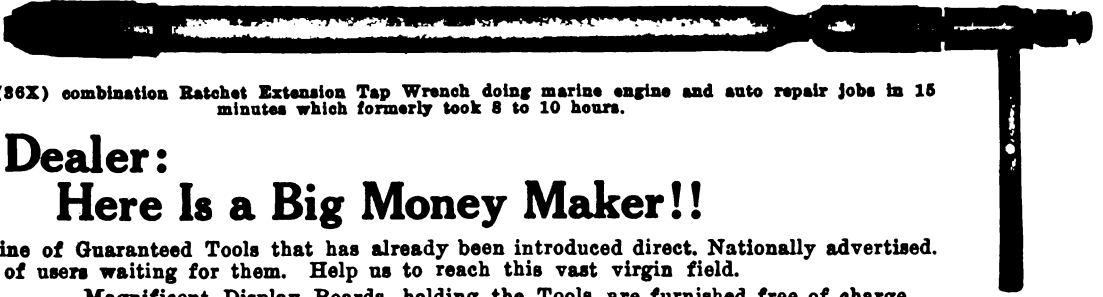

Occasionally I come in contact with a dealer who states that his rate is so high he can't afford to carry much insurance. A high rate is generally a good indication of a poor risk. No individual can afford to carry his own insurance; this is like insuring with a company who has only one risk on its books and no one would want to place his insurance with such a company. Your premium is a very small amount to pay out in proportion to a loss. A dealer having limited capital, is apt to affect his credit materially, by not carrying adequate insurance. Dealers can now place their insurance with the Hardware and Implement Mutuals at a saving of 50 per cent, or securing twice as much insurance for the same money they now pay out. These companies are absolutely reliable and have been doing business for many years.

Even though you are fully insured, you would be at a big loss replacing your stock, and opening up a new place of business. This all takes time and costs money. Remember you can deduct your insurance premiums in your income tax returns to the government, so why not buy the protection?

Furnishing Proof of Loss

There are some necessary bookkeeping requirements which are essential to furnish a satisfactory proof to an insurance company in case of loss. An annual inventory is the basis to start with. And if you have not taken stock for two or three years, you might just as well stop paying insurance premiums, as you would have a great deal of trouble to make up a proof in case of total loss.

Your books should reveal a complete record of all purchases, goods returned, freight paid, cash discounts taken, and daily record of all cash and charge sales. With these records an adjuster can easily determine the amount of stock on hand the day of the fire. By adding to your inventory the purchases less sales, deducting a percentage of profit, you have the amount of stock on hand. It makes no difference how these records are kept, but be sure your daily transactions are set down in some form and all records kept in a fireproof safe. This is very important and no merchant can afford to be without a good safe. A good book-keeping system is like the compass to the mar-

Farmers and Owners of Cars are Prospects

YOU who have in the past handled vehicles and wagons and have lost that profitable trade to the Motor Vehicle, are in a position to get the old volume and more back in handling "Utility Trailers" and without the necessity of giving service or having an expensive service department as is required where you sell motorized vehicles.

Every farmer in your community is a prospect for a Utility Trailer of some sort. Every motor truck running over your highways is necessarily a prospect for a Utility Trailer, if he is to compete with others using them, they bring truck operating cost down to a point where the profits are satisfactory, and truck operating brought out of the Red Ink.

Utility Trailers are motorless auxiliaries to the truck or passenger automobile, bringing you a clean profit when sold and a profit that is yours, not to be later paid out in shop costs of free service as in motorized vehicles.

We have some good territory open, write us for our proposition to dealers.

TWO OPPORTUNITIES FOR BUILDING NEW BUSINESS

THE merchant who has the knack of turning to his own account every possible assistance from outside sources, "cashes in" in a visable way.

The merchants who are taking advantage of the thousands of dollars in time and effort invested by Winchester in ways and means to increase retail gun and ammunition sales, are getting returns that are particularly gratifying.

For example, many dealers are telling us of their increased sales and profits since getting behind and pushing the Winchester Junior Trapshooting Outfit and the Winchester Junior Rifle Corps Range Kit.

The sales possibilities of these two Winchester items are unlimited. The high Winchester standard that you know so well is reflected fully in these Junior outfits. And the thoroughness you are accustomed to expect of the Winchester organization is being applied to the sales promotion of both.

DEALERS ARE MAKING PROFITABLE SALES

EXTENSIVE magazine advertising is being used to interest every member of the family in the Winchester Junior Trapshooting Outfit.

Advertisements appearing in boys' publications are accomplishing similar results for the Winchester Junior Rifle Corps Range Kit.

You are familiar with the national scope of the Winchester Junior Rifle Corps and perhaps with the field work we are doing in aid of trapshooting. We wish we could make you just as familiar with the results dealers get when they tie in with our efforts.

And these dealers are not only making immediate sales that pay profits today, but they are also creating new shooters, who will become enthusiasts and never cease buying sporting goods.

Do not delay any longer in getting your rightful share of these profits. We are ready to co-operate. Write us, and we will do so gladly—and speedily.

Write

H. C. COOK CO. - ANSONIA, CONNECTICUT

iner, and careful observance spells success and disregard spells failure.

In case of loss the first thing to do is to notify the Company by wire or in writing. If the local agent is notified, write a letter to each company carrying your risk. These may be handed to him. You have then complied with the requirements of your policy.

Goods Saved not Deducted from Loss

If not a total loss, immediately clean up the stock, drying such goods as will rust, and wipe with an oily cloth. Separate the damaged goods from the other stock, taking an inventory of both. Continue your business in the same manner, keeping track of the sales of all undamaged goods. Anything damaged is not to be disposed of until you have made settlement with the insurance company. Do just the same as though you had no insurance at all, and you will receive the same adjustment. Some people have the impression that any goods saved will be deducted from their insurance, this is erroneous. Your policies states you are insured against loss, so no deductions will be made for goods saved if they exceed the loss.

Don't overlook the home. Residence insurance is very cheap but you will find the replacement value now is very expensive.

THREADLESS NUT AND BOLT

John B. Zandecki, Forest, Washington, is the inventor of a new threadless nut and bolt, which is particularly calculated to fill a long felt want among wagon owners, machinists, or anyone who has to apply or remove nuts.

The present device does away with the threads, and does not require tools to apply or remove. If used on a wagon axle, the nut is slipped on the axle after the wheel, and the wheel is positively prevented from coming off. As is evident from the accompanying illustration, the device is simple, and by the use of a spring on the nut, two shoulders are engaged in grooves in the bolt until released by pressure of the thumb and finger.

Mr. Zandecki, the inventor, is a young man and a native son of the Pacific Northwest, having been born at Salkum, Washington. His life has been spent in contact with the agricultural and industrial problems of the northwestern territory, and he is a graduate of the Modern Auto and Tractor School at Spokane, Washington. The bolt has been patented by the inventor, and he is willing to sell his patent to anyone interested in the invention.

H. W. DeMuth has sold his interest in the Pasco Hardware Co., Pasco, Washington, to D. C. Gibbs. Earl James, who has been associated with the store for some time, will remain with the firm.

No. 3X GARDEN RAISER

Made in JERSEY CITY, N. J., by the
JOSEPH DIXON CRUCIBLE COMPANY

Established 1827

SALES VALUE IN WINDOW DISPLAY CONTEST

There are few things more interesting to a dealer than to watch the results of his window displays. The differing results in interest creation and in actual sales that follow the installation of various windows have settled the value and actual sales work that a good window can stand for.

To stimulate dealer interest in window display work and to help them to create displays that will have strong attention value and sales compelling results, the Winchester Repeating Arms Company instituted in 1918 its Fall Hunting Window Display contest by offering 41 cash prizes totalling \$1000 for the best displays put into windows during that season.

The interest created was beyond expectation and many remarkably fine windows, both as attractive displays in accordance with the terms of the contest, the enthusiasm shown by the dealers and the reports of greatly increased sales, the company announced a second contest along the same line during the hunting season of last fall.

Dealers from almost every state in the United States and Canada submitted photographs of their window displays in accordance with the terms of the contest. Again the sales curve of practically every store that entered the contest showed a remarkable upward trend as a result of the displays. One dealer wrote in that his entire stock of Winchesters has been sold out within ten days after he had placed the display in his window. Still another writes thus:

"Our 1918 Winchester sales far exceed any previous year, but this fall we sold three times the amount of Winchester products we sold last year."

Sales Effectiveness Increases

The most notable thing about the window displays this year was the marked improvement shown in the sales effectiveness of the displays over those submitted a year ago. At that time the judges found a splendid collection of windows from the standpoint of attractiveness and attention value, but a uniform weakness running through them in the matter of tying up sales value with these. Now in the judging of the windows the board of judges divided its work into three parts, giving 40 per cent for attention value, the ability to attract the passerby and to interest him; 40 per cent for sales value, creating a desire for the goods, and 20 per cent for general appearance, the artistic arrangement and selection of display material.

Whereas last year the judges found an average of 33 per cent for attention value and only 22 per cent for sales value, the board this year found the latter feature had come up so strongly that it was practically as good throughout the displays as the former. As the prime factor of a display is the sales compelling result attained, this indicates an important contribution to effective window display that has resulted from these contests.

Just as the contest was divided into classes last year, so it was again this year. In each class the prizes were exactly the same, but by the division dealers were enabled to compete against other dealers who were in

While it isn't every merchant who can make such a hunting trophy display as that made by the Belcher-Loomis Co., of Providence, R. I., in every locality there are resorts that are always of local interest to the people of each community, and any enterprising merchant can easily reproduce them, feeling assured that his efforts will be rewarded through increased sales.

Every Foot of
COLUMBIAN MANILA ROPE

can now be easily and positively identified on the dealer's floor or in actual use by anyone. This Rope, if a few inches are untwisted, will show imbedded in the heart of a strand a small twisted tape. Pulling this tape out and unwinding it brings to view the colors (red, white and blue) and the signature of the Columbian Rope Company.

Think what this means;- you have the tangible evidence in every foot of Columbian Manila Rope that it is made by this Company and, therefore, is guaranteed to be not only pure Manila, but equal and in most cases superior to *ANY* Rope made.

Mr. Dealer, teach your Rope customers to look for the red, white and blue marker; it means repeated orders for you.

EVERY
COIL

business under similar conditions with themselves. So a dealer in a town under 2500 population, listed in class D, did not have to try to outdo a dealer in a city of 500,000, who would naturally have a greater stock and a greater wealth of material at hand to make his display more elaborate and attractive.

The contest was divided into four classes: A for those in cities of upwards to 50,000; B for all in cities between 10,000 and 50,000; C for all in towns of 2,500 to 10,000, and D for all towns under 2500. In passing it might be stated that some remarkably fine displays were found from the many class D dealers who entered the competition.

The value of trying again and the result of the interest awakened by the previous contest is forcibly shown in the fact that the first prize in class A and the super-prize for the best window of all those submitted, was won by the Belcher-Loomis Hardware Company of Providence, R. I., whose display in 1918 had been awarded eighth prize in class A. The Belcher-Loomis display attracted great attention to their Westminster store in Providence while it was exhibited and had a marked effect on sales. This display was found almost as strong in sales value as in attention value and it was a strikingly attractive window to look at.

The display represented the interior of a log cabin in the heart of the hunting country. The log walls with the bark still on and the crevices filled with moss

in themselves transported the window gazer into the woods. At the back in a comfortable fireplace swung the big kettle that spoke of refreshment to the hungry hunter after the luck of the day had been decided. Above the fireplace was set a magnificent moose head flanked on either side by two fine deer heads. On the floor of the cabin was stretched a great black bear skin with head attached. Other trophies of the hunt, fine skins, ducks, game of various kinds, completed the wall adornments.

Only four guns are used in the display, but they are so arranged with the cases of Winchester ammunition which line one side of the cabin as to carry a vivid impression of the idea that they are exactly the things needed to bring home the results which the cabin so eloquently bespeaks.

It is a window which sells hunting on sight. It ties up Winchester guns and ammunition so completely with hunting that it sells the goods as the natural equipment for the man who wants to enjoy the sport the owner of that cabin has so evidently enjoyed.

Here are the winners of the entire list of 41 cash prizes:

Superprize, \$100.00—Belcher-Loomis Hardware Co.,
Class A

1. \$100.00—Belcher-Loomis Hardware Co., Providence, R. I.
2. 50.00—Ray E. Ellis Co., Wichita, Kan.

The Harlowton Grocery Co., of Harlowton, Montana, won the first prize in class D with this attractive display. While the photo doesn't do justice to it, it gives an idea of this excellent sales window. Photos of the displays in this contest will be shown in subsequent issues.

The purpose of the Winchester Window Display Contests is to stimulate dealer interest in window displays during the fall hunting season and to help him to develop effective sales display that will return him a harvest of largely increased sales and consequently increased profits. The educational value of this contest is shown perhaps most clearly in the fact that the Belcher-Loomis Company of Providence captured eighth prize in the 1918 contest in class A and in the 1919 competition landed first in that class and also carried off the super-prize for the best window of all those submitted.

Here are some of the evidences of the value of these displays received from the dealers.

Letter from Weed & Company, concerning display in their Buffalo, New York, store:

"P. S.—Frank statement, result not a Winchester gun in stock after ten day display."

"I have secured several different kinds of game birds, which were placed throughout the display, and I printed the sign Winchester ammunition gets them all. The display was in our window for two weeks, October 13th to October 27th, and during that time our sales

of Winchester arms and loads were increased over 200 per cent over any previous period."

W. STANLEY VEACO,
George W. Roberts Electrical Works,
Marysville, Cal

"As a hunting advertising medium, we feel that this window was a banner. Within three days after this scene was put in we did not have a Winchester gun of any description in the house. We even went to the expense of telegraphing your firm to forward some by express if possible. It has more than doubled the output of shells."

PEOPLES HARDWARE CO.,
Gary, Ind.

"I am sending you under separate cover a picture of our fall hunting window to be entered in your Hunting Window Contests. This, like all Winchester windows, has proved a winner when it comes to selling rifles and hunters' supplies. From the first day the window was put in our sales of these articles have been on the increase and this should prove one of the best seasons we have ever had."

L. K. BRADBURY,
Manville Hardware Co.,
Prince Albert, Sask., Can.

"This is a picture of our Winchester window this fall. It has been a big help to sell Winchester goods. This is a town of 800. W. R. Wingert is the window trimmer."

A. D. HOSTETTER,
Wellsville, Kan.

"We are sending you today via parcel post a photo of our Winchester window display, which we had in the last two weeks. We believe that this window increased the sale of guns and ammunition fully 50 per cent. Please enter same in your window display contest."

McGOWAN HARDWARE CO.,
Evart, Mich.

"We are enclosing two copies of our Winchester prize contest window display. This trim was run for a week and a half during the latter part of the hunting season. We are still perceiving the results from it in a very large sale of Winchester arms and products, in fact such a large demand as to keep sales ahead of stocks. The demand for .22 caliber guns, which it was especially to advertise, has shown a marked increase."

KIMBALL GUN STORE,
Tacoma, Wash.

"This window was run from October 8 until October 24, having certainly brought big results. Our 1918 Winchester sales far exceed any previous year, but this fall we sold three times the amount of Winchester products we sold last year."

I. C. SPRECHER'S SONS,
Ephrata, Pa.

MRS. HEP'S SAYINGS

I ain't never been able to see nuthin' so complicated, as they call it, 'bout life," observed Mrs. Jonathan Hep, as she stopped in the midst of work to rest, "fer ef you plays enuff to keep frum workin' all th' time—and works enuff to keep frum playin' all th' time, and acks durin' the day souse you ain't 'shamed of yourself at night—tha's all they is to it."

If you have an hour to waste remember other people may not be so wealthy.

NEW ALUMINUM FACTORY ON THE PACIFIC COAST

The Western Aluminum Mfg. Co. has purchased a large tract of land in Emeryville, California, and will start at once to erect a modern re-enforced steel and concrete factory, for the purpose of manufacturing full and complete line of aluminum kitchen ware, stamped, spun and cast.

It is classified that this plant, when completed will be the largest of its kind west of Chicago, both in magnitude of structure and volume of production. No expense will be spared in the construction, relative to convenience and comfort for the employees. Special consideration will be given to the welfare of the workers.

Inquiries from the trade throughout the West have been made requesting information relative to deliveries, prices, etc. This will be given at an early date and the expectation now is to have the line ready for the trade by June 1 next. Temporary offices of the Western Aluminum Mfg. Co. have been established at 207-08-09 Federal Realty Building, Oakland, Calif.

NOVEL UNIVERSAL SAFETY MAT

Shown here is the Universal Safety Mat—an absolutely new idea in running board mats. This is made on an entirely new principle from any now in use. The base is of highly polished solid aluminum. The nine heavy rubber ribs are tightly clamped by a patented process that they cannot work loose. These ribs are made of new live rubber, and are unusually high, forming deep channels that get all the mud and dirt off of shoes.

The Universal Mat is claimed to be elastic and practically wear-proof. It adds to the appearance of guaranteed to last as long as the car, and always keep its neat appearance. It is standard equipment on some of the highest grade cars. The list price is \$2.50.

If you set out to make your store attractive, do it along the lines of brightening influences rather than dull, dark decorative designs.

To be cheerful makes dull business seem better, and it helps to make it actually better. People like to do business with a cheerful man in a cheerful store.

“Why does the giraffe have such a long neck?” asks the teacher.

“Because its head is so far away from its body,” hopefully answers the boy.

LAWN REVIVERS POINT TO PROFIT

"Tickle Mother Earth, and be tickled by the results," says A. L. Richmond, distributor of the new Walker Lawn Reviver, announced elsewhere in this issue of the **HARDWARE WORLD**. Such a simple and clever device is certain to appeal to the dealer with a line of garden implements. Every owner of a lawn should be a prospect for a Walker Lawn Reviver. Each step taken, with the Revivers attached to one's shoes, drives the spikes down among the roots of the grass and allows air and moisture to enter with new life.

The retail price of the Revivers is \$3.00, and the dealers' proposition is very attractive. Those interested can communicate with A. L. Richmond, 149 Valencia Street, San Francisco, California.

H. J. GUTE INTRODUCING EASY WASHER

H. J. Gute & Co., western representatives for the Syracuse Washing Machine Corp., are announcing the Easy Washing Machine to the trade of the West. So rapid has been its development that they are now erecting a 25-acre plant at Syracuse, New York. The entire plant will be equipped with new and modern machinery. Production will be on the progressive or unit system, so that the raw materials will move forward from the stock room through the various phases of production to the shipping department.

The Easy Washer Machine is radically different from the other washers, in that it operates on the vacuum or suction principle. Two vacuum cups, inside the tub, move up and down at the rate of 60 times per minute, taking a new position on each downward stroke.

The Priscilla Ware Aluminum, which H. J. Gute & Co. are introducing to the western trade, speaks for itself, and is absolutely guaranteed to be the very highest grade merchandise obtainable by the distributor. The western representatives also guarantee that the factory can make shipment within 30 days, which is of course a great concession at the present time.

"I think your husband dresses so nicely and quietly."

"Really? You should hear him when he loses a collar button!"

The reason that it is more difficult to see opportunity going away from us than coming toward us, is because we do not recognize the visitor as opportunity until someone else names him for us.

NEW STYLE ACME FRY PAN

The long expected, new style Acme Fry Pan of the New York Stamping Co., has been shipped to the trade, and is now available in all nine sizes. The feature of the new pan is a one piece cold handle, doing away with the necessity of an overlaying tin handle on the pan. The new handle is connected with the pan by a broad, shallow, bridge, and the handle curves over with a hollow channel underneath for the passage of air.

In the western territory the new Acme Fry Pan is to be handled as always by the William P. Horn Co., with main offices in the Rialto Building, San Francisco, and branch offices in Los Angeles, Portland and Seattle. The Seattle branch has just been added, and J. C. de Garmo, with offices in the L. S. Smith Building, will represent the William P. Horn accounts in the far northwest. Mr. de Garmo has behind him long experience and wide acquaintance in his territory, and he is a fortunate addition to the forces. George Killeets continues to represent Mr. Horn at Portland, W. A. Stone handles the San Francisco territory, and W. E. Graham is in charge of the Los Angeles office.

ROOTING FOR THE JIMMY WEEDER

Merchants who want just the little article to place on their counter and supply the customer with the very little thing he has been looking for in addition to what he came in to buy, will be interested in the Jimmy Weeder made by the Taylor Manufacturing Company at Canton, Ohio.

It is a patented device built of steel with turned wood handle. It has a 3-inch digging blade shaped so it will enter the earth as easily as a sharp pointed knife. After the blade has been inserted in the ground and the spring fulcrum comes in contact with the turf, by pressing back on the handle, you get a powerful leverage that with a few minutes' practice will allow you to bring out the entire root without disturbing the sod.

Don't sidestep responsibility. If you use any footwork at all step up to it.

The vicissitudes of fortune are the stepping stones of the wise man.

7 out of 10 shooters use

193

Quicker Turnover—Bigger Profits

MORE shells loaded with Du Pont Powders are sold than all others combined. *Seven out of ten shooters use nothing else.*

Put these fast-moving shells on your shelves and cut out the dead ones. Carry the complete Du Pont line and you reduce the number of different loads you have to carry 75%—your stock will move out more rapidly and your turnover will be faster.

The Du Pont Company has been making powder for 118 years. Their long experience and great resources are your guarantee that their products are the best that can be made. They have a plan for boosting sales in your vicinity. Ask for details—and, on your next order for shells,

Specify Du Pont Powders.

Sales Dept.: Rifle and Shot-Gun Powders Division
Wilmington, Delaware

Plumbing and Heating

TRADING AMONG FRIENDS

When an artisan builds a home for himself, he patronizes his fellow-workers. A plumber, for instance, decides that he will cut loose from the landlord and his annoying ways and have a home of his own. He hires some cellar diggers, masons, carpenters, plasterers, tinnermen, lumbermen, quarrymen, etc., to help him; that is he hires them indirectly. He doesn't negotiate with each craft separately but gives the job to some contractor and builder specifying that he will take care of the plumbing himself. The builder brings on the job the necessary materials and labor, but the big point to remember is that labor gets the big end of the money the house costs.

Why then should the plumber demur at the high cost of building? His friends in the building trades, the men with whom he is associated every day on other peoples' jobs, get most of the money he pays. He is helping these men and their families to live according to modern American standards of living.

And when the carpenter or the mason builds his home, he squares accounts with the plumber by giving him a job on his house at the prevailing 1920 scale of wages. It's just trading favors and on an equal basis all around.

What causes all the trouble, what makes so many men hesitate to build is wrong reasoning. The plumber thinks he should have the 1920 wage for his work, but feels he ought to have his house for about what it would have cost in 1913. That's only another way of saying he thinks his building trade friends should work for 1913 wages. Well, maybe they would be glad to do it, if the plumber when his turn to work for the carpenter or the mason on their homes would work for them at 1913 wages.

But why quibble over so simple a matter? What's the difference whether a plumber receives four one hundred cent dollars or eight fifty-cent dollars for his day's work? What difference does it make whether his house costs 4000 one hundred cent dollars or 8000 fifty cent dollars? Just remember that these good old U. S. A. are now on a fifty cent dollar basis and you won't go wrong. Don't hesitate to pay

two of your fifty cent dollars for what you used to buy for one of the hundred cent dollars. It's really the same thing except in your own mind.

If you have regarded the plumbing and heating trade as a young man's job, you have been thinking that workmen just naturally graduate into positions as bosses or managers as they get older—without regard to whether they deserve the advancement or not.

Your trade is a job for a man who knows how, and after a score of years of experience you ought to be able to do better work and give better satisfaction to the people who have the work done.

Fit yourself physically now for continuing to work as long as you live. You want to wear out, not rust out. Fit yourself mentally for doing better work, for handling your work more intelligently every year you work at it. You can make yourself so good that at 50 or 60 or more your services will be in demand by the best men in the trade in your town.

RENEWING METAL LACQUERS

Dealers in lighting fixtures, plumbing supplies, hardware, metal beds, etc., sell a great many lacquered goods. After a time the lacquer wears off, especially in case of articles subjected to wear or much handling. When the metal is exposed it oxidizes and loses its attractive appearance. At this point many customers register complaints re the quality or durability of the goods.

The best answer to these complaints is the suggestion that the customer purchase a package of the same lacquer used on the goods when new. It is obtainable in combination packages, with thinner, sponge and brush; also directions for applying it. These directions are simple and easily carried out.

Dealers in lacquered metal goods should have on sale the relacquering materials. There's a profit in them, and the complaining customer is better satisfied if she can get them at once than if she has to hunt around several stores to find what it is suggested she use to renew her pieces, whatever they may be.

TRIMONT MFG. COMPANY

ROXBURY (BOSTON), MASS.

Here is a window of plumbing fixtures made by Wells & Wade, at Wenatchee, Washington, which would appeal to the architect, the home builder and the housewife. Instead of strewing a number of fixtures over the floor of the window, here we have a representative selection of fixtures as they appear installed under the most modern and advanced conditions. Surely if the instinct to buy can be engendered by the visible representation, such a motive has been induced by this window. It is to be noted that the representative fixtures in all lines, the kitchen, the bathroom, and the laundry, have been included. The "Hardware and Plumbing World" is always eager and anxious to reproduce just such trims or displays by any of its readers, or by any of the members of the trade, for the sake of its interested readers.

NORTHWEST LOSES PLUMBING LEADER

With the passing of James Beggs, the Portland Master Plumbers lost a stalwart member and the plumbing trade of the Northwest was robbed of a spirit that was always active and valuable in his thought and support. As typical of the feeling for Mr. Beggs in the trade, the following resolution was adopted by the Tacoma Master Plumbers and Heating Engineers Association and conveyed to the Portland Association of Master Plumbers:

"Whereas, Our esteemed co-laborer and friend, James Beggs, has been removed from the scenes of Earth, and,

"Whereas, Our long acquaintance with Friend James Beggs has greatly endeared him to us as a gentleman, and an honored member of our profession, and,

"Whereas, The cause of our endeavor has lost an able and distinguished member, who devoted his energies and talents to the furtherance of our profession, and that we received both inspiration and encouragement from his wise and kindly counsels,

"Therefore, Be it resolved, that we Master Plumbers and Heating Engineers Association of Tacoma express our deep sorrow that we have lost our friend and professional associate, and that the cause of our trade has been deprived of so wise and able a craftsman,

"And further, that we extend to you and the bereaved family our heartfelt sympathy in this great sorrow.

F. C. GROSSER, President.
A. M. GODDARD, Secretary.

Dave Powell, plumber at Colfax, Washington, is moving his shop from the Barroll & Mohny Building to the Grobe Building.

Business is more or less of a grindstone. Some people are sharpened and made wonderfully keen, and others are marred and dulled by the same turn of the wheel.

Chas. McDonald has opened a plumbing shop at Wilhows, California, and is prepared to figure and take jobs for any work in his line.

A new plumbing firm has been established at Modesto, Calif. The firm is composed of J. E. Noonan and J. Fowler, and will be known as Noonan & Fowler.

Two new plumbing establishments have been organized at Yakima, Washington. Chas. Wiley will conduct his own shop and the Yakima Plumbing and Heating Company has been organized by Fisher and Drinkwater.

Lon Stultz has commenced the erection of a new two story brick building at Charleston, Wash., the first floor of which will be occupied by his plumbing shop. The building will cost approximately \$10,000.

About 100 Pasadena, California, plumbers recently banqueted, with Adolph and Robert Mueller of Decatur, Illinois, large plumbing manufacturers, and Albert Keveney of Chicago, prominent publisher, as guests for the evening. President Wm. F. Creller of the Plumbers Union, was toast-master at the banquet.

A. J. Wheeler & Sons is one of the oldest and busiest establishments at Corning, Cal. S. A. and W. St. Clair Wheeler, the two sons, are associated with their father in the business. They are doing an excellent business in installing irrigating and water systems, heating, plumbing and sheet metal work, with experienced mechanics in charge of the work.

Following are the officers of the Pasadena Plumbers Association as elected at a recent meeting: President, Denneth Frazer; Vice President, Larry Johnson; Recording Secretary, Ray Patterson; Financial Secretary, Henry Alden; Past President, Paul Benner; Sentinel, Ralph Holmes; Executive Board, Robert Clapp, Arthur Creller, Joseph Hayden, Daniel McLain and Harry Mayhew.

When You Are Fifty

WHO is going to want your services when you have rounded out half a century? Are you going to be the kind of plumber or contractor or employe who will be worth more wages and increasingly useful on the job when you get past 50, or are you going to be the kind who will be dropped as soon as the first gray hairs appear? asks Frank Farrington.

When they begin to say of any business man, "He isn't as young as he was once," there are more or less people who begin to think, "Well, Bill is a good old scout all right, but you can't expect to get the same up-to-date service from these older fellows. It takes the young men to adopt the modern methods.

Up to You

It is squarely up to you whether you are valued more at 50 than you were at 30, or whether you are thrown into the discard as soon as you get to the point where you know the trade thoroughly.

At first thought the young fellow in the 20's and 30's says that this fifty years stuff doesn't concern him, that it will be time enough to worry about age when age comes. The younger men think that by the time they are 50 they will have businesses of their own and will be so well established that nobody will care what their age may be.

It is easy enough to believe all that when 50 is a score or more of years ahead and when we are filled with ambition and confidence. But it is worth while, even in your 'teens, to give a thought to what is going to happen when you get to 50.

For one thing, 50 comes a good deal sooner than you expect, and out of a hundred plumbers, clerks and workers in that line or similar lines, who think that at 50 they will be their own boss and financially safe enough, most of the number will be disappointed in that respect.

They will be disappointed for the reason that the law of averages is against a large percentage of them growing into successful business owners. And the law of averages is against them because the average man does not work hard enough or use enough intelligence. He does not deliberately fit himself to be something better at 50. He does not look ahead. He takes things as they come.

There is nothing the matter with the plumbing and heating trade for a man in the fifties and sixties, as employee or employer. The experience and judgment and intelligence of a man of many years in the work ought to be worth a good deal in that trade. Such a man may be the most desirable of all workmen, and he certainly is a better manager of such a business than a young chap who has not been all through the mill.

As an employe your age certainly is not going to exercise any arbitrary influence upon the situation. You will not be fired simply because you have reached your fiftieth birthday. If you are dropped at 50 it will be because you are not good enough. Others crowd you out, not because you are 50, but because they are better employes.

In the first place, if you expect at 50 to be able to hold your own with younger men, it is important that you take care of your health in order that you may not be a broken down old man at an age when you ought to be physically fit for a good day's work and mentally superior to any of the younger men.

Of course you should take care of your health for the immediate value of good physical condition, because you cannot be a hundred per cent efficient in your present work if you do not feel fit, but especially important is the physical preparation for your later years.

Whether you are going to continue the plumbing trade or retire and live on your wealth, you want health at 50 or 60 more than you want it now. What pleasure can you expect to get out of plenty of money and a score of years of life after 50 if you have to live with one foot in the grave and the other in a sanitarium?

You take out endowment life insurance so you may profit financially by it at sixty. Is it any less important that you invest carefully in health for use later?

Depends on Yourself

Whether you are wanted at fifty or not will depend first upon your being physically fit to do the work. It doesn't matter how much you know or how valuable your experience if you haven't the strength to make use of your ability.

Of course you will not be expected to show the pep of a young fellow of twenty. The younger man's great asset is his youth, his enthusiasm and his ability to learn.

We hire a young man of no experience because of what we think he is going to be. At 50 you must have developed the ability the young man is expected to develop and you should be cashing in on it by that time.

At 50 you ought to be able by reason of your experience, to do more work than a twenty-year-old because you can do it the best and the quickest way and make the least mistakes. The energy and the ambition of the twenties ought to be more than offset by the wisdom and judgment of 50.

If at 50 you have fairly good health and have not lost your nerve, you ought to be prepared to tackle any proposition. You should be able to get more business, make better sales,

PITTSBURGH WATER HEATER COMPANY - - - PITTSBURGH, PA.

secure more contracts. You should by that time know how to handle people as well as how to handle tools. You should have acquired such a knowledge of the trade as would make your opinions and your advice valuable enough to be sought by everyone. Any prospective customer with good sense knows that a young man in the trade has much to learn about it, and you have the advantage of the youthful competitor, or the beginner in the work.

You can just as well have people coming in and asking to do business with you, and sending their friends to you, because "He is an old experienced plumber," as to have them turning away with the thought, "I don't want to do business with that old fossil."

As a business man, a good deal is going to depend upon your appearance, upon your looking prosperous and business-like. If you are shiftless about your appearance, you will be regarded as a second-rater. The habits you are going to follow when you get a business of your own and have to meet men who come in to discuss business will be the habits of your younger days.

If you don't think it worth while to clean up and make a good appearance now when you go out on the street on other errands than rough jobs, if you are always perfectly satisfied to go about during working hours looking like a coal heaver just off his coal pile, you will be very likely to feel no interest in your personal appearance when at 50 you are trying to hold down the selling end of the work. Dress for your work; yes, but don't over-dress the part. Don't look black and grimy when there is no need for it. No one is going to think more highly of you or your work because you get just as black as you possibly can while on the job.

The Exeter Plumbing and Sheet Metal Co. have leased a new building at Exeter, Calif., to which they will move their business. They do a big business in plumbing and sheet metal work, and this move will give them facilities to take care of their rapidly growing business.

are the three essential points each mechanic must consider carefully when purchasing tools. Some mechanics overlook these points, yet they try to compete with their more progressive competitors. Experience has taught many that such an undertaking is unsuccessful. You must buy the best to get the best results.

Merely as a suggestion, try the "Always Reliable" when you again need torches, furnaces and braziers. You will then, also, be on our large list of satisfied users.

Your nearest jobber has our goods in stock or will stock them for you.

OTTO BERNZ CO., Newark, N. J.

WHAT HAPPENED TO THE DIRECTOR WHO DID NOT DIRECT

(Copyright by Elton J. Buckley)

Not long ago five men, all from small towns and cities, gathered in my office on business connected with the formation of a corporation. They were all men of affairs in their home towns. One was a large hardware dealer, one an insurance agent, one a doctor, who also ran a drug store, the fourth had a large automobile agency and the fifth lived on the proceeds of extensive real estate holdings.

I had just been reading the decision in a case which I will discuss presently, and, after the business was over, I asked them this question: "How many of you men are directors in some company?"

They all were. One had to think hard before he knew, but finally remembered that he was a director in a local brewing company. One was a director in his local bank, and always attended the meetings because it was to his business interest to do so. A third was director in a creamery company and never attended any meetings, a fourth was director in a real estate promotion company and never attended any meetings and the fifth—he was the man who had forgotten entirely—recalled that he was also director of a little company operating a hosiery mill in his town. He never attended any directors' meetings either.

My observation is that the more successful a business man is in his home town, the more certain he is to be asked as a director of something. Sometimes he attends the meetings and knows what is going on, but more often he never attends them and does not know what is going on.

My mind was full of the case just decided, which involved a friend of mine, and I told these five men the story of it. For the same reason I tell it here to the many thousands of business men who read these articles.

This friend, whom I call Fitz, was also a business man who because of his success, had been asked to become a director of a real estate and insurance company. Fitz was an intimate friend of the president of the company and had some banking connections with him. He was invited in out of compliment and to have the prestige of his name, with the promise that he "needn't bother to attend any meetings, the rest of us will attend to that."

And he didn't attend any of the meetings, except one, though he remained a director for six years. At the one meeting he attended, a dividend was declared, after a statement of the company's financial condition was rendered by the treasurer. Fitz, believing the statement, voted for the dividend, which amounted to nearly \$3,000.

681 Market Street, San Francisco.

Later it was found that the company had been very badly mismanaged, and that it was actually insolvent when the dividend was declared. The creditors of the concern then sued Fitz and other directors on the ground that they had sat by and allowed the business to be mismanaged, and had dissipated its funds, already too small to pay its debts, in illegal dividends. Fitz defended on the ground that he took the word of the officers of the company as to the condition of the company, and that he had no personal knowledge. The court said that was where he was derelict, being a director he should have had personal knowledge. And they made Fitz pay back all of the \$3,000 dividend out of his own pocket. This was the core of the decision:

1. Directors of a corporation are liable to the corporation and its creditors for failure to exercise reasonable and ordinary skill and diligence in conducting the business of the corporation.

2. One who suffered himself to be elected and continued as a director for over six years without giving the corporation's business any attention, and who, at the only directors' meeting he attended, participated in the declaration of a dividend, which impaired the corporate capital, without knowledge or investigation of the company's affairs or report of the business or financial condition of the corporation as required by the By-Laws, and in the face of the fact that it was then necessary to borrow money to meet current expenses and when a reasonable investigation would have disclosed the absence of net earnings, is guilty of such negligence as to render himself personally liable to the corporation and its creditors, since such conduct constituted a breach of trust.

I find that very few business men know clearly what they are taking on themselves when they consent to become a corporation director. They are flattered at the invitation, especially when it is coupled with the pleasant statement: "We only want the advantage of having your name; you needn't pay any attention to the matter at all." And that is true—a director needn't pay any attention to the business of the company, but if he doesn't, he is in very grave danger of being held personally responsible for the loss resulting from the company's mismanagement. Not for any share of it, but for every cent, if he happens to be the only one financially responsible. Directors are provided to direct, not to sit back and let somebody misdirect.

"What happened to that fellow, Jones, who was stabbed with a pair of scissors the other day?"

"He died of sheer exhaustion."

William Fisher and Edgar O. Drinkwater will open a new plumbing shop at Yakima, Wash., which will operate under the name of the Yakima Plumbing & Heating Co.

W. H. Gibson and Mr. Farrer have purchased the plumbing establishment of Busch & Busch at Bishop, Cal. Both are experienced plumbers, and expect to do a large business in their line.

AN ALPHABET OF SUCCESS

A—A—A

Always striving to do my very best, hour by hour, and day by day, remembering that life is not lived or achievements won in large chunks, but rather in infinitesimal portions of seconds and moments.

B—B—B

Being strictly observant of the rights of others as well as myself, remembering that the Golden Rule is a never-failing law which, if obeyed, brings happiness and satisfaction, and if disobeyed, invariably leads to selfishness, loss of friends and disaster.

C—C—C

Counting myself happy and fortunate to have difficulties and obstacles to overcome, in order that I may develop my own strength of character, executive ability and reasoning power. Not that I for one moment think that others are offered upon the altar of my possible development, but rather that others who meet me are caused to cross my pathway that I may have an opportunity to serve.

D—D—D

Doubting not for one single moment that life is a great preparatory school for the boundless future which we will all enter some day; and believing thoroughly that if I live in harmony with the Inevitable Law, that I will manifest through my own being, life abounding, joy, and financial success, for every human being is a spark of the Divine—the source of all power and the storehouse of all energy and riches.

E—E—E

Everlastingly working to the end of bringing into actual reality, the blue prints I have made out, of what I want my life to be and to accomplish, for if I drift I shall get nowhere in particular; but if I labor and march with a definite goal in sight, I shall at least make part of the journey, and perhaps I shall reach the point for which I fared forth.

F—F—F

Forgetting the seeming injuries and injustices met from time to time, except to be deeply thankful that I am the subject of such injustice, rather than the perpetrator; and being thankful that I have the chance to show the godlike spirit in me by returning, cheerfully, good for evil.

G—G—G

Going out of my way to bring help to the needy, and to gain for myself further light and help upon the everyday problems which I am called upon to meet; not forgetting that I am oftentimes in danger of becoming so calloused to the commonplace that I fail to see the romance and opportunities of everyday life.

H—H—H

Hearing respectfully to those who have truth to offer, and whose experience can save

me from error, grievous blunders and sad waste of precious time.

I—I—I

Intentionally using every means in my power to broaden and improve the worth-whileness of my own character, by business service, and my home life.

J—J—J

Judging others as kindly, sympathetically and tolerantly as I hope they will judge me.

K—K—K

Keeping myself in fine physical condition, that the real I need not be handicapped by a poorly adjusted, out-of-order, ineffective piece of physical machinery.

L—L—L

Learning consciously and humbly the lessons of everyday, that I need not repeat the second time the errors I have made the first time through ignorance.

M—M—M

Making every day count for all it is worth, in view of the fact that no day can ever return, and no money can beg, borrow or buy one to take its place.

N—N—N

Noticing closely the relation of cause and effects which make for success and failure, happiness and unhappiness, friends and enemies, wealth and poverty, in those about us.

O—O—O

Observing a proper distribution of the days and hours of the week, for there is such a thing as intemperance in work, intemperance in pleasure, intemperance in business absorption. The man who has not time for reasonable recreation is poor indeed, although he has millions; and the one who disregards the Sabbath and its observance is setting a bad example to others and is losing himself more than he can possibly realize.

P—P—P

Paying every obligation promptly, whether it be social, moral or financial, remembering that I have a duty to family, to employes, to neighbors, to community and to the nation to which I owe allegiance.

Q—Q—Q

Questioning carefully the soundness of every business proposition presented to me that I may make no mistakes which will cloud my days or make anxious the future.

R—R—R

Respecting and giving honor to those to whom respect and honor are justly due.

S—S—S

Smiling as often as possible and looking for pleasant things and humorous ones to smile and be cheerful about; always being careful that smiles are good-natured and leave no sting in the heart of anyone.

T—T—T

Teaching those about me the best I know, by setting the right example of promptness, efficiency, earnestness, thoroughness, persistence and consistency.

U—U—U

Using all of my leisure time in such a way that it will build me up and strengthen me for the business hours which lie ahead.

V—V—V

Venturing only into safe paths, for experience and observation have taught me that to go security for another man; to invest my hard-earned dollars to finance a stranger's proposition, or to take any risks of any kind which can be avoided is exceedingly poor business.

W—W—W

Watching carefully the details of my business and my personal affairs, not necessarily attending to every item myself, but holding somebody responsible for attention to these points, that my success shall not be undermined by slow leaks.

X—X—X

X-ing out the weaknesses in my own life and business administration with firm hand and mind as I meet them, recollecting that most of the failures I have met have been caused by people who always justified their own faults and clung to them tenderly, never admitting—even when convinced—that such faults existed. It takes a strong man and a determined char-

acter to say, "Here is a word, or a habit, or a practise which mars the symmetry of my life page. I will X it out for ever!"

Y—Y—Y

Yielding to impulses of kindness, generosity and the inclination to accept a reasonable amount of civic responsibility, that I may give as well as gain.

Z—Z—Z

Zealously guarding my reputation from all which might blemish or mar, for the good opinion of the people with whom we live is worth gaining and holding, but never worth sacrificing principle to win. In the end, however, the man who is honest and has the courage of his convictions, will be recognized as a man's man, a man among men, and a captain in his own particular line of industry.

SHADOWS OF HISTORY

"William the Conqueror," read the small boy from his history, "landed in England in 1066 A. D."

"What does A. D. stand for?" inquired the teacher.

The small boy pondered.

"I don't exactly know," he said. "Maybe it's after dark."

Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

C
E**

How often does the motorist stop for "Gasoline and Air?" With the Black & Decker air-cooled Lectroflater you can supply both at the same time—summer or winter. Avoids loss of time "jockeying" the car to a fixed air station, outside or inside the garage.

The Lectroflater Portable Tank Outfit can be left outside to attract trade even in zero weather. Being air-cooled it can not be damaged as there is no water to freeze up.

Four years ago Campbell's Garage, Towson, Md., installed a Black & Decker Lectroflater Tank Outfit, which is still going strong. This picture was taken at the front of Campbell's Garage, December 18, 1919, when the thermometer stood at 6° above zero. Convenient outside service was possible because the Lectroflater is air-cooled.

**An "X" LIQUID Repair
in a cracked cylinder stands
2,000 pounds pressure!**

SOME men are quick to judge the things they **don't** know by the things they do know.

Perhaps they know all about the harm that radiator cements, flaxseed meals, etc., do to the cooling system; and they think that "X" Liquid is some similar "dope"!

They ought to get the **facts** straight!

"X" Liquid is the result of **scientific chemical research**.

It **repairs and prevents** leaks—**eliminates and prevents** Rust and Scale.

In one case "X" Liquid repaired a four inch crack in the inner wall of a cylinder—and made a repair **that stood 2000 pounds pressure!** The owner saved over \$150.00—the cost of tearing down, welding, etc.

In fact, wherever welding isn't **practical or economical** "X" makes a permanent repair.

And as for **small holes** in the

radiator, pump, connections, etc., "X" will repair one leak or one thousand in 10 minutes. And do a job that couldn't be had for \$25 worth of soldering.

Experience proves that "X" is the only practical method of repairing leaks **without danger to the cooling system**. It doesn't weaken the radiator as the high heat of soldering is apt to do; nor does "X" choke the cooling system and make the cure worse than the **disease**—as is the case with radiator cements.

And if "X" is kept constantly in the water it **prevents all future leaks**.

Eliminates Rust and Scale!

The man who recognizes the dangers of Rust and Scale keeps "X" constantly in the water. This loosens all Rust and Scale and prevents any more from forming. Naturally, cooling is improved, oil and gasoline are saved and the engine performs **better**.

Every statement made about "X" Liquid is a **fact** and can be proved by any car-owner on the basis of our guarantee—that "**X**" **makes good or money back!**

Get the genuine "X" Liquid from any one of the 25,000 dealers who sell it. But be sure the big "**X**" is on the can.

Dealers!

Over 3,500,000 cans of "X" Liquid have been sold. It is the only product of its kind—and **wanted** by car-owners who **know** the facts.

The **EXTRA PROFIT** Assortment of "X" Liquid gives you \$1.50 extra in **FREE** profit. Ask your jobber—or write us direct.

**Large Size
\$1.50**

**Will do a \$25
repair job!**

**Ford Size
75c**

Lawson "Nu" Jamb Spring Hinges are Applied Easily

THE OLD WAY

THE LAWSON WAY

Because no hanging strip is required, Lawson "Nu" Jamb Spring Hinges are applied more easily and quickly. They give far more solid support to the door.

The absence of the hanging strip also saves at least \$1.50 on each application.

These hinges are made in both single and double acting types of the best material obtainable. They have 24 per cent more coils and the frictionless bearings give an easy swinging action not found in other hinges.

So many architects and contractors specify Lawson "Nu" Jamb Spring Hinges that dealers everywhere are finding them very profitable to carry in stock.

NOT "14 Points"

TWO POINTS, above all others, are of first importance to you in selecting the Hack Saw account you finally decide to handle:

- (1) How will these Blades appeal to my trade?
- (2) How much money will the account make for me?

These two points are so closely related that the answer to the first is also the answer to the second. Because the reputation of the products you handle is also your reputation. And if the Hack Saws you supply your trade are popular and known for the good service they give—there is no question that the account will be a Money Maker for you.

POINT ONE

(How do Napier "Quality" and "Expert" Blades appeal to Hack Saw users?) The best way to answer this is to show how widely Napier Blades are known, by giving a representative list of some of the largest and most prominent Hack Saw Buyers in the United States issuing Napier "Quality" and "Expert" Blades from their stock and supply rooms.

These concerns and thousands of others are a market for Napier Blades that already exists! They constitute a vast "public opinion" that proves a demand for "Quality" or "Expert" that it is desirable for you to meet. Because it is always the goods that are best known that are easiest to sell.

THE TEST OF SUPERIORITY

PIONEERS IN THE HARD-EDGE, FLEXIBLE-BACK BLADE

**NAPIER
QUALITY**
TUNGSTEN STEEL

—but TWO!

POINT TWO

(How much money will the Napier account make for you?) The answer: The value of an account to you depends entirely upon the merit of the product and its possibilities for distribution. The application of this point to the Napier proposition from the Consumer's angle has already been shown on the page opposite. There is a big demand for Napier Blades, and a demand of the very highest order. This demand means increased volume—quick turnovers—profits!

It would be interesting now to discover how that demand reflects on Napier Distributors. For this purpose we give below a few excerpts of letters received from Napier Jobbers.

NAPIER JOBBERS ARE PLEASED

"In reviewing our past pleasant business relations, I look back with a great deal of pleasure to our connection with the Napier Saw Works, as it is one of our real 50-50 accounts and one we value very highly."

(One of the big Hardware Jobbers in the Middle West—name on request)

"We have been selling their Hack Saw Blades for some time, and our success has been great when we have been obliged to make quality tests."

(From a large machinery house—name on request)

"We are having fine success in selling Napier Quality Hack Saw Blades at prices higher than other brands that we have in stock, thus showing more profit."

(From a Pacific Coast mill supply house—name on request)

NOTE

To put it in a nutshell—you have for your consideration a product of known merit—which is already widely used—supplied by a manufacturer who works with his jobbers and gains their appreciation of his efforts.

What does this mean to you? Everything. The goods you can best afford to handle are the goods that pay your "cost of doing business" and a profit. They are the goods that sell easiest, that appeal most, that handle best, that bring repeat orders, that earn you money.

Napier "Quality" and "Expert" Hack Saw Blades are all that. They earn you money in increased volume of business; in friendships and good will; in the satisfaction you derive from a clean, hard-working, remunerative account.

We wish to make a few additional choice jobber connections in sections of the country where we are not represented. The kind of connection we have in mind is what Napier Distributors refer to as a "real 50-50 account." There may be an opening in your territory. A letter or post card will bring you the details. Write the Home Office and Factory at Springfield, Mass. State whether you are interested in Hand Blades or Power Blades—or both.

The Development of SAFETY and HINGES

IN olden times high walls, huge city gates and massive metal hinges protected a community from its foe. Today city walls and gates are unnecessary but hinges have survived to furnish safety and add convenience. Now, as of yore, hinges make doors possible!

In ancient times and up until fifty years ago a hinge was a hinge—no more. Today conditions are different. With other developments hinges have assumed a new identity.

The name McKinney has marked a new epoch in hinge making. McKinney Hinges and Butts have set a new standard by which other similar products are judged for quality, endurance and usefulness. They make better doors possible!

To last indefinitely, to swing back and forth day after day without sagging or even a squeak—that is the creed of every McKinney Hinge.

No matter what the architectural design—whether it be massive portal or small casement window, there is a McKinney Hinge or Butt of proper beauty and design to fit. They fill every hinge need—perfectly.

In your plans for building or repairs remember the name McKinney. See that it is stamped on the Hinges or Butts you buy. By so doing you will be assured years of uninterrupted service and artistic architectural harmony.

Don't just ask for hinges. Remember the name McKinney!

Also manufacturers of McKinney garage and farm building door-hardware, furniture hardware and McKinney One-Man Trucks. Write McKinney One-Man Trucks for more information and a free catalog.

McKINNEY

Hinges and Butts

McKINNEY MANUFACTURING CO., Pittsburgh. Western Office, State-Lake Bldg., Chicago. Export Representation.

This is the fourth advertisement in the big McKinney Campaign. It appears in the April 3rd issue of *The Saturday Evening Post* and the April 10th issue of *The Literary Digest*. In these two far reaching publications it will carry the story of McKinney Hinges and Butts to more than 9,000,000 readers and prospective customers. At the same time other full page advertisements are appearing in *Architects' and Builders' Magazines*. All these advertisements are planned to impress the name "McKinney" upon the minds of hinge users. You can make them work for you. Talk McKinney!

The Standard Hinge

This far reaching McKinney Advertising Campaign is making a nation realize more and more the importance of Hinges. This realization has resulted in a greater demand for standard Hinges—those stamped with the name McKinney. You, as a dealer, should profit by this wide hinge publicity—Talk McKinney!

McKinney Products have been on the market for fifty years. They have set a standard. Now this McKinney Advertising is impressing the importance of this standard on your customers. Establish your store as McKinney Headquarters! Be sure your customers know you handle the McKinney line!

The Wrench

And the Job

This is **not** an extraordinary picture.

It is a scene that is duplicated every day in places where industry reigns.

It merely shows a COES KEY-MODEL WRENCH at work on the job, **but** it tells a most significant truth.

It tells the Hardware dealer that COES KEY-MODEL WRENCH is indeed a wrench that workmen **need, depend on and trust.**

It **warns** them that as industry expands, the market for the COES KEY-MODEL WRENCH expands, and is expanding every day.

Keep pace with the demand, and identify yourself as a progressive dealer selling reliable **WRENCHES OF QUALITY.**

Your jobber will supply you.

Get a Grip on Wrench Sales

Sell a good wrench—or better not make the sale. Good wrenches like Pexto, out-grip, out-last and in the end out-sell cheap ones. Stores with a real grip on wrench sales are found to recommend only the best.

Pexto Wrenches are good wrenches with a hundred years' experience built into them. They have the metal, the temper, the design and features to maintain their leadership for another century.

And Pexto Wrenches are known to the general public. National advertising in the Saturday Evening Post has planted the name Pexto indelibly in the minds of hundreds of thousands of people. They can be sold *more* than wrenches—they are ready for the complete line of Pexto Tools—and you can sell them.

Building All-Year Trade With Summer Sales

The Sargent Noiseless Screen Door Closer is a fast selling summer line. But on it may be built all-year-'round sales. It is suitable for any light door—lavatory, closet, storm or telephone booth door. Besides you have behind it the larger Sargent Door Closers for heavier doors.

Sargent Screen Door Closers are just right in size, strength and appearance. They close doors quickly but quietly, gently but firmly—no rebound. They

prevent the strain on hinges and locks exerted by slam-banging doors.

The public is being told of Sargent Screen Door Closers through our national advertising. They will look to their hardware dealers to supply them. Stock up. Every time a screen door slams this summer you will lose money.

Write for complete details. Window cards and other display material will be furnished on request.

RAZORS

Two Genco Favorites

GOLD SEAL

Ground full concave, blade finely polished, back and tang heavily GOLD PLATED. Transparent amber handle.

The beautiful combination of blade with gold plated back and tang and transparent amber handle, produces a handsome razor in the Gold Seal.

FLUID STEEL

Ground full concave, blade finely polished, back and tang finished dark GUN METAL by our anti-rust process. Handle imitation ivory. Contrast between an ivory white handle and dark gun metal back and tang, makes the Fluid Steel unusually attractive.

When your customer buys a razor that shaves him smoothly and comfortably again and again—one with an edge that can be tuned up for each shave by a few strokes on a good strop—he is thoroughly pleased with his purchase.

Genco Razors are guaranteed to please men in just that way. Your men customers are familiar with the guarantee:

“GENCO RAZORS MUST MAKE GOOD OR WE WILL”

They see it continually in Genco advertising appearing in the Saturday Evening Post and a list of other National Publications.

Add to this guarantee of quality the splendid appearance of the Genco Gold Seal and Genco Fluid Steel styles, and you will know just why so many of these two popular Genco Razors are being sold.

Most Jobbers Carry Genco Razors in stock. If yours do not, write us.

GENEVA CUTLERY CORPORATION

157 Gates Ave., Geneva, N. Y.

Lasts Three or Four Times as Long

"Customers of mine claim that Toncan Metal has proven to easily stand in use three or four times as long as the same gauge steel."

So writes a Tinner who has had wide experience with Toncan Metal.

So could thousands of other tinner and dealers write of Toncan Metal; for Toncan Metal sheets and products have proven their worth under every condition of service.

In Toncan Metal modern science has been combined with care and attention to detail, to produce even better sheet metal than the sheet iron of our grandfathers' day, that gave such splendid service.

It will pay you to investigate this better sheet metal—write nearest distributor at once for quotations and a copy of the book, "Corrosion—The Cause—The Effect—The Remedy."

Do You Keep a Hook For "New Business?"

FAMILIAR to most merchants is the "hook."

On it you hang the orders as they are filled. At the day's end they are added up—along with the cash receipts and other items.

In some stores they call that a day's work.

Not so in others. There is a type of merchant growing up who has a hook for "new business."

They hire an "outside" salesman or two to go after this business.

They look out for folks who might be buying but for some reason or other don't. These men aren't order takers—

they're "demand creators." They get the new business—and every new order increases your number of customers—enlarges your chances of profit.

Give your outside salesman a new business hook. Start him out with the **GTD** line. Instead of his taking in orders, let him be primed with selling arguments of the good quality and workmanship of the **GTD** line of screw threading tools and screw plates.

Let him talk **GTD**, shout **GTD**, whistle **GTD**, and pretty soon your customers will think **GTD** and want **GTD** tools and naturally turn to you as the "**GTD** Store."

The Greatest Galvanizing Discovery of the Age

Exclusively Developed by the
American Steel & Wire Company

A new and decided advance in the art of galvanizing wire, resulting in a heavier coat of more lasting zinc that stays on. Either Bessemer or open Hearth Steel. Big wires—more steel per rod—mean longer life and greater strength. Elastic hinged joints—mechanically joined, the only true and enduring way to unite a fabric without injuring the metal. We also put this wire into

Banner Poultry Fence brings big and quick profits to dealers, and great satisfaction to customers.

Banner Poultry Fence is a true woven wire fence and not a netting. Larger wires without increased cost. It is made of 15 and 17 gage wires, instead of 19 or 20 gage wires, as used in old-style fabrics, and has 22 wires in 4-foot height, 16 wires in 2-foot height, making a poultry fence of minimum close space and immense strength.

Banner Poultry Fence Wire is hard, stiff and springy. It carries a coat of zinc put on by the latest method—a discovery, a real improvement in galvanizing—a zinc covering more lasting; it stays on.

Banner Poultry Fence costs about the same as poultry netting in the principal selling sizes, despite the use of heavier wires. The close spaced wires are at the bottom where needed, with gradually increased space at the top, where close spacing is not necessary. Graduated spacing means a

saving which is put into larger wires without increased cost to dealer or consumer.

Banner Poultry Fence saves in cost of erection, because it requires fewer posts, while top and bottom rails are not needed to keep the fence in shape.

Banner Fence makes a neat construction, and forever does away with the ragged, saggy appearance of old-style fabrics.

 cast iron
 fittings

Tapping Caps by machine at our foundry. The machine is of our design and is motor driven. Flange fittings are also Tapped on this machine.

The Same Fittings That We Use Ourselves

WE are one of the largest users of pipe fittings, and we offer you the identical fittings we use in all our work—steam and hot water installations, power piping and automatic sprinkler systems. Try them on one job and you will never go back to other makes.

Grinnell Quality Pipe Fittings give **permanent** satisfaction because every piece is a master piece.

First: The Choice of Material.—We use nothing but the finest selected materials and our mixtures are carefully analyzed by our own chemists.

Second: In Machining.—All Grinnell fittings are threaded on our own machines by our own men who know that no small part of the profits of our own contracting business depends on their being threaded right. Try them once and you'll use them always.

Third: In Inspection.—No fitting is allowed to leave our plant that does not reach our rigid standards, standards built up by the rigorous requirements of sprinkler installation work which is on a higher plane than any other contract work.

These are some of the reasons why the use of Grinnell fittings on a job means not only labor saved, but freedom from leaks and absence of future troubles.

The "best there is" is none too good for your work. "Good enough" won't do. Grinnell fittings are the "best there is."

Help Your Customers Get a 100% Wool Crop

A Stewart Shearing Machine is a money maker for both you and the sheep owner. Machine shearing gets more wool, and the wool is longer and more marketable. Every machine sale nets YOU a nice profit.

There has been a great revival in sheep raising, and wool is worth real money these days. Machine sheared wool grades higher and brings top prices.

Hand blade shearing wastes money. A Stewart Shearing Machine gets 15 per cent more wool after the most expert hand shearer has done his best. This is real money, and the saving on even a small flock is considerable.

Stewart Shearing Machines not only get better and longer wool, but get it quicker and easier. The sheep are not scarred, and a smooth, even stubble is left for next year's growth.

The Stewart No. 9 Ball Bearing Shearing Machine is profitable for only a few head, and a big time saver and money maker for flocks up to 300.

Put Stewart Shearing Machines in Your Window

The Stewart Gets ALL the Wool, in Marketable Condition.

STEWART No. 9 BALL BEARING SHEARING MACHINE

Standard hand-operated machine—well built—runs easily.

For shearing sheep or goats.

Retail Price

The toolmaker says:

"Yes, I've got quite a number. No more, probably, than most toolmakers, but quite a number just the same. But then, I ought to have a lot of 'em. I've been buying Starrett Tools ever since I was an apprentice.

"You know my work calls for pretty close limits, and some way or other I've got a feeling of confidence in Starrett Tools that makes it easier for me to do good work.

"When did I get my first Starrett Tool? Oh, somewhere back in the 80's. In fact, it must have been pretty soon after the Starrett factory started. There's one thing that always impressed me. Right from the start, Starrett Tools have been designed and made by men who knew machine shop practice. You know, practical men. And somehow it shows in the quality of the tools."

A Strong Wire Staple -- and a Felt Washer

**--Little Things, Yet As Here
Applied They Lengthen Life
And Increase Usefulness
Of Collar Pads**

Pat. in U.S. Dec. 1, 1914
Pat. in Canada Apr. 6, 1915

New Patented Hook Attachment

A strong wire staple reinforced by felt washer firmly grips hook to body of pad even though cover has been weakened by sweat and long usage. This lengthens life of pad. It is the greatest improvement since we invented the hook. *Used on all our Hook Pads and only on pads made by us.*

Stuffed Collar Pads

are the best safeguard against shoulders of horse being chafed, galled and bruised by collar. They excel the unstuffed kinds which lack the soft, pliable, cushion-like and absorbent features possessed by pads containing our specially prepared composite stuffing.

Low in Price---Long Lasting---Well Advertised

Our sixth campaign of advertising direct to users, through the medium of leading agricultural publications, is on a more extensive scale this year than any previous one. This serves to further the interest of dealers and jobbers.

Dealers are requested to write us for a supply of new books concerning care of horses and containing many valuable emergency horse remedies. Every horse owner will want a copy. Sent Free upon request.

THE BIG SUCCESS

MUELLER

The "Big 3"

PIPELESS FURNACE

THE all round construction superiority of the Mueller, backed by trade-creating advertising and powerful selling co-operation, gives every Mueller merchant a tremendous advantage.

When you talk Mueller construction features—The "Big 3"—you have selling arguments which never fail to convince. You can safely recommend the Mueller—put your reputation behind it—because it will hold and build trade for you.

The "Big 3"

The exclusive construction features that have established Mueller superiority:

1. Large and Properly Proportioned Register Face.
2. Spacious, Unobstructed Air Passages.
3. Vast and Scientifically Designed Heating Surface.

Write for the Mueller Book and get full details of the "Big 3" features and other superior points of Mueller construction. Learn also about the Mueller sales plan that helps you get the cream of the business.

The Mueller has stood the test of real service and its record is overwhelming evidence of its heating efficiency and fuel economy. That is why every merchant who handles it is profiting by the big and constantly increasing demand for the right kind of a pipeless furnace. The Mueller squarely meets every requirement of pipeless heating.

Don't ignore the opportunity for Mueller sales in your community. Get in touch with us at once and learn full details of our liberal and attractive agency proposition.

D.; Wenatchee, Spokane, Seattle, Wash.

A Few Baldwin Features

Provision Shelves.—All Baldwin Refrigerators are fitted with heavy tinned woven wire shelves. These are the best shelves made, permitting of free circulation of air and being strong and easily cleaned. They are double or retinned after making and do not rust.

Elastic Packing Around Edges of Doors and Lids.—In addition to the usual laps on doors the latter are provided with elastic packing around the edges, this in combination with our lever lock making them doubly air tight. The lids of our upright styles are also fitted with this exclusive ice saving feature not found in other makes.

Casters. — We use a first-class caster, with maple or lignum vitae wheels, varying in size according to weight of refrigerator. Its chief merit lies in the fact that it can be inserted and withdrawn from the socket, but will not drop out, the shaft being gripped at top by the steel socket.

Air Tight Waste Trap.—Our new inside trap is of brass, nickel-plated, and comes apart for cleaning. Being in the bottom of storage compartment, it is more easily reached than when underneath the refrigerator. Waste pipes are also removable for cleaning.

Silverware Draws Women to Your Store

High-grade Flatware, carefully kept and suitably and attractively displayed, will do more perhaps than any other agency to take your store out of the for-men-buyers-only class.

Do you realize just how desirable feminine patronage is? Have you done what you can to get it?

Don't tuck away a few sets of Knives and Forks in a dark corner and expect a searching party to dig them up. Give the ware a prominent place, keep it in condition, handle it as silverware, not as nails, make special displays of it. It will impress the woman shopper to know you handle the Flatware that matches the Hollowware she has seen illustrated in our advertising.

Write our Advertising Department for
advertising and display helps.

"Move the FAULTLESS Way"

Mirro Reduces Kitchen Expense

IT is in the test of time that Mirro Aluminum most strongly proves its worth. Built for beauty, convenience and durability, it serves with unimpaired efficiency for many, many years.

This long service makes Mirro an unusually economical purchase. When you buy this Mirro Aluminum Preserving Kettle, for instance, you buy a kettle which lasts a lifetime. It will not need replacing.

And it makes for further saving by its thrifty use of fuel. "Diminish the gas by almost half" is the Mirro rule in these preserving days.

Like all Mirro utensils, it has conveniences which you do not find in ordinary aluminum ware.

(1) Well-formed, easy-pouring lip. (2)

Aluminum Goods Manufacturing Company, General Offices: Manitowoc, Wis., U.S.A.
Makers of Everything in Aluminum

Solid, tightly rolled, sanitary bead, free from dirt-catching crevice. (3) Smooth, rounded corners—easily cleaned.

(4) Handle ears permit handle to be moved to any one of three different positions without coming in contact with sides of the utensil. (5) Tilting handle with eye for hanging.

(6) Famous Mirro finish. ☆(7) Famous Mirro trade-mark which is stamped into the bottom of every piece, and your guarantee of excellence throughout.

It is the symbol also of more than a quarter of a century's experience in better aluminum making, and a sign of America's foremost manufacturer of aluminum ware.

Ask for Mirro Aluminum at the leading stores. That is where you will find it.

MIRRO ALUMINUM

Reflects
Good Housekeeping

The Ladies' Home Journal, Good Housekeeping and McCall's Magazine (June issues) will carry the above advertisement full page size. Every month in the year Mirro Aluminum is advertised in this conspicuous fashion in the great magazines that are read by women. The purchases of millions of these women are influenced by Mirro advertising. The extent to which they are influenced is proved by the fact that Mirro is one of the fastest selling kitchen wares of today.

Crown Oil Cooking Stoves

With Patented Kerogas Burners

No. 38G, with High Shelf

No. 17

Highest advanced oil cooking stove. Gives more real service and does better and quicker cooking at a smaller expense than any other stove.

Easy of operation, quick and easy to control the flame and heat, free from smoke and odor when used as directed; is practical, serviceable and economical. Frame cabinet style with low shelf to accommodate pots and pans; also acts as a brace, making the stove rigid. Each burner has a cooking surface of 100 square inches; has a dial and indicator on the wick raiser; a raising device lifts the drum up free of the burners, which facilitates easy lighting and allows an immediate extinguishing of the flame after the wick has been turned down. A large, one-gallon oil tank with an always visible oil supply, making refilling the tank easy without spilling the oil. A lift off shelf protects the glass oil tank from splatterings of hot grease and forms a convenient extension to cooking top. Gray enamel finish. Seamless brass burners.

For full line of these stoves with prices, please refer to page 646 of our General Catalog No. 66.

Send for large illustrated folders.

Lantern Slides

For use in Motion Picture Theatres, we are prepared to furnish free of charge, Lantern Slides in colors, showing the dealer's name, to those who carry the goods in stock.

With orders for these Slides, please send a letter or billhead, or have it printed or typewritten, so there will be no possibility of an error in the name.

WAGNER Door Hangers and Tracks

Quality hangers and tracks designed to overcome all the troubles and draw-backs of cheaply built hangers and tracks that are made merely to sell at a price. Wagner Hangers have roller-bearing wheels, tandem trolley with bumper on end to protect wheels, a very simple and practical cam vertical adjustment and other features that put them out of the ordinary class. Tracks are self-cleaning, bird-proof and much heavier than ordinary tracks. They please customers and build trade.

Write for catalog showing entire line.

FACTS Worth Remembering

In ordering Window or Fly Screen Cloth from your Jobber don't forget these vital facts:

The amount of **service** and **satisfaction** your customers get out of Screen Cloth depends almost entirely upon the materials used and the methods employed in the making. The label which identifies every roll of the "Perfect" Screen Cloth is your guarantee of the best materials, accurate mesh, the proper width and a full 100 lineal feet to every roll.

That's why dealers buy all of our wire products, Screen Cloth, Hardware Cloth, Poultry Netting, Fly Traps, etc.

Handle Detached. Cut shows Right Hand Casement Adjuster

Superior Casement Adjuster

For windows that open out
Operates without disturbing the screen

Superior Casement Adjuster is the most
convenient to operate because all that is re-
quired to unlock and move the window is to
simply move the handle; when you let go the
handle the window is locked automatically.

Superior Casement Adjuster is the strong-
est because it locks on the rod fastened to
the window and thus combines the strength
of the two rods.

Superior Casement Adjuster holds the win-
dow firmly at any angle and does not allow
the window to rattle.

"Forstner" Brace and Machine Bits

For Fine Carpenter, Cabinet and Pattern Work

SPECIALLY ADAPTED FOR HARDWOOD WORKING

The Foster Labor Saving Auger Bit, unlike other bits, is guided by its Circular Rim instead of its center; consequently it will bore any arc of a circle and can be guided in any direction regardless of grain or knots, leaving a true polished surface. It is preferable and more expeditious than chisel, gouge, scroll-saw, or lathe tool combined, for core-boxes, fine and delicate patterns, veneers, screen work, scalloping, fancy scroll twist columns, newels, ribbon moulding and mortising, etc.

Manufactured by THE PROGRESSIVE MFG. CO., Dept. "A," Torrington, Conn.

LOS ANGELES

The dependability of Myers Hay Unloading Tools is so well known in all hay making circles that Myers Unloading Service has become the standard of comparison for all others.

This in itself is the best recommendation we can mention, and should lead dealers, carpenters and builders to investigate the Myers Line of Unloaders, Forks, Slings, Tracks, Pulleys and Fixtures before stocking for their 1920 trade.

Take advantage of Myers Ease of Operation, Large Capacity, Speed and uniform service, and let them produce business for you. Ask your Jobber or write us. Catalog and prices on request.

Goods Made by  are Made to Please

Kees Calf Weaner

A PROFITABLE
SALES BUILDER

Simple and secure—no split keys, bolts or buckles. One arm riveted solid to plate; other movable to permit attaching, but held in place securely by small flat spring.

Quickly Snaps On and Stays There

Can't catch on things and tear calf's nostrils. Light weight prevents interference in regular feeding. No sharp prongs to tear mother cow's udder or injure other stock. The most humane weaner ever invented. Every one sold means profits for the dealer because when shown they sell themselves. Ask your jobber or write Dept. 50 for details and prices.

IMMEDIATE SHIPMENT

F.D. Kees Mfg. Co. Beatrice, Nebr.

GET A SUPPLY OF NOVELTY FORCE PUMPS

And treat your customers to the best

No. 130

We are the manufacturers of the original 'Novelty' Pump for WELLS and CISTERNS. Its patented handle attachment renders it the most durable, easiest working and best fitted pump.

Its imitations are far inferior, because they are not as accurately constructed and do not produce as large a volume of water with each stroke.

Don't delay—write for circular and special prices at once!

THE HESS-SNYDER CO., Massillon, Ohio

Add to Sales and Profits

DEALERS sell *more* Sturges Milk Cans and make *bigger profits* because Sturges cans have so many superior values which dairymen want.

Guaranteed Capacity—hold just so much and no more. Made of highest quality steel. Designed to give longest lived and most economical service. Inside heavily tinned and all seams soldered smooth makes them easy to clean and keep sanitary to the highest degree.

Sturges cans will bring to you the trade seeking reliable dairy equipment and help increase your sales and profits. Write for complete information and Catalog No. 29X

Prompt — Courteous Service

A Good Rope— Seaport Manila

MOST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

SEAPORT MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

Peters Cartridges

THE announcement by the United States Revolver Association of the winners of the Outdoor Pistol and Revolver Championships, again points to the leadership of Peters' Cartridges.

The World's Record, by Dr. Snook, a record by a wide margin, and the excellent scores made by T. K. Lee are added to the evidence of former years and demonstrate the genuine quality of Peters Semi-Smokeless Cartridges, which have for years been used by many winners of the U. S. R. A. and N. R. A. matches.

Users of the **P** Brand Won Three Out of Four of the 1919 Outdoor Championships of the United States Revolver Association.

Match "A" (Revolver Championship of America), T. K. Lee, Birmingham, Ala., 463x500.

Match "B" (Pistol Championship of America), T. K. Lee, Birmingham, Ala., 472x500.

Match "C" (Individual Military Championship of America), Dr. J. H. Snook, Columbus, Ohio, 651x750. World's Record.

SAVAGE

The .250-3000 Savage Bolt-Action Model, 1920

Are You Ready for the Hunting Season

Here's the answer—the last word in rifle completeness—a bolt action .250-3000 SAVAGE.

You already know—have handled—the .250-3000 lever action Savage. You know what it can do. Now you have both kinds. You can satisfy everybody, because this new model has all the qualities of the old—just as reliable—just as convenient—but with bolt action like the military rifle.

You've always wanted—needed—a bolt action repeater. We're going to show it to the sportsmen for you by concentrating two entire months of our advertising campaign of this new step in rifle development. For two solid months, more than thirteen million potential buyers will see our announcement referring them to you.

And you will be able to see it on the spot—right across your counter—if you have stocked the NEW SAVAGE BOLT ACTION SPORTING RIFLE, CALIBER .250-3000.

SPECIFICATIONS

22 inch tapered high pressure steel barrel with integral front sight base, checked pistol grip stock and fore-stock, pistol grip capped, oil finished one-piece stock, corrugated trigger, corrugated steel shot gun butt-plate, white metal front and flat top sporting rear sights, magazine capacity five cartridges, weight 6 pounds.

Don't fail to carry a stock of all the SAVAGE Models in rifles and pistols. The complete line—and each one is particularly built for a particular job. That's what the Savage Trade Mark stands for, "The Finest Tool for the Finest Work."

SAFETY INTERLOCKING STOVE AND FURNACE PIPES

Fire
Preventing

Home
Protecting

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the preceding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe. Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.

Send for Price List and Descriptive Statement.

PEERLESS DOME DAMPER

You can sell a Peerless Dome Damper for every Fireplace now under construction in your city by explaining its advantages to the owner or contractor.

It saves fuel. Regulates draft. Increases heating capacity. Keeps temperature uniform. Prevents back drafts and dirt from blowing into the room. Reflects the warmth and glow from an open fire into the room instead of sucking it up the chimney.

Start today—tell your contractor friends and prospective home builders about Peerless Dome Dampers, Ash Traps, Ash Doors and Peerless Fireplace Furniture. The profits from Peerless sales pay you well. Write today for Catalog "F."

PEERLESS MANUFACTURING CO.
INCORPORATED
 Makers of Fireplace Furniture
 LOUISVILLE, KY.

There is a Peerless Dome Damper for every fireplace. Unique features of operation. Cannot get out of order. Blueprints furnished.

Assured Profits by Selling the SIMPLEX IRONER

"THE BEST IRONER"

Comfort and ease at what is otherwise very tiring work is a unique feature enjoyed by women who use the Simplex Ironer. This is possible because of the extreme simplicity of the Simplex, with its wonderful automatic feed control.

Women to whom you sell a Simplex can sit down and iron. That is a big selling point which is attracting many profitable sales to Simplex dealers everywhere.

The household appliance department selling the Simplex can do so with the satisfaction of offering customers the leader in the field.

We co-operate in training your sales force in specialty selling. The SIMPLEX Sales Plan for dealers is far-reaching. It provides new practical suggestions for the building up of your entire Household Labor-Saving Appliance Department.

ALUMINUM
"Real Solid"

ANNOUNCEMENT

The "REAL SOLID" LINE has been for 20 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

A New Line of
"REAL SOLID WARE"

This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidity and Durability.

We have eliminated unnecessary expense of OAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

TRIMMINGS — Tinned Iron, using Double Coated Tinned Iron — The best on the market.

PROTECTED HANDLES — All Coffee and Tea Pots with handles, both curved and straight — bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

OUTSIDE FINISH — The Same HIGH CLASS polish as heretofore.

INSIDE FINISH — Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.

We have added 25 New Items, all practical. This makes the "REAL SOLID" Line the most complete on the market

Write Today and get our New Catalog just off the Press.

The Buckeye Aluminum Company
WOOSTER, OHIO

They Name It Because They Know the Difference

Women know that the name "Enterprise" means the steel-knife-and-plate principle, the only way of chopping food into neat particles having all the nourishing juices. They'll ask for

"ENTERPRISE"

Meat-and-Food Choppers

because they have no patience with cheaper "grinders" that crush and mangle the food, robbing it of essential nourishment and making it unfit for dainty dishes.

This preference for the standard chopper means business for you. Get in touch with your jobber.

"ENTERPRISE"
Meat-and-Food Chopper
Family Size\$4.00

"ENTERPRISE" Sausage Stuffer

Rural folks are awake to its value at "butchering time." Makes the best lard and sausages. The housewife finds it a wonderful help in making jellies, fruit juices, etc. Stock to meet the sure demand.

The common-sense way of handling credit accounts

MERCHANTS in 182 different lines of business are using the N. C. R. Credit File.

These merchants have found that the file gives them the common-sense way of handling credit accounts.

It is a one-writing system. It eliminates book posting of accounts.

It keeps each day's credit business separate.

It prevents forgetting to charge goods sold on account.

It prevents neglecting to credit money paid on account.

It gives each charge customer a statement of account on every purchase.

It protects every credit record until it is paid in full.

It saves time, work, and worry. It stops leaks and saves profits.

Investigate this common-sense way of handling credit accounts

~~~~~FILL OUT THIS COUPON AND MAIL TODAY~~~~~

Dept. 25, The National Cash Register Company, Dayton, Ohio:

Please give me full particulars about the N. C. R. Credit File way of handling credit accounts.

# Are You Getting Your Share?

Hardware World Dealers all over the country are "cashing in" on the new "Harvard" Ball Bearing Truck Caster. Are you one of them or have you overlooked this opportunity to increase your sales?

The new "Harvard" Ball Bearing Truck Caster is constructed of extra heavy gauge steel. The axle is also made of extra heavy steel. The wheel is cast iron. This caster is much lighter than ordinary iron casters yet is practically indestructible. It is unequalled for strength and dur-

ability. The large 5-16 inch ball bearings make them easy running and turning.

Our new "Harvard" Ball Bearing Thread Guard Caster shown below has proved a big seller to shoe factories and mills where lint and threads from the floor are apt to twist around the wheels and prevent free action. Their big feature is the steel guard which prevents this and their 7-32 inch ball bearings.

Every Hardware World dealer should have our descriptive circular No. 105 H. W., showing our complete line. Write for one.

# FELTOLD

REGISTERED JULY 13th, 1919

The demand for the well-known *SCHENCK LINE* of CASTERS is *already created*. It is now only necessary to show them to sell them.

Because modern homes have polished or varnished hardwood floors, these Casters are made especially for hardwood floors. They roll silently—never leave the slightest mark nor injure the finest rugs or floor coverings.

"Feltoids" are the only Caster Wheels that are made with a hard body, yet with a soft silken tread.

The popular *Schenck Line* of "Feltoid" Casters is now made in all standard styles. They are so strong, so well constructed, so easy to put on and so easy "on everything" that customers prefer them to all other casters.

They not only sell readily and steadily, but they please everybody, help business and pay dealers a worth-while profit.

We have Specialized in Casters for 30 years.

Ask your Jobber to supply you. Write to us direct for Descriptive Circulars and Prices.

## *A Great Line to Handle*

It is in the test of hard daily use that aluminum ware has proved its merit for cooking purposes. For not only does aluminum endure heat, but it is a tough and durable metal which can take a lot of punishment otherwise.

In modern kitchens aluminum utensils are coming more and more into use. They do not chip nor crack, and because of their long life are an economical purchase.

VIKO, The Popular Aluminum, is a great line to handle. It includes every kitchen need, and has a big trade-appeal in its popular price. Viko utensils are staunchly constructed, too, and embody the latest improvements in design. For full information about Viko—

Wherever there are Pans and Kettles there is a ready sale for

**MENDETS**  
PATENT PATCH

*half million a week sold*

**M**ENDETS — patented patches that mend all leaks instantly in graniteware, aluminum, copper, tin and iron cooking utensils, washboilers, etc. Fit any angle. Stand severe heat. They require no heat, solder, cement, or rivet. They go on in a second and stay put.

The largest chain of stores in the country sells over twenty thousand packages of Mendets a week.

Many jobbers buy Mendets every few weeks in 25-gross lots.

Selling Mendets is big business for retailers and jobbers. It is also a satisfactory business.

Mendets appeal instantly to home-loving people. They are especially appropriate now, because of the widespread preaching and practice of economy.

This little retailing giant, MENDETS, is advertised in a big, broad newspaper campaign.

The Counter Carton is a Silent Salesman.

*Ask your Jobber. He sells Mendets, the genuine patch, or write us for the name of a nearby distributor.*

**COLLETTE MANUFACTURING CO.**  
Amsterdam, New York

## What's In a Name

Enough—plenty — **SUCCESS** in the **RIGHT ONE** properly applied. It's half the game, naturally, you don't get a good one with poor merchandise, unprincipled methods nor disregard for rendering distinctive and valuable service. Establish a meritorious name, it compares with a solidly laid rail system that has demonstrated "delivered" ability, preciseness and certainty, when the charges are fair the public uses the road over and over again, even if the cars are changed in color, the conductor's uniform from blue to gray or electricity replacing steam.

"Good Morning" (It's me they're talking about)

Evidence galore Brunswick Balke (Pool Table Mfgs.) undeniable success producing talking machines and automobile tires. Do you think the name helped any!

Heinz put over 57 and more varieties. We contend first one was hardest, name helped others along materially.

Chandler Motor Car Company identified with Cleveland Motor Car Company. Chandler a success, Cleveland unknown, BUT, public had sufficient confidence in connection that 25,000 Cleveland cars sold before one was shown.

Think of it, Standard Oil put over mild laxative (Nujol), really there is a contrast between Keroco Stove (Perfection) and body lubricant.

"WHERE DO I COME IN?" asks the above member of the Gem Brush family. **HERE AND NOW.**

"On and above the fact that **GEM BRUSHES** possess one hundred cents of utility for every dollar expended, pay legitimate wholesome profits to everyone handling them and guaranteed throughout, comes the burning truth that the name **GEM** connected with shaving things particularly, spells **SUCCESS** from every stand-point necessary and essential. **GEM BRUSHES** represent new car developed with all knowledge possessed up to 1920 and now placed on that solid Gem System, which is **BUTTING POWER**, they will ride forth with confidence of our trade to reach all points which is **ULTIMATE CONSUMER** via stations called **DEALERS**, through the transfer points called **JOBBERS**. Ring the bell and go ahead, you have the goods.

We all went to the top with Gem Razors and Blades because they are choked full of quality, usefulness and results, they survived and succeeded because **GEM** exceeded everything in its class, stepped into another one of its own, very true, that is going to continue, also prevail in **GEM BRUSHES**.

Their name is 50 per cent at least of their selling power. If we put lake water in bottle labeled Gem Hair Remover, large quantities would be sold, but, eventually get knocked off the market; nevertheless, we'd sell a lot of it. **GEM BRUSHES** not only will sell on account of name, but, be backed up in us with real quality and service.

**GEM BRUSHES** will be advertised in magazines and through other channels all year around.

Don't lose sight of the fact that **GEM BRUSHES** are in a class alone, **GEM BRUSHES** are manufactured to sell as cheaper than good brushes can be produced.

**GEM BRUSHES** is all knowledge of Brush Manufacturing experts thrown together, divided with essential factors and the results **GEM BRUSHES**.

(Signed) **THE GEM SAFETY RAZOR CORPORATION.**

## RE-SALE PRICE FIXING

Clark McKercher, counsel for the American Hardware Manufacturers Association, shows that refusal to sell is legal, but agreement to maintain is unlawful.

The U. S. Supreme Court has just handed down a decision holding that formal contracts by which the manufacturer agrees with his purchaser that the latter shall maintain a fixed resale price dictated by the manufacturer, are violations of law. On the same day, the Circuit Court of Appeals in New York rendered a decision to the effect that where a manufacturer refused to sell to a dealer for the reason that the latter did not maintain a proper re-sale price, there occurred no violation of Section 5, known as the "Unfair Practice Section" of the Federal Trade Commission Act. The net result, then, of this litigation, about which so much has been written, is the following:

1. It has been held by the U. S. Supreme Court in the Colgate case that the refusal by the manufacturer to sell to a price cutter or to any person not maintaining a proper re-sale price does not accomplish any violation of the Sherman Act.

2. It has been held by the Circuit Court of Appeals in the Goodyear case, that a refusal to sell for a similar reason is not in violation of the Clayton Act.

3. It has been held by the Circuit Court of Appeals that it is not unfair practice under the Federal Trade Commission Act to refuse to sell under these conditions.

4. Notwithstanding the fact that no violation of law under any of these acts is found in the operation whereby a manufacturer refuses to sell his product, the United States Supreme Court holds that where both parties enter into a formal agreement to maintain the price, a violation of the law occurs.

New patrons are like new babies—it costs a lot to get them and we should spare no pains to nurse them well, so that they may grow to be strong men and women in the household of your store.

## NOT HIS JOB

"I'm not supposed to do that," said he,  
When an extra task he chanced to see,  
"That's not my job, and it's not my care,  
So I'll pass it by and leave it there."  
And the boss that gave him his weekly pay  
Lost more than his wages on him that day.

"I'm not supposed to do that," he said;  
"That duty belongs to Jim or Fred."  
So a little task that was in his way  
That he could have handled without delay,  
Was left unfinished; the way was paved  
For a heavy loss that he could have saved.

And time went on and he kept his place,  
But he never altered his easy pace,  
And folks remarked on how well he knew  
The line of tasks he was hired to do.  
For never once was he known to turn  
His hand to things not of his concern.

But there in his foolish rut he stayed,  
And for all he did he was fairly paid,  
But he never was worth a dollar more  
Then he got for his toil when the week was o'er;  
For he knew too well when his work was  
through,  
And he'd done all he was hired to do.

If you want to grow in this world, young man,  
You must do every day all the work you can.  
If you find a task, though it's not your bit,  
And it should be done, take care of it;  
And you'll never conquer or rise if you  
Do only the things you're supposed to do.

You would find more folks starting the morning fires with late editions of big, bulky mail order catalogs if the business men of the nation adopted a more liberal policy embracing the use of their newspapers for advertising purposes. The mail order cockleburrs of the business world are choking the life out of many business districts simply because they are not eradicated, root and branch, by the judicious use of printer's ink.

## ROTARY CODE OF ETHICS FOR ALL MEN OF BUSINESS

My business standards shall have in them a note of sympathy for our common humanity. My business dealings, ambitions and relations shall always cause me to take into consideration my highest duties as a member of society. In every position in business life, in every responsibility that comes before me, my chief thought shall be to fill that responsibility and discharge that duty so when I have ended each of them I shall have lifted the level of human ideals and achievements a little higher than I found it. In view of this fundamental in a code of trade ethics for International Rotary are the following principles:

1. To consider my vocation worthy, and as affording me distinct opportunity to serve society.

2. To improve myself, increase my efficiency and enlarge my service, and by so doing attest my faith in the fundamental principle of Rotary that he profits most who serves best.

3. To realize that I am a business man and ambitious to succeed; but that I am first an ethical man, and wish no success that is not founded on the highest justice and morality.

4. To hold that the exchange of my goods, my service and my ideas for profit is legitimate and ethical, provided that all parties in the exchange are benefited thereby.

5. To use my best endeavors to elevate the standards of the vocation in which I am engaged, and so to conduct my affairs that others in my vocation may find it wise, profitable and conducive to happiness to emulate my example.

6. To conduct my business in such a manner that I may give a perfect service equal to or even better than my competitor, and when in doubt, to give added service beyond the strict measure of debt or obligation.

7. To understand that one of the greatest assets of a professional or of a business man is his friends, and that any advantage gained by reason of friendship is eminently ethical and proper.

8. To hold that true friends demand nothing of one another, and that any abuse of the confidences of friendship for profit is foreign to the spirit of Rotary, and in violation of its Code of Ethics.

9. To consider no personal success legitimate or ethical which is secured by taking unfair advantage of certain opportunities in the social order that are absolutely denied others, nor will I take advantage of opportunities to achieve material success that others will not take because of the questionable morality involved.

10. To be not more obligated to a brother Rotarian than I am to every other man in human society; because the genius of Rotary is not in its compensation but in its co-operation;

for provincialism can never have a place in an institution like Rotary, and Rotarians assert that human rights are not confined to Rotary Clubs, but are as deep and as broad as the race itself; and for these high purposes does Rotary exist to educate all men and all institutions.

11. Finally, believing in the universality of the Golden Rule—All things whatsoever ye would that men should do unto you, do ye even so unto them—we contend that society best holds together when equal opportunity is accorded all men in the natural resources of this planet.

## WHAT DOES YOUR CUSTOMER SAY WHEN YOU ARE NOT PRESENT?

All is not steel that shines, neither is it all velvet when you handle shoddy goods. Business is not always what it seems; the hardware man with the largest diamonds does not always have the best reputation.

Get a reputation for handling the best makes of goods—no guessing, hemming or hawing when a patron says: "How about the quality?" If you are not posted, get posted before the moon—or your patron—changes.

True, the old proverb says, "When ignorance is bliss, 'tis folly to be wise," but when some good old patron goes home to nurse a flabby purse and an unsatisfactory tool, and quotes old proverbs to himself, such as, "A fool and his money are soon parted," he is simply harnessing up all those vagrant thoughts for a trip to the store of your competitor.

By the way, it makes a mighty big difference, the things that a patron says to himself when he comes to put his purchases to the test—he is putting you to the test just then; your buying sense, common sense, patron sense. Listen: "Mighty good tool that! Pays to stick to Smith! Knows a good tool! Has buying sense! You get your money's worth!" But when a patron says, indignantly: "Well, I'll through with Smith! Always get stung there!" it is time for Smith to take an inventory of himself and see what is lacking.

The man who invents an instrument which will record all the afterward words of hardware patrons will soon be richer than a Croesus. What the patrons say, and why they say it. Barnum said that the American public liked to be humbugged—possibly they did in his day but that generation is now under the sod and a new generation has arisen that knows not Barnum; a generation which says, "Brace up, and give us a square deal. Do business on the square! Not a bit of humbuggery for us!"

In these days of high prices folk of horse sense call out for the best, and say, "Nay, nay!" to the lure of inferior goods. In other words, we might say that patrons with horse sense purchase articles that are both staple and stable.

**"YES-ING" THE BOSS!****A Too-Common Practice That Doesn't Pay**

"Yes-ing" the boss is a great indoor sport—agreeing with him in everything that he proposes or suggests, says Clifford A. Sloan in *Forbes*.

"Two weeks ago, on a train from Chicago, I met a man of big business, a vice president of a big corporation, and he told me that his hardest job was to get men who were big enough, who had back-bone enough, to disagree with the boss, men who had opinions of their own and ideas of their own, and who were not afraid to express these opinions and ideas.

There are two classes of men who yes the boss.

The first is the peanut-brained individual who never did and never will have an original idea. All he can say is: "Yes." He is the original specimen of Mary's little lamb. He is a good follower. He gets in at eight-thirty and takes his hour for lunch, even though he has to stand outside the office door for fifteen minutes. He quits on the stroke of five as religiously as the cock crows at dawn. He is necessary to every organization because there is always routine work to do and he can do it.

The second is the chap who has ideas of his own and plans of his own but who is so spineless that he does not dare to suggest them. The boss makes a suggestion for handling a certain piece of work, and this chap knows that his own plan is better, for that work lies in his department, and he is more familiar with the details of that department than is the boss. But water runs through his veins, and he mumbles a "yes." He is on the third rung of the ladder above the fellow described in the preceding paragraph; but he stays there.

He dare not proceed farther for fear it wouldn't win the approval of the boss.

Then there are two classes of men who don't yes the boss.

The first is the pin-headed fellow who is so petty and so small that he can't see value in any suggestion unless it be his own. He argues and argues over every miserable little detail and when the question is decided against him he continues to bring up some petty objection. The boss keeps this chap around because pin-head has ideas and is not afraid to suggest them, and the boss hopes that some day the narrow mind will become broader.

The second who does not yes the boss is the chap who has ideas, who is not afraid to suggest them, but who is big enough to admit that the other fellow's plan is better and then to get behind the big idea. He brings up every point that favors his plan, but also weighs carefully every detail of other suggestions. He judges by the standard of what is best for the business, what is best for all concerned, regardless of whose plan or whose suggestion may be under consideration.

If you've an idea to offer, a plan to suggest whereby this or that work can be done more effectively, offer it! The boss cannot know the detail work of every department and of every desk. He wants you to study your work, to improve it, no matter how unimportant your job may seem to you. He wants ideas from you. But if a better plan than yours is suggested, be broad-minded, admit it and get behind the big idea.

Failure to make suggestions is not helping the boss. Agreeing with him in everything he suggests is not helping him.

Nor is it grooming yourself for a bigger job and bigger responsibilities.

**THE BOOKS YOU USED TO READ**

Did you ever look over the bookcase and pick out again the books that once you read? Perhaps you had to read them once. Some day a long time ago, they may have been a part of your English literature course in high school, or was it in college? At any rate, time, say twenty years, has made them take on new luster. I have just found, in reading again Oliver Wendell Holmes "The Autocrat of the Breakfast Table," more pleasure than I ever discovered in it when the instructor used to say, "For tomorrow the next seventy-five pages."

One thing was the poem "The Chambered Nautilus." Who could pass by a gem so rare?

And in another place the dear Doctor says something which makes us feel that all new things are only those which have been forgotten and seem new when repeated. Here are his own words:

"You don't suppose that my remarks are like so many postage stamps, do you—each to be only once uttered? If you do, you are mistaken. He must be a poor creature that does not often repeat himself. Imagine the author of the excellent piece of advice, 'Know thyself,' never alluding to that sentiment again during the course of a protracted existence!

**Truths Are Tools to Use Freely**

"Why, the truths a man carries about with him are his tools; and do you think a carpenter is bound to use the same plane but once to smooth a knotty board with, or to hang up his hammer after it has driven its first nail?

"I shall never repeat a conversation, but an idea, often. I shall use the same types when I like, but not commonly the same stereotypes. A thought is often original, though you have uttered it a hundred times. It has come to you over a new route, by a new and express train of associations."

The man who is always on the square; who never chisels a patron, nor bolts a hard job, has some of the earmarks of a traveler on the Road to Salesmanship Success.

## YOU HAVE A DUTY TO PERFORM

"Reduced to its simplest form, Bolshevism is merely a lazy man's envy of the prosperity of a hustler."

Our Republic is going through an era which is bound to prove a crisis in national and world history. We have faith that the strong, sane, sound element which brought forth the principles of democracy, still exists and in the end will triumph over those restless spirits who advocate disorder and the disintegration of the moral forces of the country.

It would indeed be a sad day if Bolshevism got the upper hand. All we have to do is to look at Russia, its starving millions, its disorganized business, and the wreck and ruin of its industries.

Americans are typically a good-natured, mind-our-own-business sort of people. We are not easily aroused, and we go on and on permitting a small situation to grow, until we suddenly awaken to the fact that we must take hold with a strong hand. It is not until then that we really bestir ourselves; but when we do, there is sure to be something doing, and that too, in a far-reaching and thorough manner, which leaves no doubt as to where we stand.

Bolshevism must be stamped out, and the business men of the country must stand shoulder to shoulder, regardless of what line they may represent, not only to put it down in the communities in which they live, but to create public sentiment against it, and to back the government to the end of stamping out this Red menace. We read of conditions in other communities and shudder at them, without perhaps realizing that we have similar situations in our own midst.

### Need Greater Than Ever

A speaker recently made the remark that the war had taken the "prod" out of production. But has it? Is not the world's need greater than ever before? And is not a great world-need a prod which no individual or community with a conscience can ignore?

It is all very well to contemplate cutting down our working hours to a minimum—some are even advocating making it four. In the face of such absurd contentions, is it any wonder that production is reduced, and the cost of everything continues to soar?

### High Cost of Leisure

Someone recently said: "One of the old ideas of the republic was that the limit of striving for success was the limit of capacity and endurance. The real evil which we are confronting today is the high cost of leisure . . .

"I only beg the thoughtful consideration of younger men who have the good of the republic at heart, seriously to consider the problem, as to whether the only way in which to meet the increasing difficulties of American life is not

by additional striving to produce more, to earn more, to economize more, and to save more.

If we would all follow these thoughts, there would be no time and no need for Bolshevism. Business would thrive, the people would have money to spend and to save, and thrift and prosperity would characterize the times.

Yes, we are facing a crisis, and unless we meet it with courage, and teach our young people and younger business men the truth of the situation and what faces them in the future if they do not rise to the emergency and put self-indulgence under their feet, and exercise the patriotism of self-sacrifice and effort, we who are in the front line trenches today will not have done our full duty.

When it was necessary to put over the Liberty Loans, public speakers, business men and private individuals gave freely of time, strength and labor, and the Liberty Loans were a success. Equally important at the present time is the birth and the nurture of the Great Idea—the idea that patriotism calls for work, and our country needs our patriotism now as never before.

The man who said, "Give me, I pray thee, a great thought that I may quicken myself with it," was a keen psychologist. He knew that Great Ideas are the motivating power necessary to stir large bodies of people, and unless we unify our efforts and crystallize the essence of them into a Great Idea, which we, the far-seeing, shall trumpet to the people, they will not catch the vision, and "Without vision, the people perish."

### Make a Friend of the Difficult Customer

In business life today, we are often meeting the customer with the Bolshevik mind. Some of them are native born Americans to our surprise. Here is a good maxim to lay down: "It is always worth-while to make a friend of the difficult customer."

This is one of the finest kinds of Americanization work which you and I can do. We can win, but we cannot force, and sometimes Americanization work is needed among our own people. Let us not forget that every time we do our work well that we have sent out a missionary of the strongest kind, to preach true Americanization to others who may be infected with the germ of Bolshevism.

Measure up to your opportunity. Do your bit. The war at home is yet to be won. "Carry on!"

The chemical student had "mistook" sulphuric acid for water, and these are the lines placed on his tombstone by his fellow students:

Here lies William Johnson  
Now he is no more.  
What he thought was H<sub>2</sub>O  
Was H<sub>2</sub> S O<sub>4</sub>.

## CAN YOU RECOGNIZE GOOD CUTLERY?

Buying good pocket knives or razors is an art known only to few. Even the experienced cutlery-buyer is taken in occasionally. The outward appearance of a highly polished steel blade, made of best steel, differs little from that of one made of lower grade steel to the eye of the not initiated. There is an old rule that the better the polish the better also the blade. Not only does the lower grade steel not take as fine a polish as the high grade article, but it would not pay the makers to expend upon inferior steel all the work and time that is required to give the blade the fine polish associated only with the best products of cutlery making.

Good steel is not only hard, but it has also an energy of its own. There are knives that will literally cut an iron nail but nothing else, because they cannot be ground sufficiently fine as to let the blade pass through the material. The cutting ability of a pocket knife, a razor or a pair of shears is derived from the fineness of the edge. A fine edge can be produced only of steel that is full of life and springiness, because the blade must not cut only but must be able to select the most suitable spot for entering the material. A high class razor cuts the beard without bending the finest hair, an inferior razor pulls the hair before cutting it, hence the unpleasantness connected with its use.

High class steel has a voice of its own. The finest tuning forks of olden days were made of the best steel possible. So the blade of a knife will speak to you when you are able to understand its voice. Touch it slightly with your nail and listen to the sound, there is a vast difference in the voice of different blades.

## THE MENACE OF ORGANIZED LABOR'S POLITICAL PROGRAM

An organization was formed in St. Louis, March 1, to combat Mr. Gompers' policy of defeating through organized labor at the next primaries and elections all aspirants or nominees for political office who do not subscribe to the tenets of the American Federation of Labor.

The new organization is called the Commercial Federation of America, and Harry M. Holdman of Los Angeles is the organizing chairman.

The importance of this movement to check class control of municipal, state and federal officials is made apparent by the shrewd tactics and practical methods that will be used by Mr. Gompers.

Socialism is the sole movement today that attempts to advance its ideas through a party.

Just as success attended other movements, such as anti-slavery, anti-liquor, etc., by non-partisan effort, just so may we look for a great measure of success through the similar tactics adopted by the officials of the Federation of Labor unless a strong effort is made to counteract it.

## AN EASY WAY TO TURN AWAY WOMEN

A neat appearing little woman, with a shopping bag in her hand, stopped before an outlying hardware store. "What a dirty place this is," she said to her companion. "I believe I will take the car and go down town."

A dirty place! If the good gentleman inside the store had heard that remark no doubt he would have been not only surprised, but extremely indignant. "His hardware store a dirty place!" To the masculine eye, looking for sundry hardware articles—nails, screws, ropes, tools, etc.—it was an ordinary hardware store. He would have seen nothing wrong with it. To the little woman, fresh from her immaculate kitchen, for which she was seeking further embellishments, it was hopeless.

That hardware dealer had a good, well assorted stock. But his window display of household utensils was dirty. There was no other word for them. In fact the whole window looked as though it had never been changed since the store was established. The paper on the floor and the shelving was full of fly specks, the glasses were foggy, the porcelain and enamel ware were dusty. There wasn't a glimmer or a glisten about the whole thing.

Further down town in one of the large hardware stores of the city a window trimmer was busy in the window, putting in a fresh display for the day. He had a broom and a duster beside him. When he finished he would have a display to please even the most fastidious housekeeper. The little woman was on her way down town. Did she stop here? We will let our readers answer that question, but we are going to be frank enough to say, "We hope she did."

## LINCOLN ON BOLSHEVISM

The following is taken from an address by President Lincoln to a committee of workingmen:

"The strongest bond of human sympathy, outside of the family relation, should be the one uniting all working people of all nations and tongues, and kindreds. Nor should this lead to a war upon property, or the owners of property. Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise.

"Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

We do many things just to prove to people that we can—like the small boy who would fool his companions and yet who deceives no one but himself.

# STATUS OF A BUSINESS MAN WHOSE FINANCIAL STANDING IS MISREPRESENTED BY A MERCANTILE AGENCY

(Copyright by Elton J. Buckley)

Since every business man has or should have a commercial rating, I am assuming that everybody will be interested in the discussion of the case submitted to me in the following letter:

\_\_\_\_\_, Maryland.

I have been in business at the above address for several years, and always believed I had good credit and a good mercantile rating. I use the service of the \_\_\_\_\_ Agency, though formerly I used that of the \_\_\_\_\_ Agency. Naturally since I dropped the \_\_\_\_\_ service, I have not seen their rating books recently, and was horrified to find the other day that they were giving me a rating of only third credit and no capital whatever. The \_\_\_\_\_ Agency, whose service I am now taking, gives me a rating of \$75,000 to \$100,000, No. 1 credit. This is not too high, as I can show by a statement at any time.

The \_\_\_\_\_ Agency formerly gave me a much better rating than now and nothing has occurred to rob me of it, except that I have stopped their service. Have they a right to blackball me in that way? I have written to them, but have received no reply. I do not remember what my rating formerly was with the \_\_\_\_\_ people, but it was much better than now. The rating they give me now (no capital and third-rate credit) is much worse than I deserve, and I am afraid it will injure my credit, though it has not had that effect as yet, so far as I can tell. I desire, however, to stand well in both books, and desire you to tell me whether I have any redress.

C. W.

The question is, therefore: Can a business man compel a mercantile agency to give him as good a commercial rating as he deserves? The answer is no, but he can compel it to give him either as good a report as he deserves, or give him none. A mercantile agency cannot be compelled to give anybody a rating, but if it does give him one it can be compelled to make it truthful.

Naturally, there is a rather wide field for discretion in such cases. For instance, suppose a merchant shows net assets aggregating \$20,000; that is, aggregating that sum on paper. This statement is furnished a mercantile agency as a basis for credit. An agency is perfectly within its legal rights if it forms an honest opinion that the assets aren't worth the owner's idea of them, and therefore rates him at \$10,000 to \$15,000. He has no redress in such a case.

But there is a point beyond which discretion cannot go. Take the question of credit. If a merchant always pays promptly, and everybody with whom he deals says so, a mercantile agency could not legally give him second or third credit, and if it does he can sue for libel.

And on the question of capital, if a merchant actually has \$15,000 of net cash invested in his business, no mercantile agency could legally rate him as having no capital.

If the writer of the above letter can show a capital of anything like \$75,000 or \$100,000, and a good credit record, he has a perfectly good action against the agency which rated him no

capital and third credit. And if he can show that the only reason for such a rating was the fact that he had stopped using the agency's service, the court will instruct the jury that tries the case that it is their duty to make the damage verdict so high as to punish the agency for what it did.

What is the offense of the mercantile agency which did such a thing? Libel. The following, which is right on the point, is from a leading case:

A publication which imputes an unwillingness or refusal to pay just debts is libellous per se, as tending to destroy the party's reputation for integrity and fair dealing. So it is generally held libellous per se to publish or cause to be published one's name as a delinquent debtor or as one unworthy of financial credit.

A mercantile agency, being in a sense a public utility, is allowed a certain amount of latitude in these cases, provided it acts in good faith. This is called privilege. Privilege does not extend, however, to cases where an agency publishes a man's rating in a book for general circulation. It applies only to cases where a subscriber of the agency asks confidentially for credit information about somebody, and is given it confidentially.

Where an agency adversely misrepresents a man's financial standing, he can recover damages from it, even if he cannot show that he sustained any. The law allows him to collect some damages on the theory that some damages are certain to follow such a misrepresentation.

## YOUR STOREFRONT AN INDEX TO YOUR METHODS

### Dead Spots in Your Electric Sign

It ought not to be necessary to suggest to a hardware dealer that he should exercise some degree of care over his electric sign. Not long ago we noticed a sign in front of a store whose owner we will say bore the name of "Johnson." Night after night, as his customers passed his place of business on the car, they noticed that at least two letters of his sign were dark, because the little bulbs back of them were dead. Somehow or other the sight of that defective sign made them believe subconsciously that this particular store was careless in its details.

See to it that your electric sign is doing its full duty as a publicity agent, working at night! See to it that every letter is doing its full duty, and so earning its way. Perhaps it would do you good, once in a while, to disinterestedly see your store front as others see it. Note how attractive or otherwise it has been made by your employees for the view of the people "that pass in the night."

Let's use our own best judgment, even if we have to curtail our personal expenditures. In the end, people will respect us the more for the independence and honesty which we have exercised.

## HOW ABOUT YOUR SALARY, MR. OWNER-MANAGER?

### Do You Confuse Your Profit With the Salary You Ought to Get?

How much salary do you draw, Mr. Retail Hardware Store Manager and Owner?

We don't want to be impertinent. The question was asked only to get you to look at something in a new light.

Have you ever confused the "profit" that accrues from your whole business with the "salary" which is due you as manager and capitalist?

Certainly you're a capitalist; your money is invested in a business. And your money should pay you more than 3 per cent or you might as well put it in a savings bank where this per cent will be a sure thing.

But about that position on your own pay roll. Do you realize that as manager, with all the care, responsibility and liability you are the most valuable man on the premises? Therefore, you should be paid the highest salary.

Too frequently, managers who are also owners count the "profit" on sales as sufficient recompense for their energies. But if those expenses counted as "overhead" eat up most of this "profit," the head of the firm loses out.

If an owner-manager is worthy of his hire, wouldn't it pay him to get on some one else's payroll, rather than give his services gratis and depend on chance for pay from his own establishment?

If a man didn't run his own business he'd have to hire a manager and pay him what was necessary.

In this case, his salary would be considered a part of the overhead. And the customers have to pay overhead expenses in legitimate prices.

In a small business where the manager takes over some of the duties of a clerk he should figure his wages as a clerk for the number of hours a day he puts in as manager.

On top of this comes profit.

Other items which belong in the overhead and which eat into profits, unless taken into account, are: Rent, light, heat, telephone, salaries of office help, drivers, etc., advertising, postage, printing, carfares, drayage, insurance (public liability, compensation, automobile, fire), bad debts, trade memberships, taxes, depreciation on material, and all regular expenses.

In other words, Mr. Owner-and-Manager, are your customers paying a legitimate price for your services, or are you paying your customers for buying from you?

Some figuring that will show up expenses in their proper places may account for losses which seemed inexplicable.

An air of prosperity is frequently followed by a full breeze.

## THE MISSIONARY OF TRADE

The salesman is a necessary factor in every successful business. Especially is this true of the salesman who goes out from his headquarters to call on the public.

You may not think so at once, but if you stop to consider the salesman's place in our domestic economy, it may give you another thought.

In large measure, the prosperity of the country depends upon the men who sell goods.

Many a factory or business house would come to a standstill if it did not send representatives into the field to tell the public of the merits of its merchandise.

The salesman is the pioneer in business, the missionary of trade, the advance agent of prosperity.

When he calls on you, give him a minute or two, that he may tell his story. What he has to say may prove to be of great value. You have all to gain and nothing to lose by listening to him for a moment.

The salesman's life is not an easy one. He is seeking to make his living. Wife and children are dependent upon him. He is engaged in an honest and honorable calling.

Don't give him the cold shoulder. He is the door-opener for trade. He can help you. Let him show you how.

If he succeeds, you profit. If he fails, you lose nothing.

Many a man who began with selling has become the master of a big business. Selling taught him the gift of merchandising successfully. Welcome him who may teach you things you ought to know.

It is a free education for you. He pays for it, not you.

## HOW TO EQUALIZE TEMPERATURE IN YOUR STORE

The temperature of a heated room is several degrees warmer at the ceiling than at the floor.

To equalize the temperature, it is necessary for the air to be in circulation. This may be accomplished with an electric fan, but, to prevent any unnecessary drafts, the blast from the fan should be confined.

As the air must be driven from the floor to the ceiling, place the fan in one corner of the room in such a position that it will drive the air upwards.

To keep the air confined, make a cardboard tube about 6 inches in diameter to carry the air up and across the ceiling to the opposite corner of the room.

This will take the cold air from the floor and force it out at the ceiling level.

Naturally the air currents are forced from a lower to a higher level, thus equalizing the temperature.

The correct temperature of a building is 68 degrees.

# Your Friends Make Your Business

**Your Friends Are Either an Asset or a Liability.  
You Alone Can Decide Which. A Lesson for  
Merchants in Small Towns as Well as Large Ones**

**Y**OU will never hear it said of a dealer, "He has a big business, but no friends."

Nor will you hear it said, "He has many friends, but no business."

Every dealer does business with his friends.

No human trait affecting merchandising is more pronounced than that which leads a buyer to give first consideration to the sales efforts of the dealer who is his friend.

Friendship being such an important element in the success of your business, it follows that to cultivate that friendship, you should take the initiative in bringing it about, and should not stick to the store and rely upon people to come in to see you and you make no effort to interview them at their places of business.

The extent of your friendship is determined largely by the extent of your acquaintanceship and the number of times you meet your acquaintances.

## You Must First Have Prospects

A certain number will come to your store unsolicited—but you can't in this way become thoroughly acquainted with all of their needs and problems, as you can by going out to see them. And, mark you this: A man may be ever so good a salesman, he may know all there is to be known about the line of goods he has for sale, and may be capable of giving strong, convincing sales talks on those goods—but unless he has the prospects to talk to, it merits him nothing. The lone inhabitant of a desert isle may be the best salesman in the world—but he won't sell goods.

## Cultivate Friends

A dealer may have the best goods in the world and closely adhere to all of the "business rules" governing a well-conducted store, yet he will fail to match the results of a competitor who adds to good goods and close attention to business details an intensive cultivation of personal friendship out among the people who need what he has to sell.

A dealer with the best of goods, a good store system, real friends in the farm homes out along the highways, and a system for keeping wide personal friendship, simply is bound to make a success of his business.

Consider for a minute the difference in their relation to your business between some one in your territory whom you know intimately and some other with whom you are not even acquainted.

The one whom you know intimately feels at home whenever he comes to your store.

The consciousness that he would feel at home is one of the reasons why he decides to

come to your store instead of going where he isn't so well acquainted.

He feels free to investigate thoroughly the article in which he is interested.

Because he knows you, understands your personality, and has, in you and in what you tell him, the confidence that friendship produces, he is more ready to have confidence in the article than he otherwise would have.

When the one, whom you do not know, comes into your store, he may have suspicions where suspicions are utterly groundless. He may have had unpleasant experiences with other dealers. So far as he knows, you are no better than they. Unless he is mighty well acquainted with the line of goods you carry, he is likely to assume a fault-finding, "show-me" attitude. From the outset, unless extraordinary salesmanship or good luck helps you, there is a natural gulf between you and that prospect—a gulf that doesn't exist when a friend in need of an implement meets a friend who can furnish him with the implement.

It isn't hard for a dealer with a friendly disposition and a good line of goods to make many friends. Given these two elements, the process is a natural one. It can be a very slow process, developed according to the number of visits that people make to your store, or it can be a rapid process, developed according to the number of visits that you make out among the farmers. There isn't any question but that the latter method is the best.

Every dealer should make it a point to call upon his farmer customers and all of the other farmers in his community who should be his customers.

First of all, the object of your visits should be to increase or begin friendly relations.

Even a trip that locates no immediate prospect or results in no direct sale is profitable when friendly relations are increased.

You will find on practically every trip, however, plenty of opportunities for paving the way directly to more business for your store.

You can find out what the farmer is going to need within the next six months, and you can get a signed order for these in many cases, subject to whatever conditions are necessary to protect both the dealer and the farmer.

You can get a list of every article on the farmer's place—the kind, the make, the number of years the article has been in use, and about when it should be replaced. You can find out what kind of crops the farmer is figuring on raising the next season.

When this information is gotten together, you will know in advance whether or not a farmer will have enough tools or implements

to take care of the crop he is going to plant if the season is good. If the hay crop promises well, you can tell whether the farmer will need another mower, rake, hay loader, or some other hay tool, and so on down the line.

Knowing the conditions which the farmer has to meet, the dealer can call attention to special labor-saving implements which the farmer can use to advantage in meeting those conditions.

He can locate prospects about whose existence he might not have known in time had he not made the trip. Many of these prospects he can close before he returns to his store. Always he can take back with him a live list of prospects for subsequent salesmanship.

By progressive work of this kind—by repeating visits, by close attention to prospects located, and by cultivation of friendships with the farmers—any dealer can get a larger percentage of trade in his territory.

Many dealers send out letters to their farmer customers from time to time, explaining the merits of the lines they have to sell and also inviting the farmer to call at their places of business and inspect their goods.

There isn't a single effective aid to reaching the farmer that you can afford to leave unused. Advertising in the home paper will prove a big help. And, remember, that direct-to-the-home advertising—the follow-up system—will help prepare the way for your personal visits. It gets the farmers who need goods into the right mental attitude to listen to your sales talks.

All of this work has enormous advantages—but do not forget that it should be supplemented by the personal touch in order to accomplish the best results.

The dealer who makes visits can also gauge his buying to accord with the need of people in his territory.

Basically, nobody knows better than these farmers how many and what kind you are going to sell.

Because you are right among these people, nobody has a better opportunity than you to find out how many and what kind you ought to buy to meet the demand.

But your opportunity to find out doesn't lie in your store.

If the facts of the case are that there is an abundance of good prospects among the people of your territory, and that their buying season will bring a more than normal number of requests for goods, you will make many dissatisfied customers and lose good profits by having a scanty stock to meet the demand. Then, too, if you are going to do about the same volume of business you did last year, it is to your interest to know it.

The facts of the case lie out among the people of your community. They can be discovered by visiting them.

## DOES YOUR STORE CARRY THE "DON'T CARE" FLAVOR?

The soda fountain is the only place where the "don't care" flavor is advertised, but not the only place where it is found, by a long shot. When the "old man" doesn't care, the clerks all sing in chorus: "The devil a care have we!"

A "don't care" clerk can give would-be patrons solar-plexus blows without batting an eyelash. He reminds us of the little girl, who, when her brother was accused of some wrong doing, said, "He didn't do it, mother; I saw him didn't do it!" So, many times—when wind and weather and patron were alike propitious—have I watched the "don't care" clerk "didn't do it!"

The "don't care" proprietor keeps us guessing; guessing what he will do—or rather what he will not do—next. He does not consider it worth while to make the slovenly clerk replace the goods with which he has just littered the counters. Why, he may have occasion to show them again in fifteen minutes; then just think of the labor and effort that would be wasted!

The "don't care" proprietor never worries. "Suppose that I did miss a sale," he says, "it is a long lane that has no turning. How fortunate for him—he would never have ambition enough to make the corners!"

"What's a few minutes?" the "don't care" proprietor says when his clerk opens the store fifteen minutes late. "Ten dollars," would have been the correct answer that morning, for Farmer Jones could not wait, so he took the trail to Smith's Hardware Store and Brown was out of pocket ten dollars in profit—with a possibility of losing one of his best patrons.

Mrs. Black says that two o'clock means five thirty when "don't care" Brown promises to deliver her purchases at that hour. Seven daylight saving bills and the League of Nations combined would hardly avail to keep "don't care" Brown abreast of Father Time.

But the "don't care" man does care when the sheriff steps in. He has a hard luck story that would make an iceberg weep. He should put the spur into business, then ride in the saddle all day instead of allowing business to kick him into the scrap heap. But this hard old world doesn't care.

## SUGGESTIONS FOR SOME SALESMEN

"Don't make your reports so long," said the manager of a small railroad to his overseer. "Cut out all unnecessary words and get right to the point. Saves time, you know."

A few days later a river overflowed its banks and washed away the railroad tracks. The overseer sent in his report in one line:

Sir: Where the railway was the river is.  
Yours faithfully.

# Small Patrons Create Large Profits

Are You Prepared to Meet Young America's  
Demand for Toys?

## TOYS IN THE HARDWARE STORE

**N**OT an innovation to be sure, but new enough in the West to cause the merchant to consider. His Eastern brother, however, contrary to all tradition, has been a bit more daring, and has made a vast success of the toy business.

The Supplee Biddle Hardware Co. of Philadelphia are the toy pioneers of the hardware trade, and put in their first stock of toys several years ago. Since then the idea has grown by leaps and bounds, until now it is almost an established fact that the hardware man should supply the youngest customer with toys.

Toys in themselves are not a specialty. They are usually carried as a side line by the notion, department and general merchandise stores, and if the hardware dealer carries them simply as a side issue, investing a small amount at first, selecting his stock with a view to price, as well as adaptability to his class of trade, he cannot make a mistake.

### The Selection of Toys

There are so many new and attractive toys for growing children that the selection of them should not be difficult. It should however, be carefully done, so that a practical stock may be secured as a starter. If the dealer is in doubt about this, the jobber is in position, out of his wider experience, to give him the necessary help. Through the advertisements in his trade journal he is able to keep in touch with the new and various lines of toys that are being put out, but a knowledge and study of the child himself is the most important item in maintaining a successful toy trade.

Not only are the children to be considered in this selection, but the grownups as well. Toys are attractive to everyone, and there is sufficient child in every man and woman to respond instantly to the sight of them. Men are always interested in mechanical toys and devices, and if they have a young son they are practically sold.

Who has not seen the proud father stand by while his young hopeful displays unheard of genius with his Erecto Toys and Construction Blocks? Then there is the tool chest, just like dad's, which never fails to appeal alike to father and son.

The growing boy is always a problem, from the time he is able to toddle until he is ready to enter high school, where he first begins to think for himself and depend on his own ability for creating diversion. The toys of the present day are doing a great deal to solve this problem. Constructive toys are exceedingly helpful to the receptive young minds, and the winter time when the children are kept indoors is the time for the dealer to put special emphasis on such toys, thus making grateful friends of the harrassed teacher and mother. For the very young children there are the colored blocks, the toys with bell attachments, rattles and reins.

For the summer season when the out-of-door sports are in vogue, the sporting toys should be featured, as well as the numerous coasters, roller skates, scudders, push-a-bikes, toddler toys and the various beach outfits which the summer never fails to bring forth.

The location of the merchant's store should likewise figure in the class of toys he selects, and the interests and recreations of his particular customers taken into consideration.

Then there is the little mother. There isn't a member of the feminine sex, old or young, that will not capitulate at the sight of a doll, and the various accessories

that go with it. When the hardware dealer selects his house furnishing supplies, he should not forget the little housekeeper. She, too, must have her household necessities, and for practically every article that the dealer buys for his housefurnishing department there is to be found a miniature duplicate.

### Bringing Children to the Store

Window displays are always the keynote of success in every line. If the dealer does not

MISS LILLIAN HOWIE

To regular readers of the *HARDWARE WORLD* the sound advice and suggestive ideas of this clever woman have been welcomed several times before. We believe that Miss Howie has outdone herself this time in the matter of the toy business, for who better than the woman knows the things that appeal to the kiddies and what woman better than Miss Howie could express her ideas as forcibly and variously.

How shall we keep Joe occupied during vacation?

wish to make a full display of toys, some new or attractive article, conspicuously placed, will always bring the child to his window.

If you are featuring household ware, there should be some space devoted to the little girl. If you are playing up dishes or stoves, you could duplicate them with a toy of the same nature. A number of dolls might be used around the table, or a cook placed at the stove. You can be sure this will never fail to interest the small daughter, and through her the mother as well, as the other members of the family. To create

personal interest in your store, to keep yourself and your store constantly in the minds of your customers is good business policy. This same procedure may also be followed in your sporting goods or ordinary hardware and tool display.

Children are easily attracted. Colorful pictures and show cards, bright bits of paper and bunting, colored electric lights, will liven up your window and draw the child.

#### Special Window Displays

If the dealer wants to make a special toy campaign, there is nothing so effective as novelty window displays. Seasonable goods always work up well in a display of this kind. The vacation time is near at hand, when the children will be free for three months. There is always that class of children that cannot go away to the country, and they must be kept busy, they must have healthful out of door sports.

Sporting goods are always pleasing at this time of the year. A carpet of soft green moss may be used on which are scattered balls, tennis rackets, croquet sets, etc. A miniature camp fire, composed of red electric light bulbs and small logs of wood, might be featured, and grouped about it sundry camping necessities, fishing tackle, with an Indian suit or two hung in the background. Garden tools, especially in the Spring, might be used by the country and suburban merchants.

#### Arrangement of Stock

If the hardware merchant is to sell toys, he must likewise have a toy department. Toys scattered promiscuously through his stock will not be noticed, and he might just as well not have any at all. If the store is small and is not departmentized, there is always an available corner in which the toy goods may be well displayed. The average merchant makes the mistake of regarding toys as a purely seasonable goods to be displayed around Christmas time

and relegated to the store room and cellar throughout the rest of the year.

This is a mistake. The toy corner or toy department should be so placed and so arranged as to be one of the first things to catch the eye of the entering customer. Toys are always bright and colorful and create a pleasing impression of the store's interior. You will invariably see the customer turn around and gaze at them while you are wrapping their package, and perhaps walk over and examine them before going out.

The children will single out your store in preference to any other just to gaze at the toys. All this is good business, for it brings your store into prominence, gives individuality to it, and draws people into it, thus increasing the sale of your other lines, and moving the toy stock as well.

This does not necessarily require a large assortment of toys, nor the displaying of all the dealer's stock. The various articles should be arranged in groups, according to their nature. The wheel vehicles, the sporting goods, the toys for the little boy, for the little girl and the baby, each should have their allotted position. A row of rubber or wax dolls make a good display and do not become soiled and untidy as do the dressed dolls. Rows of balls of different kinds and colors likewise produce a pleasing effect.

The hardware dealer who does not make a systematic display of his toys, who distributes them about his store wherever there may happen to be a vacant place, pulls them out of obscure corners, or out of his stock room by request, overlooks the psychological value, which is one of the biggest assets of a toy trade.

#### Making Friends of the Children

Children are not difficult to interest, and when interested they are your strongest allies, for children never forget. If they have received a small favor, a colored picture, a bit of candy, or a small toy, they will invariably come back; in fact they will go any distance to get just such a small favor. This is an inexpensive and always successful way of making friends of the children and bringing them to your store. If a merchant is to have a toy department, this suggestion might well be followed.

One of the readers of the *HARDWARE WORLD* recently told us of his success with a supply of broken candy. Cheap ar-

Little sister also shares the Kiddie Kar.

ticles, such as toy balloons, paper windmills whistles, and numerous other inexpensive toys might likewise be used for this purpose.

The country dealer and the city or town community dealer is most fortunate in being in position to make friends of the little ones. They see practically the same people all the time and the children grow to know and like them. He can make of his store a place where the children love to come. The country children do not see the new and fascinating toys that are being constantly brought out, and their arrival in the progressive hardware store of the town would be an event to be watched for.

The Young Hopeful displays unheard of genius with his construction toys.

The city merchant should make a bid for the numerous pennies which these fortunate children are usually possessed of, either by gifts from fond relatives or earned in their spare moments, and bring them into his store in dollars and cents. These spare pennies usually go for movies, candy and ice cream, but if the neighborhood merchant, or even the down town merchant, will display some toy not already pos-

sessed by these sophisticated young people, they will save their pennies until they have sufficient to buy it. They will dream of it, think of it, plan for it, tease for it, and if they cannot obtain it by their own efforts, some older, impressionable member of the family will finally purchase it for them.

#### Value of Being on the Spot

Toys would be more readily sold if available. Too often they are confined to the department or general merchandise stores in the center of town. They are not brought before the children of the community.

The neighborhood dealer should make the most of this. He should be Johnny on the Spot, so that the many birthdays that occur in his vicinity may be provided for, a tedious rainy afternoon livened by something from his stock, or the long days of a sick child made bright. Thus the merchant comes into touch with the daily life of his neighbors and makes friends as well as customers of them.

Too often a bright bit of ribbon, some wearing apparel, will be bought at the dry goods store to meet just such occasions, because there are no toys to be procured nearer than the shopping district.

The hardware dealer situated near a school is most fortunate. If he is clever and a good business man, he will know personally the majority of the boys in the school, and he will always have on hand the wherewithal for the afternoon and recreation periods. This is the kind of boy that responds to the "how are you, pal?" treatment, the man in the making, as it were.

#### Prepare Now for the Christmas Season

The Christmas season should be a harvest for the successful dealer, both in towns and cities. Now is the time for merchants to con-

#### THE THREE BEST REASONS WHY TOYS ARE ONE OF THE MOST PROFITABLE LINES A MERCHANT CAN HANDLE

What wouldn't anyone give or do to bring childhood's happy smile to the face of the tiny tot on the left? "Little Mother" must also have her household equipment. Think of the joy of giving brother a swift gallop through the sitting room on a dreary, rainy afternoon.

sider what they will have for Christmas, and do their Christmas buying.

Toys at Christmas have a fascination that exists at no other time of the year, and the hardware merchant who considers himself a progressive, up to date business man should be getting ready for the holiday sales. The general volume of business is bigger at that time, more people come to your store, and if they see the toys they are looking for they will not go further. The country merchant should be most successful at this time, for he has not the large department store to compete with. He can be an authority in himself.

One of the progressive, western readers of the *HARDWARE WORLD* tells us that he is putting in a \$10,000 stock of dolls for this coming season, so great was his success last year. Victrolas are also a salable article at this season of the year.

The hardware merchants, one and all, large and small, who will plan early and well, display their stock and educate the people to look to them for what they want for Christmas shopping, cannot help but secure a profitable toy trade.

Advertising in this instance is invaluable. Attractive advertising in the daily paper, especially in the case of the country merchant, posters and show cards in the windows, a big sign, electrically lighted, if possible, in front of the store, spelling "Toys," will interest the older people. Make a big feature of your toys both in your window and in your store, let the children know that your store is the Santa Claus headquarters, and the little people will not fail you.

#### **Infinite Opportunities in Toys**

The hardware trade is making wonderful progress, constantly adding new lines, always reaching out for a larger volume of business. The toy trade is comparatively new, but it has wonderful possibilities, which the hardware dealers, as business men, cannot fail to see.

Give this proposition careful consideration, put in a stock of toys now, and before many months elapse we are confident you will have something of interest to tell the *HARDWARE WORLD*, about the "Value of Adding a Line of Toys to the Hardware Dealer's Stock."

A gentleman from New York went out into the Jersey farm districts to hunt up a farmer by the name of Smith, whom he had some business with, but had never met. After driving some miles into the country, he located the house as directed. The only person in sight, however, was a small boy very busy whittling.

"Young man, is your father in?"

"Yep," replied the boy.

"Well, I would like to see him; can you tell me where I will find him?"

"Sure," came the answer, "he's out back in the pigpen; you'll know him—he's got a hat on."

### **GET ABSORBED IN YOUR WORK**

There are probably two or three in your own office—men who are continually upset about something, holding on to their toes because some one has stepped on them, or rubbing their heads because some one has "knocked" them. They have a profusion of feelings and a confusion of ideas. Always some one is doing something against them, while the chances are everyone is too busy scratching his own gravel bed to bother about the other fellow's. What our friends need, let the cap fit whom it will, is to become so absorbed in their work that the work will entirely absorb their feelings. It's a sure cure for the sensitive.

Today is the morrow which our imagination filled with trouble that never happened—and suppose it had happened, is this the only question with trials and tribulations? Listen to the doleful wail of Benjamin Franklin, who lived from 1706 to 1790:

"The day is short, the work is great, the workmen lazy, the wages high, the master urgeth; up then and be doing."

### **THE EVERLASTING QUESTION**

"What makes the folks to Jones' flock?"

The eager children cry.

"Why Jones has bright, fresh advs., you know,"

The ad man made reply.

"He does not leave a moss-grown ad,

Without an idea in it;

But bright, and terse, and snappy advs.—

And trade, he's bound to win it!"

Don't leave packing cases in the way out on the sidewalk just to show people what a lot of goods you are getting. They care more about a right of way than about the size of your stock.

When you think you know so much about your business that the trade journals can't tell you anything, you have learned more about it than anyone else ever did.

#### **FINEST TRADE JOURNAL EVER READ.**

Allow us to congratulate you on the "*Hardware World*." Without hesitation I can say it is the finest trade journal that I have ever had the pleasure of reading.

It is with pleasure we enclose remittance covering our subscription, and we will be pleased to receive same monthly.

**WILLIAM P. KELLAND,**

Manufacturers' Agent and Hardware Factor,  
London, England.

## OUR COPPER

Put your hand in your change pocket to pay for your morning paper and you put it upon one of our most remarkable national resources.

Copper! Ever think of it?

The telephone, the telegraph, the trolley car—what would they be without copper? The war—do you know that?—used up a million tons!

Germany stole all she could get in France and Belgium. It was a crying need. Back in Berlin they had iron money—so that the old American slang injunction not to take any had no meaning for the Hun. But they knew why. They were saving copper.

Germany once controlled the copper supply of the world, though before the war our own production was head and shoulders over that of any country. In 1917 and 1918 we imported some billion pounds. Our exports were nearly two billion—this not including that exported in the form of munitions.

The world's copper supply shows no increase. No surplus is accumulating, consumption is increasing, and few unexplored fields remain. According to normal rate of increase we should produce more than three billion pounds in 1920. But there isn't that much copper apparent.

The German Metall-Gesellschaft is "done in," at least for the time being, and so is German control of the world's copper. Russia and the Belgian Congo have copper, but, primarily the United States continues as leader in copper production, and there isn't enough to go around.

## DON'T BE EXTRAVAGANT WITH TIME

The main difference between the man who succeeds and the man who merely grovels along in a mediocre sort of way is that one utilizes every hour of his time to the best advantage he knows how, while the other is content to dabble. When business is not particularly brisk and the weather is depressing there certainly is a temptation to sit at the window and watch the crowd go by. But those who succumb to such temptations wake up sooner or later to find that the whole procession has passed them and left them in the lurch. Don't sit at the window. Get out and hustle.—Forbes Magazine.

The successful proprietor or clerk really likes folk—is tender-hearted instead of being tender-skinned.

If you would rather wait on customers than to be governor of a state, your business will reward you.

The man who never forgets to make smooth the way for the business of tomorrow will be walking that smooth way day-after-tomorrow.

## SUNDRY DEFINITIONS

Competitor. The man who thinks you are as bad as you think he is.

Contract. Material for the development of of aspiring legal talent.

Creditor. A contemptible pirate whose demands are always unreasonable.

Debtor. An unhung villian with a bum memory.

Detail Sheet. Tells you a story you might believe if you understood it.

Dividends. A certain per centum per annum perhaps.

Filing System. Storage for lost and found articles.

Financial Statement. Shows what you would be earning if you were.

Note. A token of remembrance.

Promise. A reckless prophecy which may or may not come true, depending upon whether it does or not.

Salesman. A slick guy who sells something he can't deliver to someone who doesn't want it.

Stenographer. The only woman who takes dictation without resentment.

Superintendent. Gets little if he does and hell if he doesn't.

Trade Unions. Permits the employer to operate his own business on Sundays and holidays.

## EUROPE'S PAPER CURRENCIES

Europe is flooded with untold billions of irredeemable paper money, legal tender for all purposes and circulating in the country of its issue only. This is the thing which is affecting the normal rate of exchange, the real fact being that such paper is everywhere depreciated, and in the various countries in such a way as to make it obvious that exchange has nothing to do with the matter. On January 1, 1920, it took the following amounts of their paper money, respectively, to buy \$100 of American gold:

|                        |        |
|------------------------|--------|
| In English money.....  | \$ 129 |
| In French money.....   | 216    |
| In Italian money.....  | 250    |
| In German money.....   | 1,025  |
| In Austrian money..... | 2,979  |

A month later, February 1, 1920, it took the following amounts to do the same thing:

|                       |           |
|-----------------------|-----------|
| In English money..... | \$ 138.65 |
| In French money.....  | 257.66    |
| In Italian money..... | 301.47    |
| In German money.....  | 1,904.04  |

Austrian money seems no longer to be quoted. Nothing in the exchanges nor the balance of trade has affected or could possibly effect such radical and divergent changes in thirty days.

Wouldn't it be nice if everybody's work was as easy as the other fellow thinks it is?

# Be Magnetized By This Human Dynamo

Mentioning No Names, Here Is An Inspiring  
Record of Achievement

**J**UST in illustration of what energy, ideas, enthusiasm and ambition will do for any man who will give them a chance. Here is presented a glimpse of the career of a remarkable man. We are also glad that we are able to present his features in the small reproduction which we were finally able to wheedle out of him. Other than this, we cannot be very personal in this story. Some of our readers may recognize the man through his picture or from the unique record.

As a matter of fact, it is very rarely that a human narrative is suitable for publication without the mention of names, or the connection with familiar institutions, to create an interest. Very rarely have we seen published an article that mentions neither an individual, nor institution. Thus we perform the unusual in dealing with the unusual.

Here is a man, who by his very energy, his great enthusiasm, his instinct for organization and efficiency, and his everlasting "staying at it," kept on enlarging his own job until finally it fitted his own proportion.

Just let us go back in brief to this man's business beginning. At sixteen years of age he had his choice between going to college and exposing himself to theories, or entering the college of the world. He chose the latter and divorced himself, as it were, from family ties, making up his mind not to accept a cent from the family, but to support himself or starve.

His first position was that of bookkeeper in a large steel plant, and when the day's work was finished in the office, he went into the mill and began to pick up the practical end of the business. Many a night in the position of a blacksmith helper he wielded the sledge hour after hour in the forming of tools. Assisting in the hardening and tempering of such tools, he soon became efficient in that particular line. He then took up night work, until the early hours of the morning as helper on a crucible furnace, making tool steel. From department to department he made it a point, however, always to be on the job bright and early in the morning and not work by the clock.

At first he received \$18.00 a month and lived five miles from the plant in a little boarding house in a room probably big enough for a bed and chair. He walked the entire distance to and from work in order to save the ten cents. During the next fourteen years, he became head melter of a large steel works, then the head roller, then the superintendent of the plant and

finally assistant to the general manager of a large combine controlling thirteen or fourteen plants. It was only by this method—being prepared to take the job ahead when it was vacant—that he was able to climb.

## Not Satisfied With One Man's Job

Some fifteen years ago, this six foot three, two hundred and fourteen pound human dynamo became most restless with doing what was considered a big day's work for one man. He conceived the idea that if a man's work was properly systematized to the highest degree, if the proper amount of forethought was exercised (equal to the average man's lack of it), if the same amount utilized in his business as is wasted in the average man's life—that such a man could increase his efficiency—his out-put, as it were—just as any piece of highly tuned machinery.

He realized that in order to make a success he must increase his efficiency. He stopped and analyzed himself—to ascertain the most predominant qualification. This being completed, the next step was to analyze the various fields of activities with the object of applying the result of the former analysis.

The Advertising or Promotion of Sales field was selected as the most ideal for his experiments. Today, fifteen years after the birth of this idea, it's an accomplished success—a realization.

This man is personally employed as the individual active advertising and sales promotion manager of some thirty-five of the largest and most prominent industrial firms in their respective lines in this country—located in as many different cities.

## Is Not a Figure Head

He is not a consultant nor an agent, but a dynamo of each of the thirty-five firms referred to above. He has his departments at each plant—some consisting of but a few operators, while others employ a force of several score. At each he has his own personal desk.

As a natural course of events, thousands of letters a day are referred for this man to handle, on account of his exceptional ability in writing such letters. Some are personal letters from salesmen or jobbers wanting advice and assistance. Others are follow-up letters replying to inquiries received by the sales department and which, in many cases, justly come under the duties of a live advertising manager. Besides these, there is the regular department's mail.

In other words, he assumes many duties in

addition to what is usually considered the duties of the average advertising manager. It is done with such dispatch, regularity and originality that, without a sign of a contract, he retains his position year after year—many of the factories having employed him uninterruptedly for fourteen years.

He is on the regular payroll of each company.

#### How Does He Do It?

By working arm in arm with ingenuity, system and thoroughness. Gradually as he mastered the various barriers, he began to surround himself with a staff of unusual specialists—each one receiving a thorough inoculation of his tremendous surplus store of energy, originality and keen judgment by an extensive course of salesmanship under his personal supervision.

His studios or headquarters are located in a central Ohio town. They consist of a group of most unusual structures in one of the most restricted residential corners. The buildings have been especially constructed for the peculiar needs of this unusual organization—flower boxes at every window, hardwood floors, dotted here and there with a tiger, bear or deer skin, rich and artistic lamps advantageously placed, every piece of paper having a definite place and every desk clean and free from surplus refuse.

#### System Reigns Supreme

Every operator works on an hourly schedule—an hour for each specified duty—each working in complete harmony with the respective offices located at the different plants by whom this man of many jobs is employed. If you should ask any salesman of any one of the firms if his advertising manager worked for any other firm, he would reply in the negative—so efficient is his work.

#### Confession

We declared at the start that we would mention no names. Our intentions were really sincere, but now that the story is done, we think it only fitting and appropriate to give credit where credit is due. The man who has performed the strikingly unusual and built up a unique position in American industry is G. P. Blackiston of Ohio.

It is impossible to connect Mr. Blackiston with any one locality. He has offices in Cleveland, several of them. His own organization and headquarters are at Canton. Mr. Blackiston himself is all over the state and all over the United States, keeping in touch with the movements of industry and the varied interests of his many industrial connections.

Among the great institutions whose sales and advertising Mr. Blackiston supervises are such as the Chain Products Company, the Van Dorn Tool Company and the Van Dorn Dutton Co. There are nearly a dozen others. This only gives an idea of the nature of Mr. Blackiston's activities.

## "FIXING UP" THE ORIENT WITH AMERICAN TOOLS

The Oriental carpenter is learning to do better work with less effort through the use of American tools.

The saw which was brought into China by western missionaries, is being almost universally adopted in the country since it is easier to manipulate and at the same time more durable than the native tool. The Chinese-made saw is similar to the American wood saw, only more cumbersome, having a large unwieldy blade with a wooden frame and being worked while set at an angle. The steel is much softer than the American metal and consequently more easily bent.

It might be said that this Indian carpenter represents the trend of the American trade unionists carried to the Nth degree. We wonder how many hours a day he continues this grilling toll.

American hammers, drills, and rivets are also in demand, since they are better balanced, as well as being made of harder metal than the native product. These tools were at first introduced into the Orient through the agency of the missionary trade school, where native boys are taught carpentry after the American method. Now, the missionary school furnishes only a small part of the market for carpenter's tools in China. Business houses are buying the American brand and native carpenters are requiring implements from the United States in order to use their western training to best advantage.

India, too, is becoming interested in American tools, according to reports. Here, also, American missionaries are combining religion with practical lessons in carpentry. Industrial schools are turning out workmen who are demanding the American saw, hammer, and drill, and in consequence the American manufactured article is taking a large part of the trade from Great Britain, Germany and Belgium, formerly the chief sources of hardware supplies in India.

# Getting the Right Woman to Demonstrate Household Appliances

**T**HERE is more to arranging the demonstration of a household efficiency aid than may appear on the surface. Perhaps in the days when kitchen cabinets, vacuum cleaners, electrical washing machines and similar modern appliances were novelties, women went to see these articles demonstrated out of sheer curiosity. But not so today. There are too many of such articles in everyday use to attract an audience because of their novelty.

Lots of women may attend these demonstrations merely as an entertaining and instructive way in which to pass an afternoon, so unless your demonstrator is the woman for the job, you might as well quit giving demonstrations.

## Offsetting Idle Criticism

Such idle women—at least a goodly proportion of them—are there to criticize and to find fault with everything the demonstrator does. So the less scope there is for fault finding, the more likely you are to make sales.

Not that the average woman means anything harmful, but she does love to gossip and make mountains out of molehills, so some trivial fault in connection with the demonstration may cause her to prejudice her friends against the household efficiency aid in question.

You cannot put a ban on free speech that goes on while your back is turned, but you can counteract it—even stop it—by the application of psychology.

Forget for the time being that you are staging a demonstration. Try to imagine that

you are a speaker giving his first big lecture. He does not know how it will appeal to his audience, so he works out some intimate stuff that will pull him over the rough spots. He knows what sort of an audience will be present by the nature of his subject, and the kind of town and hall in which he is delivering said lecture.

Similarly you are in a position to know, bearing in mind the kind of article you are demonstrating and your particular clientele, just what type of women your audience will comprise.

## A Psychological Study

If you are out to reach the wives of mechanics, bricklayers and others of the working classes, it would be the height of folly to engage a demonstrator with the airs and grace of a duchess.

Get the demonstrator who is either a good mixer and can adapt herself to suit each and every audience, or secure a woman of their own class. There will then be no fear of any detail going over the heads of the audience.

If the audience is comprised of the wives of professional men, you will require a refined lady of high mentality. A woman who knows exactly the kind of homes her spectators come from and what their homes lack. There is nothing like speaking from actual experience, for the average woman is quick to perceive when the demonstrator does not know her subject, with the result that interest in it wanes.

Here is a successful demonstration when the right woman is obtained to make the demonstration. The merchant must carefully consider the nature of his customers, whether they will be young or old, how they will be dressed, what they are interested in and get a demonstrator that will be on a par with them. It is fatal to talk over your customers' heads. At the same time you cannot afford to have a demonstrator who will be too patronizing and talk down to your customers, as though she were a superior person.

Here is another example of the demonstrator being perfectly at ease, having her auditors interested and following every word she says.

#### Know Your Town Conditions

In the city the demonstrator can talk glibly about all kinds of fuels for domestic purposes, but in a small town she is confined to electricity, oil and coal. To talk about cooking something over the gas stove would immediately betray her lack of local knowledge, so if your demonstrator is from out of town and you are in a rural community, let her imbibe some facts concerning local home life before she starts in.

#### Avoid "Young and Pretty" Demonstrators

Many demonstrations of household appliances fail because the feminine demonstrator is young and pretty. She is the right girl in the right place in the exhibiting of cosmetics, gowns, candy, fountain pens, and in other things where an air of youth is present—or when an appeal to the other sex is made.

But the household arts are more than skin deep. The young woman just starting in house-keeping may not object to a woman of her own age showing her how she can do her housework more quickly, efficiently, and cheaply.

But the woman of mature years—and this is the class whose prejudice must be won over by staged demonstrations—deeply resents being taught how to do things by that "painted-up young creature," as they will probably describe her.

#### The Ideal Woman for the Job

The ideal person for the job of exhibiting household appliances is a motherly type of woman, between forty and fifty. She should possess the knack of kidding her audience along by telling them that she cooks a certain thing this way or that way, and not appear to teach

them how they should do it. The fact that she has found a certain satisfactory method and seems to possess the years of ripe experience to make her statement ring true, will cause many mature women in the audience to do likewise.

The newlywed element in your audience is sadly conscious of her limited knowledge of housekeeping and will eat up everything an older woman says on the subject.

#### One Exception

But there is just one exception. If you number among your customers those who entrust the smooth running of their homes to servants, get an efficient colored girl to act as a demonstrator and have your clients invite their hired help to the demonstrations.

#### A POWDER POEM

A woman is queer, there's no doubt about that.  
She hates to be thin and she hates to be fat.  
One minute it's laughter, the next it's a cry.  
You can't understand her, however you try.  
But there's one thing about her which everyone knows—  
A woman's not dressed till she powders her nose.

You never can tell what a woman will say,  
She's a law to herself every hour of the day.  
It keeps a man guessing to know what to do—  
And mostly he's wrong when his guessing is through;  
But this you can bet on, wherever she goes  
She'll find some occasion to powder her nose.

I've studied the sex for a number of years,  
I've watched her in laughter and seen her in tears;  
On her ways and her whims I have pondered a lot,  
To find what will please her and just what will not;  
But all that I've learned from the start to the close  
Is that sooner or later she'll powder her nose.

At church or a ball game, a dance or a show,  
There's one thing about her I know that I know—  
At weddings or funerals, dinners of taste,  
You can bet that her hand will dive into her waist,  
And every few minutes she'll strike up a pose,  
And the whole world must wait till she powders her nose.

—Edward A. Guest.

Pay day is sure to be cloudier and chillier  
than the day when the debt was contracted.  
Beware of contracting debts which cannot be  
met readily.

#### "HARDWARE WORLD" A TEXT BOOK TO HELP MAKE BETTER SALESMEN

Enclosed find our check for subscriptions for our employees for the **HARDWARE WORLD**.

We assure you we certainly do enjoy this publication. It may interest you to know that we have among our employees a class in business administration, and the **HARDWARE WORLD** is one of our regular publications for study, in helping to train and develop our sales force with a view to making them better employees, better salesmen, better business men and women.

The **HARDWARE WORLD** is of distinct help and value to us.  
**ERNST HARDWARE CO.**

### A LIVE WIRE IN GALVANOID SCREEN

One of the pleasantest personalities, as well as one of the most promising and energetic, connected with the hardware manufacturing industry of the West, is that of L. G. McDonald, sales manager for the American Wire Fabrics Co., at Chicago, Ill., headquarters for Galvanoid Screen Wire Cloth.

The fact that Mr. McDonald is of Scotch descent, and good old Indiana stock, is guarantee enough of his character and reliability as a faithful worker for the mutual interests of the company he represents and of his customer. His many friends in the trade indicate perhaps the highest tribute that can be paid to his abilities and accomplishments, and the sales expansion of the American Wire Fabrics Co. under his administration has indicated in some measure the degree of his success.

Mr. McDonald was born in New Carlisle, Indiana, his father being a physician there for a number of years. It is a peculiar coincidence that Mr. McDonald comes from the same town that President C. K. Anderson of the American Wire Fabrics Co. lived in. Dr. McDonald was in fact the Anderson family physician for some thirty odd years.

Mr. Anderson is older than Mr. McDonald, however, and left the town when Mr. McDonald was a small boy. With the passing of the years, Mr. McDonald was successively an instructor in the South Bend Business College, a member of the Land Office at Washington, D. C., and finally back at Chicago again for his wife's health, he applied at the office of the American Wire Fabrics Co. for a position. Mr. Anderson did not recognize his former townsman, but when the South Bend Business College was given as a reference, Mr. Anderson casually mentioned that that was near his original home. Before long they were intimately chatting with each other of the connections and associations that were common to both in their early years.

Mr. McDonald was at first clerk and secretary to Mr. Anderson, but later his inclination and interest in the selling of goods developed and he was appointed Sales Manager, which position he still holds. The products of the American Wire Fabrics Co. are well known to the trade, Galvanoid screen wire cloth being standard and in keen demand. The company's factories are located at Clinton, Iowa; Niles, Michigan, and Mt. Wolf, Pennsylvania. Galvanoid is represented in the far West by the Ewing-Lewis Co. at San Francisco and Los Angeles, and by D. L. Herman at Seattle, Wash.

### VALUE OF GOOD-WILL

Good-will has a thousand elements.

The good-will of others means confidence in your honesty, in your sincerity, in your kindness, in your good intentions.

Good-will says, "I trust you"; "I like you"; "I believe in you"; "You ring true."

Good-will is essential to success in any enterprise.

Business cannot grow without it. It is the merchant's most important asset.

Good-will makes buying and selling a pleasure to buyer and seller.

Every dollar in the till owes its presence there, in some measure, to good-will.

### SENSIBLE PHILOSOPHY

'Taint no use to grumble and complain;

It's jest as easy to rejoice;

When God sorts out the weather, and sends rain,

Why, rain's my choice.

—James Whitcomb Riley.

The best substitute for the saloon is a bookcase. Whether you find it in a public library, in a bookshop, or in your own home, the bookcase can match every thrill that the saloon ever gave, and add some of its own. If necessary, you can put a foot rail along the bottom shelf and read standing up.

Does the man at the next bench, counter or desk need your help? Help him out. Tomorrow you may need his help.

### ONE KIND OF ANGEL

A young country hardware clerk had married a "city girl." A friend, meeting Charley's father in the village, said that he had heard that Charley said his bride was an angel. "Do you think she is?" he asked the old man.

"Wal, I don't know ef she's an angel," said the old man thoughtfully, "but I'll tell ye one thing, Henry, she's certainly a durn high flyer."

### GETS MORE HELPFUL INFORMATION FROM "HARDWARE WORLD" THAN FROM ANY OTHER

We are enclosing our check covering subscription to the **HARDWARE WORLD**.

We are subscribers to several hardware publications, and all are good, but in some way we seem to get more valuable information that is applicable to the problems of retail merchants and to the lines of goods which we sell, from a perusal of the **HARDWARE WORLD** than we do from any other.

Wishing you every success, we are

Sincerely yours,

Ohio

DAVIS HARDWARE CO.

## UPHOLDING THE BLACKLISTING OF BAD DEBTORS AND COMBINING TO REFUSE TO GIVE THEM CREDIT

(Copyright by Elton J. Buckley)

A very interesting decision has just been handed down by the Supreme Court of the state in which the case occurred (Florida, the case was *Putnal vs. Inman*) which establishes two important things, both of which touch every manufacturer, wholesaler and retailer who sells merchandise on credit. They are:

1. That it is legal for a body of traders to make an agreement not to extend any more credit to a customer who owes any one of them.

2. That it is legal to write to a customer threatening him that if he doesn't pay you will send his name to an association as a delinquent debtor.

There has always been more or less doubt on these points, and this decision is the first squarely cut disposition of them that I have seen. While the case is a state case, it is not based on any statute peculiar to Florida, and therefore has a good chance to be generally followed as the law everywhere.

The case in question was a libel suit brought by a customer of one of the members of the Perry Merchants' Protective Association. The customer owed a bill to this member, but refused to pay it on the ground that he didn't owe it. After failing to collect, the member listed the name with the association, it was communicated to other members as the name of a delinquent debtor, and the customer found his credit cut off. He then entered suit for libel, claiming that listing him as a bad debtor was an unwarranted assault upon his reputation.

It appeared when the case was tried that the Perry merchants had a pretty tight organization. The members had executed an agreement among themselves to send each other copies of all their delinquent accounts, and to refuse to give credit to anybody who was listed as a delinquent. The agreement even went so far as to pledge all the members, in case they gave a delinquent credit in violation of the agreement, to pay everything which he owed the other members.

It appeared that this customer had been repeatedly dunned by his creditor, whose last letter stated that he "was under obligation to report to the association attorney the name of every person who does not pay his or her bill promptly," and that he "would dislike very much to turn your name over to the association, as it would probably affect your credit in the town of Perry."

I have always felt very doubtful about the legality of an advance threat to blacklist, but in this case the court cited it, apparently with approval, as evidence that the debtor had had plenty of warning.

The lower court sent the case to a jury and the blacklisted customer got a verdict. The upper court reversed, however, and decided in favor of the dealer, on the ground that everything he had done was within the latitude that a merchant has to protect himself against bad debts. Following is the core of the decision:

Merchants have the right to organize for their own protection and to enter into mutual agreements for the purpose of giving each other the benefit of their knowledge about those in the community who meet their obligations promptly and those who do not, and a communication on the subject, made by a member of the association to the other members, is privileged, if made in good faith and in such a manner and on such an occasion as to properly serve the purpose of the association.

That is to say, it is privileged and not libelous, even if not true, if the merchant acted honestly and in good faith throughout.

The court cited two other cases, one in Washington and the other in New York, as follows:

### From the Washington Case

"No court, so far as we are advised, has held it unlawful for dealers in a common line of goods to agree among themselves not to extend credit to a person who has defaulted in a payment to some one of them.

### From the New York Case

No rule of public policy forbids a wholesaler to refuse to credit a retail dealer who has made default in his payments to another wholesaler.

The distinctions between these libel cases which are founded on blacklisting debtors are very narrow. Just about the time the decision in the above case was handed down, the Iowa Supreme Court handed down a decision in another case very similar. In the Iowa case the plaintiff admitted he owed \$16. The dealer claimed he owed \$20 and refused to give him a receipt in full for \$16. The debtor refused to pay the \$20 and the dealer blacklisted him with his association. He, too, sued for libel, and here the court sided with him, but not in a way making this case inconsistent with that first discussed. The basis of the Iowa decision was that the merchant had not acted in good faith in blacklisting his customer, but had done as he did in order to force the debtor to pay a debt which he honestly thought he did not owe, and for revenge.

The moral of all this is that a merchant should be absolutely sure that his claim against a customer is correct and undisputed before he blacklists it.

Whatever your age, cultivate open-mindedness. Be ready to listen to the other fellow's opinion and to give it tolerance. If you think he is wrong at first, consider carefully before you decide. When you find you are wrong, change over to the right side instead of sticking stubbornly to the wrong side.

You're on the right road when you get so interested in your work that you let your pipe go out.

# Don't Let Light-Fingered Customers "Lift" Your Counters

**H**ISTORY shows that the period following great wars is always one of unrest and a disturbed sense of value. This evinces itself in wild-cat schemes and extensive stock promotion plans. There seems to be a distinct effort to meet the high cost of living and doing business by risks and ventures.

All people are not able to undertake enterprises of this kind and so many of the none-too-honest nature take risks with the idea of getting something for nothing.

Retail merchants all over the country have been reporting an epidemic of petty pilfering, and the losses have been heavy. Not only was this the case at Christmas time, when holiday crowds thronged the stores, but it has continued since that time to an unusual and surprising degree. Strange subterfuges are resorted to.

Small tools in the hardware line and articles of general merchandise disappear mysteriously while the salesman's attention is attracted in another direction or his back is turned. Even such valuable articles as furs, shoes and jewelry are the subject of the attention of those who long for them and have not the price to pay for them. Stores, particularly which handle small items shown upon the top of the case, suffer much loss. Where there are many articles on display one can be taken without the loss being very noticeable.

Druggists have found it wise to keep expensive items on display under glass, and to make an arrangement of these articles on top of show cases in a straight line of a semi-circle or some arrangement of that kind, so that a gap will be noticeable immediately.

This is a plan that the hardware man may well follow on his cutlery, sporting goods and specialty counters.

## A Plan to Prevent Theft

One storekeeper lost so many articles of certain lines averaging from \$1 to \$5 that he devised this plan of showing his wares and yet not losing them. He put a long narrow table or counter in the center of his store. Upon this he displayed exactly twenty articles at a time. Each article was placed in a certain location. For example, on that table top he used twenty circular white lace paper doilies. Each doily bore a number from one to twenty. Each item bore a sticker with a corresponding number. Thus, doily No. 1 had upon it a pocket flashlight with a small sticker also marked No. 1 and with cost and selling price.

The same method was pursued with the twenty articles and a list of these kept in a book used expressly for that purpose. So, if article 12 disappeared the vacancy was at once notice-

able and by referring to the book one could soon discover that article 12 was a thermos bottle, an automobile horn or whatever that number happened to be.

This simple method almost entirely eliminated loss. And several interesting facts were discovered. It was found that certain spots on that counter table were easier to steal things from than other spots. That is, that the temptation to slip things from the corners was greater than from central locations. And so, these articles were, after a time, fastened down by thumb tacks holding a piece of tape, or some other suitable means.

## Watch the Customer and Stock

Another element in eliminating petty pilfering is to train the clerks to keep a watchful eye upon their stocks and the store at all times. It is just as easy to put out an even six or four articles for examination at a time, as to put out a large number. And by having a fixed rule of display a missing article will be discovered at once.

It is easy enough to say to the customer, "You don't care for these anyway. I will show you something you will like better," and to put the least desirable article back in place. Then, clerks should learn that as much as possible they should face the customer and not turn their backs directly to them. This will make it more difficult for those who are trying to pick up things.

A favorite present method of petty pilfering is for the one who is dishonest to stroll through the store until someone is discovered on the customer's side of the counter, who is engaged in looking at some article, and who already has made purchases which are wrapped and have been laid upon the counter to give greater freedom in examining the goods under consideration. The pilferer wanders along, pauses at the same counter, very near the other customer, and when he or she moves on, picks up these wrapped bundles or packages as though they had belonged to him or to her. By the time the genuine and honest customer is through with her purchase and turns to pick up the parcels which had been laid down, they are gone and no one suspicious is in sight.

Here, again, the clerks can guard the customers by watching just what is laid down and keeping an eye on anyone who acts in a suspicious manner. Some stores have found it necessary to keep a private detective and others have appointed one in each section to act as store detectives; still others use a rotating system requiring different ones to keep watch for a given period of time. This develops a keen-

ness of observation in all. It is necessary in a case like this to give the store force a little instruction, so that no one may be charged unfairly, or unjustly and offended. In every case tact is necessary.

#### Call the Customer, If You're Sure

The clerk who know the customer had taken two spark plugs simply took the pay for two out of the bill handed to him. When the customer looked at his change, he said: "You have overcharged."

The keen clerk's reply was, "Not for two spark plugs. They are so much each."

The slippery-fingered customer said nothing and went away.

Great care must be taken that mistaken accusations are not made and there is no chance for a legal come-back. A man recently arrested on a mistaken charge was awarded a very large verdict, reaching up into thousands of dollars, because of the humiliation and loss he had been put to.

Petty pilfering requires watchful care and firmness on the part of the one behind the counter. It is an easy matter to say, as one drygoods clerk did, "I had five towels here, madam, and now there are only four. Has one slipped to the floor on the other side of the counter? No! Perhaps it has been drawn into your muff by mistake. Would you mind looking?"

The clerk promptly put her own hand into the muff and drew out the towel. The customer profusely apologized.

Petty pilfering carried on throughout the year may cause a tremendous amount of loss, and the retail storekeeper must guard his profits in his own interest and also in the interest of his honest customers, for those who pay their bills, really have to pay for those who do not, because all expense must be met by the income, if the business is to continue. Look out for petty pilferers!

If you are going to learn as you go along, you must give up some time to the learning and some attention to what you learn. If you let knowledge slip in one ear and out the other without giving it any attention, how can it be of any use to you.

#### A DICTATOR

Booth Tarkington tells of an old colored man who appeared as a witness. In the course of his examination these questions were put to the man:

"What is your name?"

"Calhoun Clay, sah."

"Can you sign your name?"

"Sah?"

"I ask if you can write your name."

"Well, no, sah. Ah nebber writes ma name. Ah dictates it, sah."

#### A SOPORIFEROUS WHEEZE

Someone has perpetrated the following:

"Soap is an article used at the present day with water, by some people. There was a time when we could use whiskey with water, but why revive sad memories? Soap was discovered by a man, whose wife's first name was 'Sofia.'

"There are two kinds of soap, namely, laundry and toilet soap, the former being used in some laundries. Adam and Eve used toilet soap, but had no use whatever for laundry soap.

"Soap is considered very useful while taking a bath; that is, by those who take baths.

"As the old saying is, 'You can lead a Bolshevik to water, but you can't make him take a bath.'

"A by-product of soap is the soapbox orator, the box being the only thing they use.

"One of the principal ingredients of soap is 'lye.' Lye is also another thing used by married men quite frequently for the purpose of misinforming their wives.

"Some people say, 'While there's life, there's hope,' but I say, 'While there's lye there's soap.'

"Soft soap is another article used when you desire a personal favor from someone.

"Cleanliness is next to godliness, so long live soap, at least let us soap so."

Sell hardware! Yes, indeed you may!  
Give satisfaction! Will you! I say;  
For what you sell, and what you give,  
Will make business die, or live!

#### SERVICE

Is it what one gives, or what one receives? Is it what the seller makes through the consummation of a sale, or deed done, or is it the benefit derived by the recipient of the deed? Perhaps it is both.

This cannot be answered without taking into consideration the human element giving thought to the subject.

In other words, is George Jones a sponge, or a radiator? Deciding this you have about solved the problem.

In these times which try the very soul of every thinking person, there is a strong feeling that each one sees but himself and in that self a consuming passion to be a huge magnet.

However, in our saner moments, we are sure that the above is not true but merely appears to be so.

We all seek those things that endure and make for contentment, and but one result can come from such desires, namely: Good to our fellow man.

This is God's law and man has never improved it.

J. O. ERNSBERGER,  
Western Manager Lansing Co.

# China and Glassware Will Win the Women

In the spring a young man's fancy may "lightly turn to thoughts of love," but the thoughts of the housewife turn to the replenishment of her china closet. During the spring and summer there is so much informal entertaining done that dainty china and sparkling crystal become almost a necessity. The hardware store is the logical place to buy it, but unless it is kept clean, light, airy and beautiful, the women folk will pass it up for the more attractive jewelry store or gift shop, even though they have to pay a higher price. It therefore behooves a hardware man to make his store attractive if he wishes to make a success of his high grade lines.

In May and early June come the commencement exercises, which bring in their train innumerable luncheons among the young folks; the June bride, with the showers, lunches, breakfasts and dinner in her honor; and the afternoon and evening parties given by the juveniles for their little friends. Such being the case, it is well to seek the custom of prospective hostesses by offering them a special inducement to visit the store.

For a number of years it has been the custom of the Parmelee-Dohrmann Co., Los Angeles, California, to have a spring showing of special tables set for special occasions, and completely outfitted with china, glass, silver, flowers and decorations. So well known has become this custom that scores of Los Angeles housewives wait until the revue has been staged before laying in their spring stock, well knowing that at this store, at this time, they will find the very latest novelties, and the most attractive line of china and all the other table accessories.

## Special Invitations to Display

To all their patrons the firm sends out special invitations, on good stationery, in regular announcement form, and, in addition—for they wish to attract new trade as well as hold their old customers—they herald the fact through the newspapers.

Among the table settings in the Parmelee-Dohrmann display was this Oriental specialty table.

A wedding table set inside the store will sell the very best of your stock.

Special lectures are given the salesmen, outside of store hours, on the origin of the different designs, the process of manufacture, the appropriateness of each article in combination with others, the durability of the wares—in fact, all the information that might be of use to them in increasing their sales. In this way each salesman is able to assist the buyer in the proper selection of table settings.

When the week for the special showings has been set, the store is appropriately decorated with palms and ferns to give it a festive air, and the formal tables are scattered among others decked out with open stock china, sets of glassware, flower dishes of all descriptions, so that many who come merely to admire the "set" tables and gain ideas for arranging tables of their own, are attracted by the beautiful wares displayed on all sides, and proceed to purchase items needed for the replenishing of their china cabinets.

Having aroused interest by their newspaper announcements, they next make use of their windows to attract attention to their Spring Tables, by installing a fully set luncheon table therein. By it was a card suggesting:

"You can never see the best from the outside looking in."

cordially inviting the passers-by to come in and view the complete table display. The window table this season was set for a wedding breakfast, carried out in pastel tones. The centerpiece was a large silver flower dish filled with tulips, jonquils and fleur de lis. At each corner was a silver candlestick tied with a mass of yellow tulle, and holding a yellow taper. At each plate as a favor was a tiny hat of satin and feathers in one of the pastel tones. The

Here is a dining table set so attractively that it will prove irresistible to the house husband, as well as the housewife.

china was gold encrusted, and the silver plate of heraldic pattern.

### Most Striking Tables Inside

**Children's Party:** Suspended from the ceiling was a gilded hoop, from which dropped a shower of golden ribbons, to the end of each being fastened a red, green, gold or silver egg. The centerpiece was a nest filled with candy eggs, and at each corner of the table was a nest presided over by a white papier mache rabbit. The favors were tiny perambulators of wire, in each being an inch long yellow cotton chick. The china was of floral design in black, white and yellow; and the silver plate of patrician design.

**Formal Springtime Dinner:** The centerpiece was a number of potted lilies rising from a mass of lavender and gold tulle, while all around the border, set in low earthen flower dishes, were purple and gold pansies. Broad bands of floral ribbon extended diagonally across the table, and at each corner were caught by masses of lavender tulle. Four candlesticks of heavily embossed silver held tapers of yellow. The silver was of plate, heraldic design; and the china and glass both gold banded.

**A Handsome Table for a Wedding Feast:** Suspended above the table was a large wedding bell formed of white chrysanthemum paper and lace. Across the table wandered a scarf of pink tulle, and the centerpiece was a silver flower bowl filled with jonquils, pink sweet peas and maidenhair fern. At each corner were candlesticks of gold china, holding pink tapers. In front of each plate was a white tripod, with mass of lilies of the valley and tulle at the top, from which was suspended a little white wedding bell. The place cards were cutouts of a bride. The glassware was gold banded; the silver Sheridan pattern, and the china Dresden.

### Oriental Possibilities

Unique among tables was the one carried out in Chinese design. Suspended above it were two huge Chinese lanterns, lighted. The centerpiece was an elaborate carved shrine of teakwood, in which reposed a gilded statue of Buddha. In front of the shrine was a mirror to represent a lake, surrounded with green foliage in little earthen dishes, and at the end a teakwood arch. At each corner of the table, set in low flower dishes, were sprays of iris. Broad bands of gold and silver brocade were laid at each plate, and the place cards were little Chinese maidens with red crepe paper parasols. The glass was etched laurette; the silver Adam pattern, and the china Canton.

Attached to each table was a typewritten card, on which was listed every item of china, glass, silver and decoration, with the cost of same, together with the total cost of each table, so that each visitor knew exactly how much it would cost to duplicate the settings in whole or in part.

### NEW WHITMAN-BARNES OFFICERS

At the annual stockholders' meeting of The Whitman & Barnes Mfg. Company, held at the general offices in Akron, Ohio, recently, A. D. Armitage was elected president; Messrs. W. H. Eager and A. B. Hall, Akron, Ohio, and W. J. Elliott, St. Catharines, Ontario, Canada, vice presidents; E. A. Fisher, treasurer; W. E. Rowell, secretary, and S. H. Tuttle, assistant secretary, all of Akron, Ohio.

Mr. Elliott of St. Catharines, Ont., is an additional vice president and has heretofore been manager of the St. Catharines factory. He will now have entire charge of the Canadian division of the company's business, selling and manufacturing. Twenty-seven years ago he entered the employment of Whitman & Barnes in a minor position. Advancement to positions of importance and responsibility followed rapidly, when in 1908 he was made manager. His promotion to the official circle of the company is merited recognition of his excellent services and the confidence in which he is held by the corporation.

### ERNST ENTERTAINS EMPLOYEES

Between fifty and sixty employees of the Ernst Hardware Company, at Seattle, Washington, enjoyed the hospitality of President F. A. Ernst last month, on the occasion of the firm's annual dinner and get-together meeting.

The Ernst Hardware Company has become notable in the Northwest for the organization and cooperation that is manifested by the members of its organization. Salesmanship courses have been held by the members of the force and the Company is at all times alert and ready to work with all the members of the organization for better fellowship and better understanding of the hardware business. One of the features of the recent banquet was the announcement by H. H. Bogue, treasurer of the Company, of the first yearly bonus to employees.

Mr. Ernst described the efforts that are being made to have the company's new building one of the most up-to-date hardware plants in the country, including better accommodations for the employees. The *HARDWARE WORLD* is looking forward with keen interest and anticipation to the publishing in a few months of a complete description with photographs of the new store arrangement of the Ernst Hardware Co.

## RIGHT OF BUSINESS MEN TO USE SIDEWALKS FOR LOADING AND UNLOADING MERCHANDISE

(Copyright by Elton J. Buckley)

The question raised by the following letter is the right of business houses to use the streets and sidewalks, chiefly the sidewalks, for loading, unloading and delivering goods. Of course, the universal custom is to use the sidewalks for this purpose, but the right to do so is a different proposition. The writer of the following letter is the secretary of his local business men's association, and asks that the name and address be withheld.

The ——— Business Men's Association desires me to obtain your opinion about a situation which has arisen here. The business streets of this town are very closely built up, and consequently many of the stores have no rear entrance, and are forced to use the front door for taking goods in and shipping them out. They have done this whenever it was necessary and not at any certain hours. The City Council has now passed a law that inasmuch as there had been much complaint from the general public recently as to interfering with traffic, that hereafter business men could only use the sidewalks for unloading or loading goods before 8 o'clock in the morning and between 7 and 7:45 in the evening. At a meeting of our association it was decided that this could not be done, for it would upset the system of every store and be impossible. We have counsel, who is now preparing an opinion, but we should also be grateful for yours, as you are doubtless familiar with the subject.

P. S.—How could the business men stop the going into effect of this rule?

My judgment is that any such ordinance as this is invalid, because it interferes with and practically destroys the vested right which the merchants of any town or city have, to make a reasonable use of the sidewalk for business purposes. Restricting its use to such hours as before 8 A. M. and from 7 to 7:45 P. M. means about destroying the right entirely, because goods have to be handled when the need arises and when men can be gotten to do the work.

The following is a clear statement of the settled law on the subject:

Abutting property owners are entitled to make a reasonable use of the street for the purpose of moving property or merchandise to and from their buildings, though such use may temporarily obstruct the free use of the street by the public, as in the case of the removal of merchandise by tradesmen to and from their stores. Thus, the right of a merchant to place skids temporarily across a sidewalk to remove merchandise from a store has been upheld. But the use for this as for other purposes must be reasonable and must be subordinate to the general rights of the public. Thus, it has been held unreasonable to appropriate half of a much traveled street for alternate hours each day for loading and unloading goods from wagons, or to obstruct the sidewalk by placing skids across it for four or five hours each day. Whether the use in the particular case is reasonable must be determined from the surrounding circumstances.

The above marks the limit of the merchant's right to the use of the sidewalk for business purposes. The following is equally well settled:

Abutting property owners have no right to use any portion of the sidewalk for the deposit or display of merchandise or other articles kept for sale, nor have

they the right to place on the sidewalks showboards placards or other articles. It has been held that the municipality cannot, without legislative authority, grant the privilege of using sidewalks for such purposes.

The law has realized that the average merchant or manufacturer, doing business under the average conditions, couldn't get along without using the sidewalk to some extent, and, therefore, as one case said, it has long been decided that "from the necessity of the case persons may be justified in making particular uses of streets which to a limited extent operate as an obstruction of free passage."

Note, however, that the use of the sidewalk must be reasonable. I have no doubt that some merchants of the above town have been using their sidewalks as auxiliary warehouses, just as somebody does in every town and city. No business house has a legal right to use the sidewalk unless it is strictly and reasonably necessary. Any use which goes beyond that is illegal and can always be stopped.

The correspondent asks how his association can prevent the ordinance from going into effect. By asking for an injunction against the city officials. I have no doubt the injunction will be granted. The court will doubtless take the position that councils can prevent any excessive use of the sidewalks by passing an ordinance making everybody who does it liable to arrest, and that therefore the drastic rule we have been discussing is not necessary.

## "MAXIMS" SLOGANIZED BY "REEGTHE-RHYMER" FOR THE HARDWARE WORLD

You hit the **Nail** on the head when your prices are right.

There's a **Screw** loose somewhere when your customers make only one call.

There is always **Plane** sailing when your stock is up to date.

It may **Tacks** your brain, but keep tabs on your book accounts.

**Hook** up to salable **Staples** and keep your **eyes** open. **Try** to be on the **Level**, and **Square** in all your dealings.

Don't have too many **Links** in your **Chain** of thought — You hadn't **Auto Tire** your brain.

**Hold-Fast** to your convictions, and **Snap** up all salable **Novelties**.

**Lock** up your ideas, when your competitor tries to **Steel** them.

Stop talking too much and **Saw** wood, when you've **Bit** off more than you can chew.

Don't **Crow** over your competitor, but **Bar** him from taking the wind out of your **Sales**.

Give good ad-**Vice** when needed, but don't tell **Awl** you know.

There are people who are not really bad who are yet so provoking that it takes a lot of the vital forces of life to live with them or near them harmoniously.

### APPRECIATES EDITORIAL AND NEWS VALUE

We honestly cannot see how any of the other hardware journals can be compared to the **HARDWARE WORLD**, for there is so little to read in them.

HAROLD S. GEER.

### MEETING GERMAN TOOLS ABROAD

"German tools are cheaper than American tools in foreign markets," says J. R. Miller, on his return from a business trip to Holland, Belgium and Germany. But the stocks are broken, the prices are indefinite, deliveries uncertain, and the quality suspected.

"At first sight, and judging by what one hears, the impression that one would get of German competition is that it would be hard to meet, but it seems to me that on closer examination the situation over there assumes a more cheerful outlook.

"Holland, it is true, is full of German machine tools which had been sent over soon after the ending of the war, in the hopes that good business might be done in the devastated section when they began reconstruction.

"This speculation in German tools was also augmented by the fact that the German mark was very low and the machines could be had comparatively cheap with Dutch money.

#### Hard to Import

"It was found later, however, that it was not such an easy matter to import machines of German origin into the allied countries, and a good many of the owners of the German equipments have been rather disappointed.

"Among the German machine tools there is a lot of junk which a good many people will not buy. Of course machines can be had so cheap that in many instances tools are bought that are not exactly what a client would buy if purchasing new machines.

"It might interest you to know that when it comes to the purchase of German machines that are not in stock we are in a much more favorable position. German deliveries are usually indefinite, and the prices also.

"The prices are subject to many conditions, such as the increased cost of labor and the liability to have to pay future export duties, which the government threatens to levy, and has levied recently. German deliveries are contingent on their being able to obtain certain raw materials that are indispensable, and buying a machine in Germany for future delivery is rather a risky proposition.

#### Orders in Belgium

"During my recent trip to Belgium we received several large orders from a customer who led me to believe at first that there was no chance of our doing business on account of the considerably lower prices he could get in Germany. I was sure that his offers were not bona-fide and on examining the proposal more closely it came out that neither the price nor the delivery were very definite.

"Taking the matter as a whole, business will be considerably reduced because of the large number of German machines that will be offered during the next year or two, but there will always be a certain number of cases where high grade American tools will be purchased, and I am optimistic enough to believe that we will be doing a steady, although smaller, business for some time to come."

Looking on the bright side is commendable—but don't forget that the wise man looks on both sides.

"Mother," asked the Modern Child as she was being put to bed, "what are prayers?" "Prayers, darling, are little messages to God." The Modern Child grew thoughtful. "Oh, I see," she said at last, "and we wait till bedtime to send them, so as to get the night rate."

### LUNCHEON IN SAMPLE ROOM

Now that the term sample room has lost its liquid significance, the enterprising sales department of the Tritch Hardware Co., at Denver, Colorado, has introduced a wholesale sample room as a feature of its sales policy in merchandising in the inter-mountain territory.

In line with its aggressive campaign along with other merchants of Denver to make Denver the jobbing center of the mountain region, the Tritch Hardware Co. aims to entertain all visiting manufacturers' representatives, as well as dealers and buyers in its wholesale display and sample room. During any meeting or convention in Denver all visitors are urged to visit the display and make their headquarters there.

Recently the members of the Denver Jobbers Association were entertained at luncheon right in the room, and the same evening the members of the Denver Purchasing Agents Association were entertained. This is the way the sample room looked when it was ready for the guests.

### ***Three Hotpoint Leaders!***

Twelve years of aggressive national advertising has built up a consumer demand for Hotpoint appliances that is taxing our manufacturing facilities to the limit.

And this year there is no let-up in that advertising!

Every month full-page advertisements in color are appearing in both the *Ladies' Home Journal* and *The Saturday Evening Post*. This picture heads a strong two-color page in the June 12th *Post*.

### **Hotpoint Turnover Is Quick Turnover!**

Hotpoint appliances are quick movers! In the dealer's back door and out the front, only stopping to ring the cash register. No loitering on the shelves.

Keep your Hotpoint stock complete! Keep in touch with your jobber.

## LAWN MOWER MAN OF MANY MISSIONS

W. P. M. BRAUN, President

Philanthropist, church man, student of music and manufacturer of coffee mills, meat choppers and lawn mowers—surely this seems an unusual and strange combination, and under ordinary circumstances we presume that the man who combines all these activities would either be master of none or he would be somewhat of a superman.

W. P. M. Braun of Philadelphia we have in mind as the able and balanced disposition, who plays all these parts in his life drama. He is president of the Pennsylvania Lawn Mower Works, successor to John Braun & Sons. He is also an officer of the John Braun Company, established in 1888 and manufacturers of C-O-L-E-S Electric Coffee Mills and Meat Choppers. Unofficially he is president of one of the largest orphanages in Philadelphia and he is also a director of a great sanatorium, where treatment for tuberculosis is offered free to the needy. These two are only samples of his many and liberal charities.

The history of the Braun family is closely interwoven with the history of the Lawn Mower. Although lawns date back through the time of Shakespeare to the time of the ancient Greeks, they were never "mowed" before the late 60's in the United States. As far as we know, the history of the lawn mower has not been written. At least it is not at hand, but we know of no more authoritative source for this material, nor who could supply better side-lights, than the Braun family.

John M. Braun and Sons were organized in 1877. Ten years before that, young John Braun had started in the lawn mower business as an employe of one of the old houses in Philadelphia. As John Braun & Sons developed they first introduced the scythe wheel. With this device the edges of a lawn can be cut. In 1916 the company was reorganized as the Pennsylvania Lawn Mower Works, as it exists today.

It was about the time of the reorganization that J. S. Bonbright became the genial, enterprising and widely famous vice president and sales manager of the company. Mr. Bonbright spent his 20 years of apprenticeship in the lawn mower business with the Supplee Hardware Company, and it was there that Pennsylvania Lawn Mowers were developed.

In fact, Pennsylvania Lawn Mowers and Mr. Bonbright affiliated themselves with John Braun & Sons

J. S. BONBRIGHT, Vice President and Sales Manager

and blossomed into the Pennsylvania Lawn Mower Company at just about the same time. For 25 years Mr. Bonbright has been the principal force which has pushed the Pennsylvania Lawn Mower all over the United States and surely there is less grass growing under his feet now than ever before. Or perhaps we may say that under his guidance the mowers have never cut a wider or cleaner swath. Foreign exports have grown until there is an extensive market in Europe and Honolulu. It is said to be the only lawn mower that successfully cuts Bermuda grass.

The present difficulties in manufacture have not excepted the Pennsylvania Company, for no new orders have been accepted with definite price or shipping date since last September.

Says Mr. Braun regarding manufacturing conditions of the present day, "The manufacturer and the product today seem to depend entirely on the whims of the worker. Perhaps it is the labor or the mechanics in our factory. It may be the artisan in the steel mill or where our raw material originates. Again it is the railroad man between the raw material and the producer or between the producer and the consumer. All along the line, the product and the producer can hardly call his soul his own, before the whim of the employe and the worker.

"It is generally accepted that the present day manufacturer is getting 60 per cent efficiency from his investment in labor. Our friends and competitors are trying to meet the problems, and so are we. Neither the employer or the employe knows what the end will be. Meanwhile we must go on making as many of the best lawn mowers as we can and keeping ever alive to the changing situation."

As a purchaser and storekeeper for an engineering company, where we carry about fifty thousand dollars worth of hardware and plumbers' supplies, which we purchase from jobbers and manufacturers, the **HARDWARE WORLD** is very helpful in my work, aside from being most amusing and entertaining to read.

New York.

WILLIAM J. BROWN, Storekeeper.

### Backed by the Biggest Force in Business

—good advertising! Advertisements, handsomely illustrated with actual photos of washing machines, electrical fans, ironers, etc., tell the Benjamin Two-Way Plug story this year.

The same successful methods which made 1919 the largest year of all for Benjamin dealers, are being employed in a greater way in 1920. The dominating magazines in America have been harnessed to our campaign. Every detail has been planned carefully and is being carried out to increase your Benjamin No. 92 Two-Way Plug sales.

This institution is also co-operating heartily with others to spread the "Do It Electrically" educational movement now sweeping the country. For electricity has become an important aid to the civilization of the world.

It will pay you to tie up to this campaign to increase the use of electricity. While doing so remember that any efforts you place behind the Benjamin Two-Way Plug will help create sales for many other electrical appliances. Order from your electrical jobber.

## RETAILER WHO WAS A VICTIM OF A WELL-KNOWN LEGAL PRINCIPLE

(Copyright by Elton J. Buckley)

Somebody sends me a country newspaper from a New Jersey town. It contains an item of local court news which enables me to say something which will—if it is remembered and observed—save somebody some trouble.

The item referred to reported the trying of a case against a retail druggist by the holder of certain promissory notes which the druggist had signed. I reproduce the gist of it:

A suit to recover on two promissory notes of \$150 each was heard in the Common Pleas Court on Wednesday, by Judge Wells and a jury. The action was brought against John H. Cameron, a Burlington druggist.

The evidence showed that in June, 1917, a representative of the Partin Manufacturing Co., of Chicago, made a contract with Mr. Cameron to furnish the prizes, literature, placards, etc., for a voting contest to decide who was the most popular girl in Burlington. Customers making purchases at Cameron's store were entitled to nominate and vote for candidates. The number of votes was to be determined by the amount of the customer's purchase. The scheme was said to be a fine method of increasing a merchant's business.

In payment of the prizes, literature and conduct of the contest, Mr. Cameron signed six notes of \$150 each. The Partin Co. was to furnish a satisfactory bond to guarantee that it would fulfill its part of the agreement.

Before the prizes had been received or the contest put into operation, Mr. Cameron learned that the scheme was not conducted on the level; that some contestants were announced by the company, as the contest progressed, to have received thousands of votes which they did not receive, the purpose being to keep five or six candidates neck to neck in the race, in order to create public enthusiasm and renewed efforts by contestants to solicit votes.

When the fraudulent nature of the contest came to Mr. Cameron's attention, he refused to become a party to it and notified the company that there would be no contest at his store. He did not receive the prizes from the company, and the bond sent to him was not satisfactory, as the Ohio bonding company issuing it was not authorized to do business in New Jersey.

Two of the notes given by Mr. Cameron were assigned by the Partin Co. to Desbress, Bridges & Noel, also of Chicago, in part payment of prizes bought from the latter concern. The notes were not paid and were protested, after which the Desbress firm assigned them to one of their employees, Franklin W. Dean, with instructions to bring suit against Cameron. The testimony showed that the firm did not desire to appear in law suits of this character, for fear of injuring its business, so had such suits instituted in Dean's name.

A deposition of a Government employe stated that warnings had been issued that the Partin Co. was using the mails for illegitimate purposes.

The fact that the notes had been transferred to and accepted by the Desbress Co. in an apparently legitimate transaction, made them, under the law, immune from attack.

By direction of the court the jury returned a verdict for the amount of the notes, with interest, totaling \$340.25, in favor of the plaintiff.

A splendid illustration of the workings of the well-settled legal principle that when A makes a promissory note to B and B transfers it in a bona fide way to C, C can collect it in a suit against A, no matter how complete A's defense would have been against B had B sued on the note. In other words, defenses which would

have been good between the original parties to a note, cannot be raised against a third party holder for value without knowledge of the defense.

Consider what a very great hardship this rule worked upon the druggist who was its victim in the above case. He was induced to sign a number of notes by a concern proved to have been an absolute fake—the Post Office Department had publicly denounced it as a fraud. The scheme which it sold was also a fake, the "security" it offered was phony, and the whole proposition was shown up as a deliberate effort to get a responsible merchant's name to some negotiable paper, for the purpose of indorsing it over to a third party and realizing upon it.

All this was proven at the trial, and I have no doubt that the druggist's counsel argued strongly that the transfer of the notes from the fake concern that got them originally to the "third party" who sued on them, was merely another part of the fraud, done in order to take advantage of the legal principle we are discussing.

Yet in spite of all this the judge ordered the jury to render a verdict in favor of the plaintiff for the full amount of the notes. To quote from the report: "The fact that the notes had been transferred to and accepted by the Desbress Co. in an apparently legitimate transaction, made them, under the law, immune from attack."

Every business man should plant this legal principle in his mind so firmly that it will rise to the surface and confront him whenever he is asked, or whenever it occurs to him to sign a promissory note. What should this druggist have done to protect himself? He should have refused to sign the notes or anything that could be tortured into a note. If he was responsible, and the concern endeavoring to sell him was honest, and believed in its goods, it would have been glad to sell him without the notes.

I have seen this rule of law work apparently the most outrageous injustices. In one case A sold B a horse and warranted it sound in wind and limb. B gave his promissory note in payment before the horse was delivered. A indorsed the note to C as soon as he received it. On the way to B's place the horse died, which of course meant that A had no claim against B at all, and if A tried to collect on the note, he would have been laughed out of court. But C collected on the note without difficulty, under the legal rule which is the subject of this article. To be sure, B could sue A to get back the money he had to pay C on the note, and that was done, but A had nothing and B was out both money and the horse.

I don't know anything in the way of a legal document which can make as much trouble for its maker as an ordinary promissory note. Be exceedingly careful how and why and when you sign one.

# A BUMP-A BOUND-THEN SAFE EASY SPRING REBOUND

Quality which has for years symbolized the finest excellence has now taken an even greater value by adoption of specially built shaping and tempering machines in the manufacture of Higgins Quality Replacement Springs for automotive employment.

Assuring greater strength—better resiliency—longer life and service than ever before.

There is a Higgins Spring made to meet the most exacting requirements of practically every make and size of motor vehicle and to do it in the most economical manner.

The soundness of our sales policy should appeal to everyone interested in buying or selling replacement springs. Distribution through the Jobber assures service and sales—co-operation of proven value. Big stocks of Higgins Springs at important points of distribution offer convenience and promptness of shipments so essential to economical and wholly satisfactory selling.

Jobbers and Dealers will find many splendid benefits in the clean cut policy of selling. Write for particulars and catalog. Don't fail to ask for a little book of big information, entitled, "Why Higgins Quality Springs Are Better."

**HIGGINS SPRING & AXLE CO., Dept. 541, Racine, Wis.**

NO HOLE-NO BOLT-NO HUMP-NO JOLT

## WATCH AND LEARN FROM THE OTHER FELLOW

"Instead of finding fault with the man who is beating you at your own game, study his methods, and perhaps you will learn something."

One of the foremost mail order advertising men of the country is quoted as explaining to an audience of his hearers that the company for which he works has in its employ a number of people organized regularly into a bureau for the purpose of reading and critically examining every week the country newspapers which come out once a week all over the country.

The people of this bureau are trained to interpret the progressiveness of a community by means of its newspapers and especially the advertising which they contain. When it is found that the merchants of a certain locality are using very little publicity to bring them business, it is a short matter to look up the records of that community or state or county as the case may be, for such facts are readily available.

In many cases it only takes a short time to prove that there is plenty of money in that part of the country, but that no one is going after it very strong. The bureau reports in detail on this situation, and immediately that section is flooded with the mail order literature of that house.

The people who receive this literature seem to be actually hungry for it, and the results in the way of business it brings are surprisingly good and so much in excess of the same effort and expense put forth in territory where the local merchants are generous advertisers that the Mail Order Newspaper Reading Bureau is considered a grand success.

Now some of those small town dealers promptly become offended when the people whom they consider their legitimate customers send their money out of town to buy the very lines of goods which they, the small town merchants, carry, and some of them do a good deal of grumbling and point to the ingratitude and unreasonableness of the people with whom they have to deal.

Now, if your house were burning up, it would be a very stupid and silly performance to mount a soap box and to offer a homily on the destructiveness of fire when it gets the upper hand. The only thing to do is to fight that fire without wasting time for words. In fact, the same strength expended in carrying water as in inveigling against fire prevention, would usually put out the flames.

In the same way, the small town merchant would be much wiser to stop talking about the greediness of the mail order houses and to promote his own business by the very means which bring patronage to the distant concern. Advertising pays. It brings business. It keeps out competition. And it proves to people that you have something to offer them as good or better than anyone else.

There are some merchants who are inclined to favor lines of goods not nationally advertised, on the ground that new or little known brands can be bought much more cheaply many times than those affording a larger profit. This is true in many instances, but figures must be examined closely if they are to tell all of the facts.

### There Are Similar Cases in Your Own Line

Not long since, two men representing different kinds of liniment approached a druggist. The one representing a liniment in an attractive package, but entirely unknown to the public, offered his goods at a price to permit a gross profit of 33 per cent. This looked good to the druggist, and he took the matter under advisement.

The second liniment man was representing a liniment which had been on the market for years, and the name of which was almost a household word. His goods could be sold at a gross profit of 25 per cent.

To the casual observer it would seem as though the first proposition were the better one, but the merchant reasoned along these lines:

"If I buy the unknown goods, I must create a demand for them by doing a good deal of advertising myself, which will cut down my profit. I will have to work hard behind the counter to sell those goods, and the chances are my clerks will not take hold of them very enthusiastically. If I succeed in selling \$150 worth of that liniment this year, I will do well. My profit will be \$50, and out of that will come my extra expense of time and publicity in selling.

"On the other hand, if I stock up with the nationally advertised goods and do a business of \$500 in liniment this coming year, I will make 25 per cent clean, and it is much surer at that than my sales on the other goods. One quarter of \$500 would be \$125, and there will be no chance of my being left with a lot of dead stock on my hands at that."

So, all in all, publicity pays. It pays us and particularly if we are wise enough to cash in on what is being done by the other fellow, either by using it, or by taking advantage of the methods which have brought him success.

---

## THRIFT

It is a common mistake to suppose that thrift means only saving money. Thrift means spending money intelligently as well as saving it. Thrift simply means that you know what you are doing, how much you are spending, what you have spent and what you are going to spend. Every person ought to keep strict account of his income and outgo. It is a matter of habit. When you get used to it, it is as easy as shiftlessness. Thrift is the road to contentment.

## CAR COMFORTS WHICH SELL RAPIDLY

### *Stanwood Products*

Here are several little accessories that add greatly to the comfort, convenience and satisfaction of the driver whose car is equipped with them.

**STANWOOD SAFETY STEP PLATES** are indispensable as safety devices—prevent slipping when entering and leaving the car. They also protect the covering on the running board.

Step Plates are subjected to rough treatment, and should be built to stand it. Stanwood Plates consist of rubber covered sheet steel bases, from which solid rubber longitudinal ribs project. They always look well and do not discolor and mat down. They outlast any other step plate on the market.

Stanwood Safety Step Plates are manufactured in a variety of styles, and are priced to meet the requirements of any car owner. Type A, \$3.70; B, \$2.65; C, \$1.60; Ford Type, \$1.60, List.

**STANWOOD ACCELERATOR HEEL PLATE** furnishes a stable position for the heel when operating the clutch and brake. It prevents wearing hole in floor covering of car. It is built like Stanwood Safety Step Plates. Price, each, \$.85, List.

**STANWOOD PEDAL PLATE** is used when the accelerator is not placed near enough to the clutch and brake to use the Heel Plate. It is constructed same as Stanwood Safety Step Plates. Price, each, \$.50, List.

**STANWOOD CONFORMABLE HAND PADS** add a pleasing appearance to a car. They prevent finger marks and wear on finish of car. Made of leather in various grains. Price, each, \$.90 to \$1.80, List.

**STANWOOD ADJUSTABLE ACCELERATOR FOOT REST** sells at sight. The user receives lots of comfort from this device—relieves leg muscle tension, acting as a foot support. It can be adjusted to the position of any driver. It is a reliable safety device, preventing unintentional acceleration over rough roads, crossings. Price, each, \$1.60, List.

**STANWOOD EQUIPMENT CO.**

308 N. Michigan Blvd., Chicago

request

## WHERE A PARTNER'S RIGHT TO BIND HIS FELLOW PARTNERS STOPS

(Copyright by Elton J. Buckley)

Illinois.

Besides owning the store property in which we do business, I own another in this town which I rent to a firm doing a sizeable business in farm machinery, farm implements, large hardware, etc. A year ago I made a very good lease on this property, renting it for five years at very profitable rent, as it was the only place in town suitable for the business.

The firm which came in as tenant has two partners, the real manager of the business and his father-in-law, who lives in another city and he has no part in running the business. The firm name includes both of their names, but the father-in-law has most of the money in it and the son-in-law runs the place. It was the son-in-law that signed the lease; all our business was done with him, the other man never came near the place.

The son-in-law paid several months' rent with his regular store check, but has gone behind lately and everybody is expecting that he will close up shortly, as he don't attend to business and it is running back. I am wondering where I come out on my five-year lease, which still has around four years to run. The father-in-law has plenty of money and could stand for the lease, but the son-in-law has nothing and a judgment against him would not be worth 10 per cent. I consider I could not rent the place again at such a figure, and I will lose some money unless I can hold the father-in-law. I will say that the lease reads at the bottom: "Stone and Welch, by R. B. Stone (the son-in-law). Does the fact that Welch did not sign the lease make any difference, as I have always understood that one partner could act for another?"

If you write this case up, don't give names.

R. B. R.

This seems a good time to say a word about a certain limitation on the general power of a member of a partnership to bind his fellow members. As I have occasionally explained, there are very few limitations upon that power. The whole theory of partnership is based on the idea of agency—one partner is the agent of the other, and what he does will in most cases bind them. Discard the old idea that it is the sharing in the profits that makes a man a partner. Plenty of men share in profits who are not partners at all. Whether there is a sharing in the profits is always considered when determining whether a man is a partner, but the main consideration is whether he has power to bind the other members of the firm. If he has, he will usually be held to be a partner.

### Sealed Instruments

There are a few limitations upon the power of a partner to bind the fellow members of the firm, and one of the chief ones is brought up by the above letter, i. e., as to sealed instruments. A sealed instrument is one under seal, in other words, any lease, or deed, or order, or contract, which has a design like this— to the right of the blank lines where the parties sign. Any design answers the purpose. A document with such a sign in it, or even with only the word "Seal" there, is a sealed instrument and is subject to a law of its own, as compared with documents signed without that. A lease is a sealed instrument.

A partner cannot sign any sealed instrument which will bind his fellow partners, unless they consent to his doing it, or unless, after knowing it, they affirm it. There have been many cases where sealed contracts are made by one partner not financially responsible, but on behalf of the firm, and where the member who had the money didn't sign; or where it could not be proven that he knew about it. In every such case the courts have held that as the instrument was under seal, it did not bind the partner not signing and not knowing. The other man in the deal was therefore left with a scrap of paper binding one irresponsible person.

In one of these cases the court said this:

The statement of claim sets forth a lease in writing under seal between the plaintiff as lessor and Faggen Bros., Solomon Faggen and Henry Faggen, lessees. The liability of the lessees named is not denied, but the plaintiff seeks to recover a judgment against the legal representative of Joseph L. Greenwald on the ground that he was a member of the firm of Faggen Bros. at the time the lease was executed. The attempt is therefore to charge him personally in an action on a writing under seal to which he was not a subscribing party. The right to recover is based on the written agreement. It is conceded by the learned counsel for the appellant that one partner cannot bind another by a sealed instrument, and many authorities compel this concession. The implied authority arising out of the relationship to bind each other is limited to ordinary dealings within the scope of the business of the partnerships, but contracts under seal relating to future actions are out of the usual course of business and are not recognized as binding on non-assenting partners. Assuming that a partnership existed, it was necessary for the plaintiff to show that Greenwald assented to the execution of the lease before it was signed, or that he ratified it afterwards.

The case above reported was one precisely like that which R. B. R. writes about—the only partner signing was the impecunious one. Unless R. B. R. can show that the father-in-law knew about the lease—I mean had a clear knowledge of all its terms (not simply knew there was a lease), he will be bound by the rule of law I have explained.

The best way to make a sealed contract with a partnership is to have every member sign it. Don't accept the word of one that the others know; they may say they did not. Get all their names.

P. C. Patterson, for 12 years Spokane manager of W. P. Fuller & Co., has been promoted to the management of the Portland branch, giving him a much larger field of operation. He ranks among the pioneers of the organization, his service covering 23 years. Clayton W. Moore will be the manager of the Spokane branch.

John W. Simes, who is in charge of the interests of the John H. Graham & Co., in Christchurch, New Zealand, recently made a visit at route to headquarters of John H. Graham & Co., No. 113 Chambers St., New York City.

## YAKIMA COMPANY ADDS ACCESSORIES

The Yakima Hardware Company, at Yakima, Washington, are adding automobile accessories to the wholesale stock, just as soon as the new warehouse is constructed to house the wholesale department. The demands of the trade as well as the development and growth of the Company's organization make new addition inevitable.

The following statement by President W. A. Bell of the Company, is self explanatory: "Our jobbing business has outgrown facilities we have for handling it, and we have decided to separate the wholesale and retail departments, building a new store for the wholesale department. The building will be 50 by 140 feet, with full basement and two stories. When the new building is completed, we will add automobile accessories to our stock and will be prepared to supply the needs of the trade in our territory. Work on the new building will begin at once."

As an indication of the rapid growth of the wholesale business of the Company, Mr. Bell points out that beginning in a modest way seven years ago, the Company now has four men on the road covering all of the Yakima Valley, with a resident salesman in Walla Walla covering that territory. Two more men will shortly be put on the road, one to sell automobile accessories.

A score of persons are now employed in the jobbing department. This force will all be moved into the new building when it is completed. The company is now publishing a general hardware catalogue and will put out a catalogue of automobile accessories when the new stock is ready. The jobbing business of the Company last year reached a total of over \$750,000, and is expected to reach the \$1,000,000 mark this year.

After the separation of the wholesale and retail departments, R. C. Sinclair and George Rankin, Jr., will have charge of the retail department and Mr. Bell will give his time exclusively to building up the jobbing trade. He expects to make Yakima the center for hardware jobbing for all of the Central Washington territory.

## ARCHER &amp; WIGGINS WHOLESALE ONLY

Announcement has been made to the trade by Archer & Wiggins Co., Portland, Oregon, that their automobile accessory distributing business will henceforth be conducted on a wholesale only basis.

W. B. Higgins, vice president of the company, has recently been instrumental in purchasing a quarter block of land, where the construction of a new building has already commenced. The business will probably be moved into the new building about June 1, and with the increased facilities, Archer & Wiggins will be better situated to cooperate with the merchants of auto accessories and supplies in the Northwest territory.

TO THINK OR NOT TO THINK  
IS NOW THE QUESTION

Think well before you leap,  
For 'tis best to keep  
Your good intentions before the public eye.  
Don't think too well of riches,  
That come with many hitches,  
As the years roll by.

A man with wit and brain,  
And past without a stain,  
Is much the better off;  
Than he who hoards his wealth,  
Obtained by greed and stealth,  
And holds himself aloft.

Deep thinking now's the fad,  
The idea is not bad—  
Because of mental action  
You reason with each problem,  
And work with brain to solve them—  
To your own satisfaction.

REEGTHERRYMER.

Albert Duncan has purchased the hardware stock formerly owned by K. L. Molen, at Arco, Idaho.

## TYPICAL BOOTH AT THE ACCESSORY SHOW

The first strictly automobile accessory exhibition ever held west of Chicago, was held at San Francisco the first week in April, whereas the accessory manufacturers and distributors have always had faith in the balcony at automobile shows, there has never before been a special exhibition or show just for accessories and the accessory trade.

The success of the recent show is definite evidence that from now on the western accessory exhibition will be an established fact and will occur regularly.

Typical of the interesting and enterprising displays at the show, we reproduce the exhibit of the Norman Cowan Company, western representatives for a number of the most important and prominent of the accessory manufacturers. This enterprising organization had three spaces for its display and, as is evident in the photograph, did full justice to all of their principals. The bumpers and fenders of the L. P. Halladay Co. are shown on a rack at the right. "X" radiator liquid from the "X" Laboratories was displayed on a table in the center. Some of the other prominent automobile accessory manufacturers represented in the West by the Norman Cowen Company are Swan & Finch Company of New York, Graham-Davis Company of Boston, N. A. Petry Company of Philadelphia, and A. S. Campbell Company of Boston.

# Do your Brakes Obey Orders?

## RUSCO Brake Lining and Clutch Facings

**W**ILL the brake that you are relining today obey orders in the user's service a year hence? If lined with RUSCO, it will.

Rusco has a gripping power that's guaranteed for one year. The number of motorists who reline with Rusco is growing by leaps and bounds.

Our valuable book on all Rusco Webbing Products will be sent at your order.

### THE BUSINESS MAN'S HEALTH

Without good health, a business man is seriously handicapped in the race for success and in the meeting of the keen competition which he must face.

Without good health, the mind is not clear, the senses alert, or the body agreeably active. It takes part of the energy of living to force one's self on to the point of doing what ought to be done and so the vital power available for actual progress is substantially lessened. Many rules have been laid down for maintaining good health. The business man is advised that, "It is work that kills," and he is given a system of living which includes diet, baths, exercise, regular habits, and a wise mixture of work and play.

All this is reasonable and the suggestions should be heeded in so far as they suit the individual case. But all too often some malady or insidious disease gets a firm foothold before its presence is suspected. Perhaps for a long, long time the business man has been feeling below par, without having much idea as to the reasons. He is not sick enough to call in the services of a physician, and yet feels no marked zest for business and its many requirements, most of which are exacting in the extreme.

The sensible thing for any man to do is to have himself thoroughly examined every six months with the painstaking thoroughness that is required for a life insurance examination. He will then discover whether he is in prime condition or just on the edge of some disease. Sufficient laboratory tests and examinations should be made that there will be no doubt as to his exact physical status. If there is any disease it will be detected while it is in its earliest stages. And if there is none he will know that he can and should go on with pep and punch.

The business man should see to his teeth, once in six months also, for many cases of depleted nerves and many a condition of toxic poisoning results from diseased teeth. One man estimated that his neglect of his teeth had cost him, at least, \$500,000 and he had saved bills in all probability of \$50 or \$75. This left a large balance on the side, of what good health might have meant to him, besides the discomfort he suffered.

All in all, it is not a wise thing to take too much for granted or to drift. The two largest assets any man has are his time and his health. Be careful of these. Use them right and there will be no question but what he can and should keep in good physical condition, barring accidents. Safety first will eliminate the chance of a good many accidents, and an accident insurance in a reliable company may prove a sheet anchor, in time of emergency. Don't take too much for granted, and don't make the mistake of thinking that nothing can happen to you. In time of peace prepare for war!

### STANWOOD COMPANY MOVES

The growth of its business has meant for the Stanwood Equipment its outgrowth of its old quarters. On April 1st the well known Chicago manufacturers of automobile accessories and equipment moves into new and enlarged quarters at 308 North Michigan Blvd., Chicago. Here they will be able to receive and handle the trade in a manner appropriate to the importance and demand upon their products.

The Oregon Hardware & Implement Company has just purchased the Bolton-Bodmer Co. at La Grande, Oregon.

Rearrangements to better their facilities for handling the trade are being made by the Jones-McCord Hardware Company at Baker City, Oregon.

Robert E. Sheldon has acquired one-third interest in the Samson Hardware Co., Inc., at Fairbanks, Alaska, having purchased the part formerly owned by Mrs. Cora N. Hamilton.

C. E. Robertson has acquired the interest of Geo. E. and J. L. Payne in the hardware firm of Ivie, Payne & Son at Sheridan, Oregon, and now the firm will be known as Ivie & Robertson.

C. Weiskopf has purchased the retail hardware department of the former business of Edward Hart, at Gallup, New Mexico. The direct purchase was made from the Chas. Ilfield Company.

With the recent retirement of C. C. Reynolds and I. B. Newton from the hardware and sporting goods firm of the Harper & Reynolds Company of Los Angeles, California, the business has been reorganized under the title of the Harper & Reynolds Corp. Mr. Reynolds will put all his time into the management of his ranch in the San Fernando Valley. Mr. Newton has been appointed as a director of the Federal Reserve Bank.

### SELF-DEMONSTRATING DISPLAY STAND

A counter display stand which invites each waiting customer in the accessories department to self-demonstrate the Red Spot Double Duty Searchlight, has just been sent out to the trade by the manufacturers, the F. W. Wakefield Brass Company of Vermillion, Ohio.

The self-demonstrator consists of a substantial metal standard, felt padded to absolutely prevent injury to the show case, upon which two Red Spots may be mounted, with lamps connected to a battery under the counter. Waiting customers, responding to the invitation to "Try it," touch the button and the color changes—white for driving and red for emergency.

Good nature makes the grouchy patron feel like kicking himself across the street, or like taking out a dog license with growling permit attached.

**E**IGHT AC Spark Plugs fired the engine of the Peerless that broke the stock car record for the arduous run between San Francisco and Los Angeles, functioning perfectly during nine hours and twenty minutes of punishing road speed, desert fighting and mountain climbing.

What these eight AC Spark Plugs did in the engine of the Peerless, eight other AC Spark Plugs, or eighty, or eight hundred, or eight thousand will do.

They will prove unfailingly dependable no matter in what make of car they are used or what service is demanded of them. That's why it pays to sell AC Spark Plugs as well as to use them.

Champion Ignition Company, FLINT, Michigan

These manufacturers use AC Spark Plugs for factory equipment

## A TYPICAL CASE OF BUYER'S GOUGE

(Copyright by Elton J. Buckley)

Every once in a while I like to write something about the law as to when—in a sale of merchandise—the title passes to the buyer. Many things involving important rights of both seller and buyer, depend on that, and it is therefore well to keep the subject before business men more or less constantly.

I have had submitted to me during the week a case which enables me to say something which I trust will be interesting upon this subject:

Lincoln, Neb.

On May 19, 1919, we sold a shipment of goods to a customer in Nucla, Col., amounting to \$69.25. The goods were sold f. o. b. our store, but we allowed freight to Placerville, Col., though on the billhead was a statement that "Not paying bills on or before due date forfeits your freight allowance." The allowance of freight was merely a concession and did not, as we understood it, mean that we were selling the goods delivered to the buyer. We certainly did not intend to do so.

On July 2, 1919, we received word from the customer that the shipment was destroyed in a fire in the D. & R. G. Railroad warehouse at Placerville. The customer asked for the bill of lading so he could make his claim against the railroad, and we offered to make the claim for him in Lincoln so as to get a quicker settlement, but he preferred to do it himself and he did so.

On August 8th we received a letter from him stating that his attorney had advised him that probably the railroad was not responsible, but that the transfer company, which should have called for the shipment at Placerville and taken it to Nucla, was responsible. I need not go into the merits of this, because it does not concern us. In this letter the customer said, "Just as soon as we find out who is to settle for these brooms we will remit to you."

Since that time we have continued to demand payment for the goods without result. On August 17th, the customer wrote he had put it up to five jobbers (all of whom had shipped him some goods which were lost in the same fire) to share part of the loss, and he wanted us to share one-third from our claim as our share of the loss. The transfer company would pay another share. We declined. After much correspondence the customer on January 18, 1920, writes: "This fire was no fault of ours, \* \* \* so if you can't see your way clear to stand one-third of this loss, then start the ball rolling, in order to determine who has got to lose the fire loss on this particular shipment. We will just test out the law and see whether we will have to pay for anything that we don't get."

Our question is, where do we stand in this? Have we got to wait until the customer squabbles the matter out between the railroad company and the transfer company? Had we better take two-thirds of our claim and settle? Why should we lose any of this claim?

LEE B. &amp; D. CO.

This is merely a bare-faced gouge, but there are many cases like it.

Jobbers and manufacturers seldom have a harder job than to convince a buyer, when goods reach him damaged or do not reach him at all, that he, the buyer, should pay for them anyway. The average buyer simply can't—or won't—get it into his head that in the usual transaction the goods belonged to him from the minute they were delivered to the railroad, that if anything happened to them after that it was the buyer's business, and that the seller had just as good a claim for his money as if the

goods had reached their destination in perfect condition.

The case submitted is precisely that kind. The goods were sold f. o. b. the seller's store. The seller followed the usual custom of delivering them to the railroad. As an extra concession he allowed the freight part way, but that doesn't change the fact that the sale was made f. o. b. the seller's store and not made delivered. Upon delivery to the railroad, title passed to the customer, after that the goods were his, and the loss of the fire was on him. It was no more on the seller than if the fire had destroyed the goods after they reached the buyer's store. The buyer is clearly responsible for the whole bill, and the fact that he "never got" the goods is no defense at all. Nor is the fact that the fire wasn't his fault. If this correspondent will enter suit against his customer he will get judgment without a doubt, not only for the full amount of the claim, but for interest and costs.

So much for the law. Now just a word on the morals of this situation. It will be just as applicable to a thousand other cases as it will be to this. A man ought not to be permitted to get away with a thing like this, for I regard it as tantamount to dishonesty. The oftener a merchant is allowed to succeed with such a thing the more unscrupulous he becomes. Even for his sake it ought not to be allowed. The victim of such a situation especially where the amount is small, as in this case, and particularly where there has been long drawn out and tiresome controversy, is apt to say, "Oh, give it to him and close it up!" He should look at such things from the standpoint of business principle. Even from the money standpoint, however, he can usually prosecute his claim, and even after paying counsel fee, have as much left—often more—than the sum he is asked to accept by what I consider a dishonest compromise.

## HANDLES COLEMAN LAMP ADVERTISING

Karl E. Kilby recently has been appointed manager of advertising for the Coleman Lamp Company of Wichita, Kansas. Mr. Kilby conducted the Karl E. Kilby Advertising Company in Wichita from 1913 to 1916. During that time, he prepared and placed the first national advertising campaign undertaken by the Coleman Lamp Company.

He was later connected with the Street Railways Advertising Company of New York and Chicago, and the Atlas Auto Supply Co. of Chicago, but after June 1, 1918, has been in Y. M. C. A. service and overseas until August of this year. In that capacity he joined the 302nd ammunition train of the 77th division at Fere-en-Tardenois in the midst of the Marne-Aisne offensive and was with them until they sailed for home last April. In the summer of 1919 he was assigned to the 5th brigade of marines at Brest, and returned to the States in August.

One of the features of the automobile accessory activity of the Vickerman Hardware Company at Newport, Washington, is the installation of a handy curb free air service for their patrons.

**D**IAMOND TIRES are the hardware dealer's most successful merchandised tires, because Diamond Tires are high quality tires—and the trade appreciates them. Diamond salesmen co-operate very closely with hardware dealers—and the hardware dealers know it. Diamond Tires are nationally advertised—and dealers cash in on it. Furthermore, Diamonds are giving such extra big mileage and splendid service that you have no trouble selling them and no trouble after they are sold.

## Tell him if he needs new brake lining

**Y**OU can sit down and wait for business to drift in or you can go out and get it.

One of the surest ways of selling brake lining is to show that it is needed. When one of your customers needs new lining, tell him so. You're an expert—point out the condition of his brakes.

And sell him Johns-Manville Non-Burn Asbestos Brake Lining, the lining that makes satisfied customers because it is dependable.

Johns-Manville Non-Burn Asbestos Brake Lining comes to you under a protective sales policy that safeguards your profits. You don't have to carry an enormous stock because you can be sure of getting Johns-Manville Non-Burn Asbestos Brake Lining whenever you need it.

The nearest Johns-Manville branch will tell you who distributes Johns-Manville Non-Burn Asbestos Brake Lining in your vicinity.

Or see your distributor and ask him about the opportunities for you in handling this profitable Johns-Manville product.

# JOHNS - AUTOMOTIVE

### Johns-Manville Speedometer for the new Fords

With these speedometers in stock you can profitably meet the demands of the man who wants a good speedometer for his new Ford.

The instrument is simple, sturdy and easily attached.

Also models for Fords not equipped with starters.

### Johns-Manville Hub Odometer

There is an increasing demand for an accurate but inexpensive mileage recorder that can be attached to business cars and trucks. This instrument will enable you to meet the demand—at an excellent profit.

### Johns-Manville Automobile Tape

Here's a tape so good that we guarantee it. Johns-Manville Tape will make satisfied customers for you.

### Johns-Manville Automotive Mogul Packing

For water pumps and similar places, where a small packing is required, Mogul Packing makes a tight job. Besides stopping the leaks, it is a natural lubricant. Keep Mogul Packing on hand, there are lots of uses for it. Also Johns-Manville Seigelite and Service Automotive Sheet Packings.

Many dealers are keeping records of their brake lining sales and renewals. They find it pays to periodically remind customers that their brakes need new lining.

Why not try this on your trade?

### Johns-Manville "Noark" Automobile Lighting Fuses

You can back these fuses as absolute safeguards. The name "Noark" means accuracy and dependability.

### Johns-Manville Non-Burn Clutch Facings

All the quality, wear-resistance and gripping power that have made Johns-Manville Non-Burn Brake Lining famous are built into Johns-Manville Clutch Facings.

## EQUIPMENT

## A SYSTEM THAT SHOULD BE COPIED

Editor **HARDWARE WORLD**:

The Winchester Repeating Arms Co. have a new line of goods on which they are using the excellent system that should be copied by all manufacturers, that is, to stamp the stock number on the goods, stamping it either on the casting or the wooden part, so that when the goods come in they can be itemized by the stock number, making it much more convenient for the manufacturer or the buyer in selling and marking his goods.

For instance No. 126-6 would be a 6-inch butcher knife with a beech handle, etc.  
Lexington, Ky. **GUENTHER HARDWARE CO.**

Thomas F. Conlan, a pioneer hardware figure in the Northwest, and former president of the Spokane Hardware Company, died of influenza recently at his home at Spokane. Mr. Conlan entered the hardware business in Spokane in 1883, when the Indians outnumbered the white people there.

Adding columns of figures day after day is uninteresting, you say.

Did you ever sit at a performance of Kellar, probably the greatest "Magician" since Herman the Great? Did you ever see him fill a blackboard with columns of figures, six digits wide, as fast as they could be called from the audience and write the answer from left to right immediately after the last number was called?

Did you think "adding figures" was uninteresting then?

What your mind is going through in adding, slowly, the shortest column, would furnish material of the most intense interest to a psychologist. You are doing exactly what Kellar did, with simply a little different speed.

Adding figures is one of the most wonderful feats of the human mind. Interesting? Always.

Chas. W. Nelson has opened a hardware and implement business at McCabe, Montana. Mr. Nelson has long been with the Bainville Mercantile Co., at Bainville, Montana.

George C. Baer & Co., of Pendleton, Oregon, have found it necessary to purchase an adjoining building, and by thus doubling their floor space it will be possible for them to handle their increasing business.

## EDUCATING SALES FORCE STRENGTHENS YOUR BUSINESS

Herewith find renewal of our subscription for our clerks.

We take in our business nearly 30 trade papers, covering every possible angle of same, as we find it absolutely necessary to use every possible source of information in these abnormal times, sending several trade papers to our permanent clerks and other employees. We consider the **HARDWARE WORLD** as especially desirable for that purpose.

We shall continue this practice more in the future than we have in the past, as we find our employees appreciate the compliment and as a rule carefully read the publications, which increase their efficiency and loyalty and encourage them to render both us and our customers better service, making the small investment profitable to all concerned.

We believe that more merchants should avail themselves of the co-operation of trade papers in this manner, encouraging these publications to give more attention to clerks and other store employees, and thereby help build up stronger store organizations and indirectly become more valuable to their advertisers.

We find that our clerks read the advertising in the trade publications and are influenced unconsciously thereby. As they come in direct contact with the customer it is more important to the manufacturer to have the clerks posted on their product than the proprietor, who may do the buying, but leaves the selling largely to his clerks.

Yours very truly,

Michigan

**A. T. VAN DERVOORT.**

## KEEN KUTTER CUTLERY CUTS CIRCLES IN THE CLOUDS

Selling and advertising hardware by means of an airplane has been adopted by the Simmons Company, St. Louis, as the most up-to-date method of reaching the man on the ground, in the city or on the farm, who is in need of the implements in which this great house deals.

At the present time one of the Simmons salesmen is using a Curtiss Oriole in covering his territory in the South. He is utilizing the airplane instead of the railroads in all of his jumps from town to town. Occasionally he takes a townsman up for a short "hop." In one place the mayor flew with him. This novel scheme of advertising, selling and delivering hardware has proved so satisfactory to the Simmons management that they have under consideration the adoption of a fleet of airplanes for use throughout the country.

The plane in use in the South has been christened "Keen Kutter." The name is painted in big letters along both sides of the fuselage, on the rudder and at the tips of the wings. The name of the firm is painted on the nose of the fuselage, with the seven towns in which the company has houses, and on the bottom of the wings, clearly visible from below as the machine soars aloft, is the advertisement: "Keen Kutter Tools and Cutlery Sold and Guaranteed by Dealers Everywhere."

# Converse Tires

*More Miles – Less Skid*

The Converse Product has a time-proven goodness which takes the "ire out of tires." They come as near "selling themselves" as any tires made.

Remember that there is no element of experiment about Converse Tires. The Converse organization is old in Rubber-Know-How—**young** in service ideals and a thoroughly comfortable-house-to-do-Business-with.

N. B.—You should know more about "Converse Dealer Dividends." They insure dealer profits.

### PASSING OF E. C. SIMMONS

Just as this issue is on the press, word reaches us of the death of E. C. Simmons, Nestor of the Hardware Trade of America, and without doubt the most widely known and highly regarded hardware factor in the world.

Mr. Simmons fell and broke his arm about two months ago, and the shock to his system was probably far more than he realized, for he thought he had fully recovered and was about his business as usual.

No words of eulogy are necessary in speaking of Mr. Simmons, for his whole life and character have been an open book.

Many years ago he came to be regarded as the most expert authority on hardware business and conditions generally. Whenever E. C. Simmons spoke everyone knew he had something to say worth while. He was always in demand in business and trade conventions, and was a man who never allowed his interest in his fellow man to wane.

His advice was eagerly sought and all over the country are thousands of merchants who will mourn his death as the passing of a sincere and helpful friend.

The great institution which he founded is a monument to his industry and integrity, and he leaves to his family and associates a heritage that time will never tarnish.

### HOW TO KNOW GOOD WIRE SCREEN

Interesting information concerning the process of wire screen manufacture and some of the objects to be gained and the dangers to be avoided in selecting wire screen for the trade, are contained in the new catalog of the Ludlow-Saylor Wire Co., of St. Louis, Mo.

This catalog is issued in the most finished and artistic style, showing on the cover a huge oak tree in natural colors, signifying the strength of the Ludlow Saylor Co., the story of its growth and the development of Perfect Double Crimp Wire Cloth. The catalog is liberally illustrated, showing views of the plant, narrating the early history of the company, how it was founded in 1856, in the pioneer days of St. Louis, and how it has grown. At the present time there are more than 300 power looms of the most modern type in the plant.

There are now 300 employees, and the factory covers 200,000 square feet of floor space. The general output of window screen cloth is over 20,000,000 square feet per annum, 120,000 bales of Hex Netting, and 10,000,000

to 12,000,000 square feet of special cloth for mining and concentrating plants.

### The Making of Screens

In order to manufacture a strong and satisfactory screen cloth, it is necessary that the wire be of the highest quality. All wire when drawn is hardest at its surface. As wire is drawn it hardens during the process from the outside in, necessitating frequent reannealing.

When the wire is drawn to the desired gauge, it possesses the same characteristics as after the first drawing, namely, a hard, brittle protective shell, surrounding a core of softer metal. The sketch clearly indicates the effects of drawing. In making a screen from this wire it is necessary that the surface of the wire remain unbroken if the screen is to survive long service.

Basically, there are only three ways of making a wire screen. The first and crudest, and by far the least effective from every standpoint, consists merely of straining two independent sets of wires from opposite sides of a frame, so that there is a contact at all points of crossing. (See Fig. 1.)

This gives a wide open area, but is impractical from the standpoint of uniformity, due to the ease in which the wires spread in both directions.

The second method comprises what is known as single crimp screen. The screen is "woven," but only the shoot wires are bent; the warp wires remaining straight (see Fig 2). This type also has the fault of spreading, together with a bad mechanical fault, which will be explained in a later advertisement.

The third and best way of constructing wire screen is the "double crimp" way.

This means absolute rigidity, because both warp and shoot wires are equally crimped (not bent sharply), at every point of crossing. (See Fig. 3). The meshes cannot possibly spread in either direction. Thus perfect uniformity is assured over the whole surface, for the entire life of the screen.

### INTRODUCING PEERLESS TOOL BOX

Providing profit for the merchants and protection for the automobilist's tires, tools, chains and accessories of all kinds, out of sight in a safe, secure enclosure, is the Corcoran Manufacturing Company's tool box, listed as "No. 30 Peerless Tool Box for Ford cars," shown herewith.

This box is of a convenient size—22 inches long, 9 inches wide and 7 inches deep. It is scientifically constructed with a full-finished steel body, corru-

gated, which permits of great strength and durability—but is not handicapped with excess weight, ordinarily necessary to incorporate strength into a box of this size. The lock, which is rustproof and guaranteed for the life of the box, is concealed. The hinges are riveted—not welded—making it impossible to break them off. The lid, which has a crown top and a reinforced beading along the edge, will not dent—and the corrugation on the bottom of the box allows air to circulate, preventing the formation of rust.

The Peerless Tool Box was primarily designed for the carrying of tools, but its usefulness is increased tenfold by the motorist who carries his chains and other valuable equipment in it. An inquiry to Department A. will bring detailed description of the Peerless Tool Box, as well as information on The Corcoran Company's complete line of Peerless Products for Ford cars—radiators, radiator and hood combinations, hoods and fenders.

It takes a lot of tact to make the contact between folk and hardware.

## PEERLESS FENDERS FOR FORD CARS

These fenders are an exact duplicate of the Ford fender.

Made in Two Sizes:

No. 16 fenders fit all model cars up to and including the 1916 model.

No. 17 fenders fit 1917 and later model cars.

Peerless Fenders are built of an especially heavy gauge full-finished steel—No. 20 gauge. This sturdy construction enables them to withstand severe jarring and vibration and prevents sagging. Finished in two coats of black enamel baked on.

### JOE WELSH THE KING FISHER

There is no merchant of sporting goods, especially fishermen's supplies, in the western half of the U. S., who does not know the name of Joe Welsh, with a close friendly feeling in the heart whenever it is mentioned. Joe Welsh combines in admirable proportion the sportsman with the business man. It is not very often that a man is able to combine business with pleasure in so rare a combination as does Joe Welsh, for his business consists in furthering the pleasure of his fellow men, in the production of fishing tackle designed for those who know and are particular.

All the Welsh family are anglers, and have been for many years. The name Joe Welsh is registered in the United States and Canada. In addition to the tackle which Mr. Welsh manufactures at Pasadena, California, he is also an importer of anglers' supplies. He is sole agent in the United States and Canada for the celebrated Robertson genuine Telarana Nova Leaders, which are unique in that they have no knots, no splices, and are strong and durable, while at the same time invisible.

Mr. Welsh does not take all the credit for what the Welsh family has turned out, for his son, S. D. Welsh, is the patentee of the new

Welsherana Lure, which is illustrated herewith, which Mr. Welsh himself has described for the benefit of our readers.

This new minnow bait for bass fishermen is made in amber, red, green, orange and purple. Another addition to the interesting line which Mr. Welsh distributes to the trade is the new Blue Angel, and the floating dragon fly, known as the Joe Welsh Blue Devil darning needle fly. The Blue Devil comes in trout and bass sizes and is a grand addition to the Joe Welsh products.

At our request Mr. Welsh has put in his own words something of the lure of the dream and the point of view and thought of the real fisherman. The merchant who carries fishing tackle will receive first hand knowledge of the new tackle as well as an intimate insight into the fishermen's point of view, which combination will be invaluable to him this season in handling his fishing tackle stock.

### New Lures For Old Pools

By Joe Welsh

"Every angler had his pet place picked out two months ago. His dreams are pleasant and the anticipation of getting out into the woods and waters is ringing in his ears. He is full of strange notions of how he won't lose the big one this season that fooled him last season."

Lures of all kinds have been improved the past few years and anglers are always hunting up the latest. Yes, we are all alike when it comes to fishing. But just to fish for fish and not be observant of why we are having good or bad luck seems to be left to a few close observers who watch every sunbeam, shadow or cloud, cold blast or gentle warm breeze, those changes in nature which almost each day bring forth a new winged insect or water beetle. To the writer, this is perhaps one of the most fascinating features of the angle.

### Trout Knows What He Wants

Here we observe a lusty trout rise at a small winged insect. We cast over him; nothing doing. Again he rises at a natural fly, two more rises further down the pool; again and again they rise till the pool boils with rises. You are bewildered and cannot reason it out. You have exhausted your fly assortment as well as your vocabulary, perhaps, of none too gentle words. To be sure, the stream runs along, singing its own music, unmindful of your discord of words. The trout are still rising.

All of a sudden, you are creeping up stream under a bunch of willows. You feel something crawling on your neck. You reach and grab it, to find a pale, greenish-blue bodied, transparent-winged fly. You have nothing like it in your fly book. You stand a minute and examine this fly. You are astounded to hear the trout splashing lower down the pool. You had shaken a bunch of willow flies into the stream. The trout were busy and wanted that kind of fly at least as long as they lasted.

This fly has never been properly imitated and through long, tedious thoughts and tryouts, at last the thought dawned on Joe Welsh to make a fly with a transparent, tough wing, still flexible enough to imitate nature.

New Welsherana Minnow Bait for bass fishermen. The lure is tinted celluloid. See the eye.

Did it ever occur to you, Mr. Tackle Salesman, that all winged insects that trout rise to have transparent wings, excepting in the moth family? There is no color in the fly wing. The color is in the legs, body and head.

This is what is real new in fly hooks.

#### Minnows for Bass Fishing

Again, there has been a demand for a minnow for bass fishing that could be cast on a fly rod, getting away from the hideous plugs. This has also been accomplished and is a delight to bass fishermen who want to use trout rods, thus giving three times the sport of playing the fish. Those transparent baits are wobblers. They are known as the "Welsherana," and are made in amber, red, frog green, orange and purple, and those that have used them pronounce them the "acme" of floating, transparent wobblers, and bass getters. This bait will be on the market this season.

The transparent winged flies are only in limited quantities and come in five colors—blue, red, green, yellow and black.

### HERE IS THE RED SEAL SPARKER

A new product of the Manhattan Electrical Supply Co., of New York, is the Red Seal Spark Battery, suitable for every use and pictured herewith. It is simple in construction, strong and durable. A number of dry cells are put into a moisture proof container, per

fectly insulated from one another and hermetically sealed, so that only the two terminal binding posts are available.

The carrying handle is of strong webbing, having the ends securely anchored in the interior of the battery. Red Seal Sparkers are recommended for use in all damp or moist installations, on vehicles or for emergency testing. They are stocked to carry from two to six cells.

The Farmers' Mercantile Company of Bellingham, Washington, has taken in as stockholders, W. V. Weber and John Breen. Mr. Weber will have charge of the hardware department, having been connected with the Company for some time in this department and recognized as an authority in his community.

Indicative of its progressiveness and foresight, the Mehl Hardware Company, of Uplands, California, is remodeling the entire front of its store, bringing it up-to-date with a model entrance, and large prism lights, which will illuminate the interior of the store in a pleasing and adequate manner. Rearrangement of the interior will make possible a better display of the electrical and plumbing fixtures.

#### "HARDWARE WORLD" MAKES MERCHANT MORE MONEY THAN ANY PAPER HE EVER READ

Enclosed find check to cover our subscription for three years. I want to state that I have received a great deal of good from your paper in the past year, and I think I am safe in saying that it has made me more money in the last twelve months than any other paper I have ever read.

Nebraska

W. C. KLEIN.

### THE IMPULSE

It seems to me I'd like to go  
Where bells don't ring, nor whistles blow,  
Nor clocks don't strike, nor gongs don't sound  
And I'd have stillness all around.

Not real stillness, but just the trees'  
Low whispering, or the hum of bees,  
Or brooks' faint babbling over stones  
In strangely, softly tangled tones.

Or maybe a cricket or a katydid,  
Or the songs of birds in hedges hid,  
Or just some such sweet sounds as these  
To fill a tired heart with ease.

If 'twern't for sight and sound and smell  
I'd like a city pretty well;  
But when it comes to getting rest,  
I like the country lots the best.

Sometimes it seems to me I must  
Just quit the city's din and dust  
And get out where the sky is blue;  
And, say, how does it seem to you?

—Eugene Field.

### IRISHMAN ALWAYS THERE

Three men, an Irishman, a Swede and a Hebrew were brought to court. The Hebrew was arrested for stealing a cow; the Swede for stealing a horse, and the Irishman for stealing a wagon.

"Well," said the judge, turning to the Hebrew, "where did you get the cow?"

"I've had it since it was a calf," was the reply.

"Where did you get the horse?" he asked the Swede.

"I've had it since it was a colt," was the reply of the Swede.

"And Patrick, where did you get the wagon?" asked the judge of the thief.

"Oh, Your Honor, I've had it since it was a wheel-barrow."

### HERCULES SODER IN THE GARAGE

Among the innumerable uses found for Hercules Cold Soder, manufactured by the Hercules Products Co. of Council Bluffs, Iowa, is its utility to the car owner in his garage for mending cracks in cylinders, leaks in gasoline tanks, or auto radiators, in fact everywhere that a crevice in metal needs mending."

The manufacturers claim that Hercules cannot be equalled as a soder for mending holes or leaks, but will not weld or join two pieces of metal together. It will repair any leak about the house in the water pipes, lavatory tanks, radiators, aluminum and enamel ware, or any pot or pan in the kitchen. It is put up in tubes, which are packed in attractive counter display boxes, containing two dozen, each tube selling for 25 cents. The announcement of the Hercules Products Co. appears elsewhere in these pages.

It is more difficult to repair a credit that is once shaken, than to keep that in a flourishing greenness which was never blasted.

# MOSSBERG

## ALL STEEL

### Wrenches and Tools

### More Sales More Satisfied Customers

How often is it necessary to turn away the prospective purchaser of a wrench because you are unable to supply the particular type of wrench desired?

The progressive dealer overcomes this handicap by stocking the Mossberg line of All Steel Wrenches. Its completeness makes the possibility of a sale greater. Whatever the size of nut—whether square or hex, there is a Mossberg wrench to handle it. No matter how unusual the purpose for which the wrench is needed, there is a Mossberg to meet the demand.

The garage man, the motorist, the expert machinist, the marine engineer, each with his particular needs, can find the right wrenches among your Mossberg stock. And he knows that the Mossberg may be relied upon. He is familiar with its reputation for strength and service.

## BEWARE OF CROAKERS

(By W. O. Rutherford, Vice President the F. B. Goodrich Rubber Company)

It has always seemed to me that there is a good deal of sound philosophy in Benjamin Franklin's statement that we should beware of croakers. This advice is as sound today as it was a hundred years ago. All industry has been confronted with menacing conditions during the months and years just past, but I am optimistic enough to believe that every major development in our international growth, in our civic reforms and in our economic readjustments will lead us to bigger and better things for the future. Every one of us should be an optimist; there is no room for pessimism.

By referring to one of my charts, I notice that in 1905 there were 150,000 automobiles in the country; fifteen years later we have passed the seven million mark. Now I hear much about the "saturation point" and that other indefinite period when we shall have "diminishing returns."

Automobiles come in the "consumption" class of commodities, i. e., they are used, worn out and replaced as an essential part of life, just as clothing is. I forecast that we shall be able to absorb not only the present automobile production, but we shall even sustain the greater growth which ambitious manufacturers are meditating.

## Production Is Problem

Hence it is a problem of production, and every citizen, from the management to the worker at the bench, should do his share toward keeping an uninterrupted flow of raw materials and finished goods going through the mills, warehouses and stores of this country, and every man has a right to share in the fruits thereof. In no other line of industry are the relations between capital and labor on a friendlier or sounder footing than in the automotive field, hence there should be no cause for apprehension.

So far as passenger vehicles are concerned, we are now at the crest of a buying market. Production does not equal demand, and personally I expect this condition to exist for some time to come. I recall being told at one of the New York shows 'way back in 1907 that the then annual production of 60,000 cars marked the peak point in automobile manufacture, and that the number of cars to be made annually would lessen rather than increase.

Just as that prophet of gloom was suffering from brainstorm, so will I also classify those who today are refusing to advance with the times. The proposed car production for 1920 is 3,000,000 cars. An analysis of the market, at home and abroad, shows an ability to absorb even greater production, hence the possibility of a car shortage is imminent.

## Rural District Disappearing

The average reader may say, "Well, this growth of the automobile industry is all very nice, but wherein does it affect me?" Anything relating to the third largest industry in the country affects everyone. Thus within the past ten years our cities have undergone a wonderful transformation.

A decade ago Chicago boasted that it was forty miles from one side of the city to the other. We marveled. But today cities having a population of only two or three hundred thousand spread themselves over as large an area. In some of our states the country is no longer rural, it is interurban. Think what this means for health and culture; again think what this means for real estate values.

(A certain authority estimates that for every million dollars' worth of automobiles produced there is produced another million dollars' worth of property values.) Now consider how important it is that we should have a network of highways in every community for freight and passenger traffic. Someone has said that highways are the measure of civilization. I believe this implicitly. So in the final summary my conclusion is that the number of cars produced during the years to come does not rest with a group of manufacturers in the Central West, but lies rather in the hands of the general public. Authorize the building of suitable highways and the manufacturers will motorize them, greatly to the advantage of the community and the individual.

At the Montana State Implement Dealers Association, held at Great Falls recently, the following officers were elected: T. E. Gay, Hardin, Montana, re-elected president; N. M. Walker, Lewistown, vice president; W. D. Billings, secretary and treasurer.

About a hundred attended the convention.

## FORD FOOT ACCELERATORS

About the first accessory that the average Ford owner thinks of purchasing is a Foot Accelerator. They are about the handiest thing that can be put on a Ford, but should be made

right, so that the driver's foot will not get tired after a long run.

In order to meet the demand for a Foot Accelerator of this character, the Gemco Manufacturing Company, Milwaukee, Wisconsin, are now manufacturing one which is equipped with a foot rest. This is shown in the illustration.

The Accelerator itself is attached to the carburetor and may be operated independently of the hand control and the hand control in turn can be operated independently of the foot control. With a Gemco Accelerator a Ford can be handled most efficiently in heavy traffic. Quick starting and perfect control are obtained.

## TO THE EARTH'S CORNERS WITH AMERICAN ARMS

**Wide Distribution of Rifles You Handle Should Prove  
Strong Selling Point**

Approximately 1500 rifles and shotguns are turned out complete every day by the Winchester Company alone, not to mention the Remington, Savage, Marlin, Stevens and other outputs.

Even in view of the great population of the United States and Canada, that looks like a big figure, especially when one takes into consideration the fact that guns are not perishable commodities but will last a lifetime and in many cases are handed down from one generation to another.

### Where Do They All Go?

Think of some out of the way place down in the desolate parts of the earth that you read of once in your geography lessons and have forgotten all about since. The Fiji Islands? There are American rifles there. In the export department of these plants you will find records of shipments made to these far away islands of the south seas.

Far inside the Arctic Circle lies Iceland. Surely, you think, this is not a field for American-made guns, especially for rifles and shotguns of twentieth century model. Well, you're wrong again. For there in the land of the six month winter night you will find them. Still more, you will find they are not simply the guns of tourists, but actually for sale in the shops of dealers.

In the jumping off places of the earth, in the heart of darkest Africa, in the prayer-wheel country of Thibet, within the Arctic and Antarctic, you are always on the trail of fire-arms made in the U. S. A.

The upper regions of the Amazon, scorching under the equatorial sun, denized by the strongest and most dangerous wild beasts and reptiles in the world, are no places for a tenderfoot. Neither are they healthful as resorts for the man who has not carefully considered his armament in advance. These are places where the American .44 is the law, and, oftentimes, the treasury.

An interesting story is told of one of the native owners of a rifle of this caliber, and the individual who represented the police department, the courts and the majesty of government in one of these South American lands. This gentleman with the multiple functions had been trying to impress upon the natives the unlawfulness of certain acts and the dire punishment which was liable to attend the transgression of certain mandates which he had been given the authority to enforce.

"This," said the majesty of government, "is the law of the land."

"Oh, no," responded the unimpressed auditor. "The carbine is the only law hereabouts."

### Bread for Cartridges in Brazil

In Brazil much of the country could never have been traversed and brought to the use of civilization without its help nor could it be retained today without the trusty defense represented by such a weapon. In many parts of this great South American republic, the ammunition used for these guns has become the medium of exchange among the people, so that they buy their bread and other necessities, as well as defending property and protecting lives.

Sir Ernest H. Shackleton, intrepid Antarctic explorer, whose journeys into frozen lands of the south have stirred the world with their romance, has carried the American rifle as far as man has trod toward the South Pole. In one of Shackleton's expeditions, the conditions became so serious that it became necessary to discard all articles that were not absolutely necessary in order to reduce the weight of the pack that had to be carried in the dash for safety. Articles of pure gold were unhesitatingly thrown to the bleakness of Antarctic snowdrifts, but in the discard Sir Ernest carefully retained a rifle and a supply of .44 cartridges.

Close to the North Pole Uncle Sam's fire-arms have also served as the friend of man in his hour of extreme need. When Lieut. McMillan made his famous Arctic expedition he carried his rifle with him and as McMillan and his Eskimo guide were making their way, the Eskimo, who had on his sleds all the eatables for the two, suddenly bolted. He was off like an arrow across the ice. It was evident he intended to desert, which meant death by starvation in the ice fields for McMillan.

The explorer had two cartridges left. He placed them quickly in his magazine and fired, one into the air to stop the fleeing deserter. The Eskimo kept right on. A little more and McMillan would have been alone, deserted, foodless. He raised his rifle again, aimed and fired the last cartridge. This cartridge meant life or death to McMillan. No sooner had the rifle barked than the Eskimo went down in a heap. McMillan had been saved by his rifle.

### Fijis All for Repeaters

In the Fiji Islands rifles are being purchased by the natives. These guns are taking the place of the 'oomerangs and bows and arrows of our early geography days. The modern rifle does the trick for the modern Fijian that the boomerang did for his father. While the boomerang, if carefully handled, might come back after each shot, the modern repeater stays with him and reiterates his message again and again in tongues of flame.

Into the remotest parts of Africa it goes. Grimes, famous South African huntsman, who has traversed the wilds of Rhodesia again and again, has a record of more than 100 elephants killed with his trusty repeater. One of the proudest of his records was that of killing thir-

# MARQUETTE LUGGAGE CARRIER

This all-steel folding Luggage Carrier is built for both service and convenience. It attaches to the running board without the use of tools, and when not in use folds down out of the way. It is made in two sizes--the smaller size is adjustable from 27 inches to four feet, and the larger adjustable from 37 inches to five feet. Fits any car. Does not detract from the appearance of the car. Very strong, durable and neat looking. Enables one to carry baggage, etc., outside the car without injury to either baggage or car.

## MARQUETTE TIRE TOOL

**A GRIP  
LIKE A  
GIANT HAND**

Takes all the hard, dirty, useless work out of changing clincher tires. Grips the tire as you would with your hand--no danger of injury to tire or tube. It is the "off again, on again" tire tool with the reputation for satisfaction. Makes tire changing so simple and easy a child can use it successfully.

More than a hundred Jobbers supply the trade with all Marquette Specialties. If YOUR jobber does not carry them, write us direct. . . . .

**MARQUETTE MANUFACTURING Co. Inc.**  
**Saint Paul, Minn. U.S.A.**

teen elephants in succession, each with but a single shot. Grimes used the famous .405, that heavy power rifle which the late Theodore Roosevelt used on his big game hunt in the heart of the dark continent.

Into every land where the sun rises, the American rifle has gone and is going. Into the inner recesses of China, into Japan, into Siberia, down into the spice lands of the East Indies, into the wildest parts of every continent it has traveled. It has played a large part in the clearing of Australia. James J. Hill, the pioneer railroad man, said the building of our West could never have been accomplished without the aid of the rifle.

A prominent world traveler and official of one of our big universities once told me that wherever he had gone in the most out of the way nooks and corners of the world, there were always two American products in sight, which reminded him of home—and one of these was the American-made rifle.

### A POCKET TOOL KIT

The average mechanic or person who is called upon to do a number of odd jobs on camping, fishing and boating trips, or in every day duties around the house, will find a very practical pocket accessory in the pocket tool kit which is

made from a leather substitute. It should contain a pocket knife with an adjustable handle, to which can be attached a screw driver, a cork screw, a bottle opener, a small chisel, a file, a saw and a knife.

When the particular tools are not in use, they are kept in the pocket. The whole packet is only about two inches wide and three inches long. The leather substitute covering keeps the articles dry and prevents rusting, because it does not absorb moisture. It will not wear holes in the pocket. The accompanying illustration shows the simplicity of construction of the article.

### BELL OR BATTERY

Colored Janitor—"Doctah, what's dat yo' all got in dat er bottle?"

Doctor—"That's Dobell's Solution, Charley."

Colored Janitor—"What's the mattah with yo' alls do' bell—am the batteries weak?"

### YALE & TOWNE MOVE OFFICES

For the sake of efficiency and satisfaction to its customers the Yale & Towne Mfg. Co. have moved their general offices from New York City to the works at Stamford, Conn. Limited offices will still be maintained in New York, but all correspondence should be addressed to the Stamford Works.

The company further announces that it will withdraw from the direct solicitation of architects and contractors of contractor business in Yale Builders' Hardware, and will not make lump quotations based on schedules compiled from plans and specifications. Furthermore the line of builders' hardware will be reduced, and all superfluities eliminated. Thus it is the intention of the company to distribute strictly through the channels of the hardware trade.

### SPIRIT OF BUTTERFLIES

It occurs to us that more appropriately the artistic and effective sales literature of the Air Way Cleaner might be headed "The Spirit of Dust Flies," yet the Air Way Co. has taken butterflies as its symbol through all its advertising and literature.

This new sales pamphlet pictures the cleaner in all stages of operation, showing enlarged pictures of its working parts, and describing the whole, in such a manner as to create desire in the mind of the housewife. Pictured also is the light, modern factory of the Air Way Co., and if pre-natal inspiration means anything at all, the Air Way Cleaner should live up to its name.

### LENNOX SAW MAN IN WEST

Those who have come to know the Lennox Saws will be glad to renew their friendship with N. J. Parver, factory representative, who is now making the rounds of the western territory. Those not acquainted with the Lennox blades of the American Saw Mfg. Co., had better gird on their armor, for Mr. Parver is powerful in the attack, and he has a strong army of steel behind him.

### AUSTIN AND LINDERMAN CO. COMBINE

The combination of the F. C. Austin Co., Inc., and the Linderman Steel & Machine Co., with offices in the Railway Exchange Building, Chicago, increased eight-fold the capacity of the present Austin output, and gives this Company perhaps the largest capacity for earth-loading and cement working machinery in the United States. F. C. Austin retires from active management and the president of the Linderman Co., B. A. Linderman, assumes control.

E. Demopoulos is a new hardware dealer at Anacortes, Washington. He will make a specialty of marine hardware and small ship chandlery, as well as a general hardware line.

Severin Oie of Helena, Montana, has purchased the Bertelsen-Magnuson Hardware Store at that place. Mr. Oie was with the Stith Hardware Company for a number of years and is one of the prominent hardware men in Montana.

The Household Hardware Co. has been organized at El Paso, Texas, with a capital of \$50,000. They have taken over the retail hardware business of Krakauer Zork & Moye at that place. This conforms with the announcement of the Krakauer Zork & Moye Co. of a month or two ago that they had to divide their business and separate the wholesale from the retail features.

The new firm opened with a contest for a business slogan in which a \$25.00 prize was offered for the best slogan.

### ALL THINGS BEING EQUAL, WHICH SHALL I BUY?

Buying a delivery truck is not different from buying any other merchandise. The following advice to merchant buyers in purchasing a motor truck is from a recent address of George B. Walker, a prominent manufacturer. The sound reasoning applies to all lines:

"With the market already crowded with many makers and nearly all making the same claims for their product, upon what grounds is it safe to make a selection? Be referred to the same motive which prompted you in the selection of your other machine equipment.

"Did the reputation of the concern which made your machinery mean something to you? Did its stability, based on its financial condition, serve to win your confidence? Did the quality of the work it turned out influence you? Did its record of performance, going back over years of use mean something? Did the operator's costs of running that machinery, as compared with other types, fortify your belief as to its economy? And finally did other leaders in the industry show their confidence in it by standardizing on it, buying more year after year as their demands required?

"Let the same line of reasoning be applied to the selection of motor trucks and watch out for the alluring sales bait so frequently snatched up by merchants, such as 'immediate delivery,' ridiculously long guarantees, spectacular performance, or patented sales 'features.'

"Avoid being talked into the purchase of a transportation 'monstrosity' in order to cater to the whim of an individual, unqualified to pass upon machinery design. Bear in mind the fact that already motor trucks to the value of 1½ billion dollars have been put into commercial use, and if these 'novel' ideas of accomplishing something for nothing had genuine merit, the old established motor truck manufacturers, would have adopted them long ago as standard equipment."

### DEATH CONSISTENT WITH DIAGNOSIS

Representative Flood was discussing the lamentable failure of a prominent politician made when sent abroad recently on a diplomatic mission.

"Blank's failure was inevitable," said Representative Flood. He's about as much a diplomat as the Appomattox physician.

"'Doctor,' a patient said anxiously, to him one day, 'are you sure you have diagnosed my case properly as pneumonia? I have heard that a doctor is sometimes wrong in his diagnosis and treats a man for pneumonia who afterward dies of typhoid fever.'

"'You are wrong, sir,' the physician answered pompously, 'if you think that is likely to happen with me. When I diagnose a case as pneumonia the patient dies of pneumonia.'"

If you work for a company, be for it.

There is some work which is particularly satisfying—the kind of work which has no half-way places in it, such as tree cutting. A wood-chopper can't leave a tree half up, half down; when he starts his job he has to go through with it and he knows when he has finished. It is a great feeling. You know nothing makes time go faster than to be able to say three, four or ten times a day: "Well, that's done."

Although your work itself may continue without break, it can always be divided up into small units of which you can say, "That's finished."

The next time you find yourself getting bored just split up your duties into bits and finish them one at a time.

### A STORE-ORDER PROTECTOR

Store orders have a way of being mislaid, soiled and torn on their way through the various departments, or while they are in force. The accompanying cut pictures a practical order carrier and protector.

A sheet of transparent sheeting—the same material used for lights in auto curtains—is cut to desired size. A piece of light-weight leather substitute is then cut about a half inch larger all around than the piece of sheeting. This extra half inch allows for a lap-over on all but the top side of the protector. A sewing machine stitches the lap down to the sheeting, forming a large flat pocket, open at the top for the insertion of the order.

Both the transparent front and the coated fabric back are water-proof and grease-proof. Dirt or grease may easily be wiped or washed off either without injury to the material.

The Thomas Hardware Company at Canon City, Colorado, has recently enlarged its store to nearly double its capacity by the addition of an adjoining store.

# Distributors and Dealers!

## This is the day of the Sterling Tire!

**W**E want wholesale distributors and retail dealers to write at once for special information. We still have some unoccupied territory.

The endurance that all tire makers have been striving to build into their tires for many years, we now give you—in **STERLING TIRES**.

Our earnest desire to make a thoroughly reliable tire, coupled with the fact that we have every manufacturing resource, has produced an endurance in **STERLING** Tires that has seldom been equalled—and never excelled by any other tire.

### Double Profit for Dealers!

The dealer makes two profits on every **STERLING** Tire: First, he makes his customary cash profit—and second, he makes the additional profit which always comes from a satisfied user.

**Better write us today!**

## TIME FOR BUSINESS MEN TO PROTEST

### **Riot of Extravagance in Washington Should Be Halted**

More than a year and a half has elapsed since the war ceased, but if one is to judge by the vast army of clerks and employes that are yet mobilized on the payrolls in Washington, they would think that the war was still in full swing.

He would be disillusioned, however, if he chanced to notice their activity, or rather their lack of it, for activity is only manifested at the time the monthly payroll is to be signed. Surely in the year and a half since the armistice there has been a sufficient length of time for the various departments of the administration to shape their affairs so that thousands of useless employes could be dispensed with and millions and millions of dollars saved to the tax payers. Every business man should at once voice his protest to his congressman and senator, that this condition should be allowed to longer continue.

Of course there is a campaign this fall, and these employes are potential voters and useful appendages for the November election. But that is no reason why they should be kept at the public crib, and the business men of the country really paying their salaries. If they are to do politics, then let the politicians themselves, who are most concerned, foot the bills, not the tax payers.

There are actually now more than 200,000 employes today in the government service than were before the war began. Before the outbreak of the war there were 37,908 clerks and other similar employes in the District of Columbia. This force was increased until during the war, at the time the armistice was signed in November, 1918, more than a year and a half ago, the number was 117,454. At the present time there are over 100,000 department employes doing the same work that was done by 37,000 before the war.

Throughout the entire country there were approximately 500,000 similar employes in the government service before the war. Now, a year and a half after the war, there are 726,369.

### **Almost Every Official Has a Publication for His Own**

Just as an instance, in one department alone, showing how "work" is provided, a congressional investigating committee has found that there are issued by the present administration 266 regular publications, millions of copies of which are being distributed. The total cost of these publications is over two million, five hundred thousand dollars.

The investigating committee which has been looking into this matter for the past year has ordered 108 of these publications discontinued, at an annual saving of over one million dollars, and it is safe to say that at least 150 more could

be discontinued at probably double the saving.

The business men of the country have a right to make inquiry as to why it is necessary to issue 266 regular publications to keep the people informed as to the activities of the government, when various newspapers and press agencies are provided at private expense to keep the country informed on all manner of information it is possible to obtain.

Why is it necessary for this enormous waste of paper, material, labor and money? Every publisher, every newspaper knows the vast quantity of matter that is sent out from every department. Ninety-five per cent of it goes into the waste basket unopened.

We have been hearing a great deal about the shortage of paper and its high cost. Surely one reason of this is that the government at Washington is the most extravagant waster along this line, in fact this waste in Washington would keep many thousand country newspapers in paper throughout the entire year, for the country newspaper has been the hardest hit, thousands of them have had to suspend publication on account of the high price of paper and cost of material generally.

It has been well said that every official seems to have a publication all his own.

### **Continuous Orgy of Waste**

The government operates the largest printing office in the world, employs thousands of men and women, but to keep all the officials supplied with facilities for their propaganda, it has been found that outside of the government printing office, it maintained 287 independent printing plants in Washington to issue these many departmental publications.

The publishers of the country have found it very difficult to obtain help at any price, and can now understand at least a partial reason for the shortage. These men can go to Washington and work a few hours a day at a good salary, and being only necessary to work perhaps half a week and lay off the remaining half in order to spend what is earned during the first half. Newspaper publishers may thus gain an idea as to a part of the reason for the handicap under which they have been laboring, to say nothing of the millions of the tax payers' money wasted.

And what is done in the printing line is repeated over and over again in various other departments.

It is the business men of the country who are footing the bills, paying for this enormous waste. One has only to visit some of the government offices to see that no business house could be successfully run in any such manner as the government business is presumed to be run.

---

E. G. Kriege has purchased the hardware department of W. C. Kriege & Company at Edwardsville, Illinois. The new proprietor is established in new quarters.

We strongly advise selling Hygrade Lamps at list. They're worth it.

## Hygrade Lamps

Do not have to be sold at cut-rate prices

Hygrade Lamps cost the dealer more than any other independent lamp—and they're worth it.

They're at least the equal of any other lamp made. They sell readily on their merits and there's practically no comeback, so that you don't have to offer them at cut prices to make ready sales.

So sell Hygrade Lamps at the list prices. They're worth it and you can get list just as easily as you can a lower price.

In other words, make the profit rightfully due you on a first quality article by keeping the price where it belongs.

# Worth While Auto Accessory Window Trims

There are two kinds of automobile accessory windows—good and bad. In which category do your trims come? If the latter, the remedy lies in adopting the suggestions that follow:

## Suggestions From New York

The Times Square Auto Supply Company, New York City, displays accessories on a tier of shelves, with a card underneath calling attention to a particular point about the goods displayed in the section above. Here is just one example, picked at random:

Hassler Shock Absorber. Make your Ford ride like a Pullman.

The Auto Owners Supply Depot, New York City, have a glass shelf dangling down each side of their window. Each shelf is lowered about half way and attached to the ceiling by means of non-skid chains. On each shelf are laid various automobile accessories that have a particularly timely appeal.

The New York and Brooklyn Auto Supply Company cover their display moulds with auto rugs and wraps. Each mould is occupied by an article that goes with the classiest car. Some of the goods individually exhibited in this manner were lamps, leather luncheon outfits, sweaters and windshields.

The Times Square Auto Depot, New York City, draped their window at the rear center with a gray satin curtain that was bunched with tassels to form an opening. Then followed a stairway effect, achieved with a tier of shelves, draped with auto rugs and furs. Arranged on the stairway floor were gloves, cap radiators, footwarmers, etc. Both to the left and to the right of the stairway was a rug, folded around a tailor's display form, in the same way in which a suiting or dress fabric might be presented. Reclining on the floor at each furthestmost side was an auto rug, over which were laid small accessories.

The King Tire Company, New York City, presented auto goggles on cream colored paneling at the rear, with the center of the paneling occupied by a gigantic pair of glasses.

The Lowe Motor Supply Company, New York City, had a large card on a rear panel, with the two side panels covered with cut-outs supplied by the national advertiser, of the device advertised. The card stated that:

"Your car doesn't need to rattle. Install an Advance Cork Insert."

The window was floored with black, while the red square cartons made dandy foils for a checkerboard effect. Each alternate square was left unoccupied in order to carry out this ingenious stunt.

## New Jersey Also Represented

The Times Square Auto Supply House, Newark, N. J., had a number of attractive cards in

their two windows. Each card was decorated at the left hand side with a picture of a traffic cop pointing to the "Stop" sign. The best examples that I noticed were as follows:

"Our Inner Tubes wear out—but they take a long time doing it."

"When they sell a horse they usually trim it up. Do the same with your car. A few dollars well spent will bring several more."

"Whether a Tire or a Cotter Pin, we have it at the right price."

"Small items of great importance to every motorist."

Seedman, Brooklyn, N. Y., has a large board outside his premises that contains space at the bottom for the chalking of the special, for the particular day. On the day I passed, the announcement ran:

"Seedman for Tires. Get our prices before buying. Today's Special—32x3½ Republic Tires. Guaranteed. Now \$18.45."

## Tire Display Methods

Tires, of course, are worthy of a special window every now and then, which is obviously the way the following concerns feel about it.

Fellsen Tire Company, New York City, inclosed their trim with a three-piece paneling, in purple with a gold border. There was a slit made through the center panel to permit of a tire being partially inserted. At each side in front was a carton with inner tubing laid on top.

The McGraw Tire and Rubber Company, New York City, displayed a solid black tire for an auto truck in the center on a display pedestal. The solid tire was surrounded at each far side by a white ordinary auto tire, displayed in the same effective manner.

Chief Keokuk

## Get This Message From Texas!

Straight from the shoulder—Mr. Distributor—from rough and ready Texas! Without any bones about it, The Anderson Rubber Co. of Dallas will tell you:

“After eighteen months handling this tire . . . we have one hundred and seventy-five dealers in the state and not one of them has registered a kick against Standard Four Tires.”

“Service that pleases the customer,” as one dealer puts it, “also pleases the dealers.” Standard Four distributors can make their dealers an unusually profitable Quality Tire Proposition.

Our increased production now offers splendid opportunities to a few more distributors. Write at once for territory, terms and details on advertising and sales help furnished to Standard Four distributors.

### Standard Four Tire Company

Dept. T

Keokuk, Iowa

## BRANCHES AT

245 N. Pennsylvania St.  
Indianapolis342 West Pico St.  
Los Angeles

# Standard Four Tires

The Keystone Tire and Rubber Company, New York, introduced an auto tire in the middle of their window, with a round card inserted in the inner circle of the tire. The card was as below:

"This Keystone Tire ran 17,000 miles. Guarantee is for 6000 miles."

The latter backing up the foregoing facts was laid flat on the floor in front.

The Times Square Auto Depot, New York, draped both the floor and the rear of their trim with auto rugs and robes. The tires were displayed on clips in the center and at the two sides.

W. W. Kamiem, Brooklyn, N. Y., revealed in his trim a tire leaning against the rear panel, with bags of non-skid chains laid on the floor down in front.

An attractive window trim, it should be remembered, pays a high rate of remuneration for the time and expense involved.

The Montana Hardware Company at Butte, Montana, is installing a complete and separate automobile accessory department in its organization to meet the constantly increasing demand for that line of goods.

W. A. Reynolds and his brother, J. H. Reynolds, will combine in the purchase and reorganization of a new firm at Swink, Colorado, and henceforth will be known as Reynolds Brothers. They will carry a full line of hardware, automobile accessories, etc.

G. H. Wells, formerly of Monrovia, Cal., has purchased the H. M. McKee Hardware Store in San Diego, and he will be the active proprietor there.

The J. B. Wood Hardware & Rubber Co. is newly established at El Paso, Texas. The new firm has taken over the business of the Shears Hardware Co., and the capital stock has been increased from \$36,000 to \$50,000.

The Bob Woodsworth Hardware Co. has been incorporated at Alamogordo, New Mexico, with a \$25,000 capital stock. Bob Woodsworth, A. E. Martin and W. H. Shelton of El Paso are the stockholders.

The Midland Hardware Co. has taken over the interests of the Ryniker Winter Hardware Co. at Billings, Montana, and is now in its new quarters. The company has a complete stock of automobile accessories, sporting goods and implements, besides a general hardware line.

The Erb Hardware Company at Lewiston, Idaho, is planning a three-story and basement building, annexed to their present structure, in order that tremendously enlarged business may be conveniently cared for. The present structure, with the basement, has only 22,000 square feet now available. The plans for the new building will increase it to 37,000 square feet.

### ARMY PANS IN AUTO-KITS

The Prentiss-Wabers Stove Company just bought a large quantity of folding handle aluminum frying pans from the Quartermaster Department, United States Army. These are the army kit pans with the cover and will be quite advantageous, for they take up very little room and the cover protects the food from dust and sand when cooking outdoors. It also keeps the food warm on a windy day. The cover can also be used as a plate. This will be part of the regular equipment of the Auto-Kamp-Kook Kit.

### A PRIZE AUTO ACCESSORY WINDOW TRIM

During the last Christmas season the Times Square Auto Supply Co., with branches all over the United States, held a contest for the best window trim among its various stores and branches. The handsome loving cup, which was offered as a prize, was won by the Dallas, Texas branch, and herewith is the winning window display.

For the benefit of hardware dealers who find profit and possibilities in adequately handling automobile accessories, we are glad to be able to reproduce this window trim in the *HARDWARE WORLD*. That there should be rivalry or a feeling of antagonism between auto supply houses proper and hardware dealers handling auto accessories is petty and harmful to the best interests of the trade.

Merchants in all lines find their greatest success in taking suggestions and profiting by the experience and progress of others. The merchant who has given study to the display and merchandising of automobile accessories does much to teach and show the other merchants, who are undertaking that same line of work.

## If You Want the Best

**I**F you want your customers to have the best that the market affords, you will be more than interested in the Auto - Kamp-Kook-Kit.

# KAMP *Auto* KOOK KITS

Two Burner Kit Closed. All Equipment Packed Inside

One Burner Kit Open

Four Part Suit Case Outfit

It has so many features which are found in no other stove that it is really in a class by itself. No other camp stove will be so well advertised. Every prominent outdoor publication will carry double spreads, color pages and full page ads throughout the season.

All indications point to an exceptional season. The biggest advertising campaign ever launched for a camp stove is going to bring customers into your store for this better stove. They sell quickly—profits are exceptional. Do not fail to write or wire today for our special proposition.

**Prentiss - Wabers Stove Co.**  
18 Spring Street      Grand Rapids, Wisconsin

## Intensified Light—with “glare” eliminated

**Y**OU absolutely cannot get side “glare” from the **RAYDEX Shaftlight**. All the scattered, divergent rays which ordinarily cause “glare” are gathered together and concentrated into one penetrating **shaft** of light, greatly intensified by the polished metal reflecting surfaces of the thousands of honeycombed cells which also eliminate the “glare.”

This piercing **shaft** of light picks out distinctly whatever comes within its far-reaching range.

The **RAYDEX Shaftlight** is handsomely and substantially

built entirely of silver, aluminum and brass, is gracefully designed, and adds **distinction** to any car. Rattle-proof and durable. Rain-proof—dust-proof—rust-proof.

Universal bracket fits any make or type of car, without special fittings. No nuts or bolts to interfere with wind-shield operation.

No need for dealers to stock a variety of brackets. Write for circular and our attractive proposition. Order a sample.

**Raydex Manufacturing Co., Brackenridge, Pa.**

Sales Dept.: Charles F. U. Kelly, Inc. - - - 1834 Broadway, New York

# RAYDEX

**F**ORD owners are **demanding RAYDEX Reliners** for their transmission bands.

**RAYDEX Reliners** are equally popular with dealers and garage-men. Work is simplified. Relining jobs pass through the shop with greater speed. Customers are better satisfied. Profits grow rapidly, for a big demand exists and the market is almost infinite.

Renewing the lining on Ford Transmission Bands has heretofore been a mean, tedious job. It has meant taking off the transmission cover, disconnecting the exhaust pipe and—in the new Ford models—removing the self-starter, electrical connections and gears, etc.,

in order to reach and remove the transmission bands.

Once **RAYDEX** is installed, relining is reduced to these four simple operations—

1. Remove **hand-plate** (only) of transmission cover.
2. Pull out pedal.
3. Slip **RAYDEX Reliner** between original Ford band and transmission drum.
4. Secure **RAYDEX Reliner** to original Ford band by re-inserting pedal.

**No bigger or more promising opportunity for distributors and dealers has ever been offered.**

**Send for literature. Order a sample set.**

**Radex Manufacturing Co., Brackenridge, Pa.**

## AUTO CURTAIN LIGHTS

### Bow Sockets, Snap Fasteners Forgings, Stampings, Etc.

Our Improved Pioneer Automobile Curtain Lights dress up any car; many otherwise good appearing cars have been disfigured by the use of cheap looking stitched-in celluloid lights which soon turn yellow, become smeared and brittle and then break—a constant eyesore ever after; but with these Pioneer polished, bevelled plate

glass lights, handsomely framed, and in a variety of styles, sizes and finishes, enabling anyone to secure a perfect harmony with the individual design of any car, and which cannot get shabby looking, as they are so easily washed, the result is a permanently neat, distinctive and fashionable car. And so constructed that they will not give way, yet they are extremely light and require no extra top lining.

#### Number 144 Radiator Clip

This is the season when Hood and Radiator covers are in demand; therefore great interest in this clip. It is made from No. 24 gauge steel; length  $4\frac{1}{2}$  in., width  $\frac{1}{2}$  in. Furnished black enameled, complete with Back Plate.

Priced by the hundred.

#### WINDSHIELD CLAMP Number 140

Features: A substantial thumb screw or bolt, giving security when clamped to stub on Windshield frame.  $\frac{1}{4}$ -in. Socket Hole, offset  $\frac{1}{4}$  in. from base that rests on wood bow to center of socket. Slot screw hole, permitting of a side adjustment without changing screws if necessary to adjust.

#### Number 143 Back Stay

A secure and practical means of attaching the stay strap to the body of the car. The roller feature permits of ease in adjustment of stay strap and eliminates wear on same.

Slot for One-inch Web. Black enameled. Sold by the hundred.

## NON-SHATTERABLE GLASS

One of the industrial developments of the war was the manufacture of non-shatterable glass.

Automobiles were largely used in the war to transport officers from place to place, frequently under fire.

Rifle balls, shrapnel bullets and pieces of shell would strike windshields, and, while the missile itself might not strike the occupants of a car, they would be struck and more or less seriously injured by flying pieces of glass.

Windshields were also often broken in collisions or by striking obstructions in the dark, for the machines had to be driven without lights, both at the front and for many miles behind it.

Non-shatterable glass is made of two thicknesses of glass, between which is inserted a piece of transparent sheeting material—in fact, the same or very similar to that used for windows in all types of open cars.

In making the glass, the hydraulic press is used. The two thicknesses of glass and the transparent sheet of py-ral-in are inserted between two heated plates. Transparent cement is first applied to hold the three parts firmly together and the product is made into a solid mass. In the process, the glass loses practically none of its natural strength or transparency.

Since the war, taxicab companies have been the first to see the desirability of using non-shatterable glass windshields. This is because many taxicab drivers are more or less irresponsible and reckless, and taxicab companies are responsible for injuries to passengers while in their cars.

Non-shatterable glass windshields and windows will doubtless be adopted sooner or later for private passenger cars, as a safety-first measure.

The glass is as transparent as ordinary plate glass, is claimed to be 50 per cent stronger, and because of its excellent heat insulating qualities does not accumulate a coating of frost except at very low temperatures.

## INDIA IS TO DOUBLE OUTPUT

With the announcement of a 40 per cent stock dividend, comes the news that The India Tire & Rubber Co., of Akron, will more than double its production of tires in 1920. More factory space is now being added to the present plant and ground will soon be broken for a new factory building which will be completed before the end of this year. The India company, which was organized as recently as 1917, is pointed out as one of Akron's remarkable instances of great industrial growth achieved on a relatively small capitalization.

D. A. Grubb, Secretary and General Sales Manager of the company, is given much credit for India success. A sales executive of more than 20 years of experience, he explains that he has operated India affairs on the proved theory that a quality product is best marketed on a fair profit and quick sale basis.

The Wambem Hardware Store at Pablo, Montana, has been sold to Dr. Clark and Charles Fox.

## If One-Half the Dealers Knew

The real facts of how they could supply a modern Spring Bar Bumper of double strength for EVERY car desired—front and rear,

**An Output Ten Times Larger**

Couldn't Fill the Demand.

## New Era "Better" Spring Bumper

is a positive evolution of merit in several points.

**Its Double Bars Mean Double Strength.**

Interchangeable for ALL cars by detachable arms, furnished for every car—front or REAR—and freely exchanged for any car desired.

The most complete catalog, showing arms for EVERY car—front and rear—will EARN HUNDREDS of dollars for any dealer. If your jobber won't furnish Spring Bar Bumpers with the name "New Era" and patent dates, between the double bars, ask us the name of nearest jobber. The catalog also shows "BETTER" Springs and Tire Carriers for all cars.

## WHO AM I?

I am the ruler of retail reverses.  
I am the Lord High Potentate of Failure.  
I am the reason for that downward slant on  
your profit curve.  
I am the cause of the silent sickness that  
stills your cash register bell.  
I am the origin of dissatisfied customers and  
loss of trade.  
I am the element of chance that turns a win-  
ning business into a losing gamble.  
I am the fountain head whence springs the  
majority of your troubles and worries.  
I am the key to the problem why more than  
15,000 retailers fail every year.  
I am the why and the wherefore, the direct  
and proximate cause, the germ and the genesis  
of successful merchandising.  
I am the Sticker, Shelf-Lounger, the Left-  
Over, the nameless child of an unknown father.  
I am the unadvertised product!

## AMERICAN GRINDER MFG. CO. EXPANDS

The phenomenal growth of the American Grinder Company's wrench business has made it necessary to recapitalize this concern that production may extend to fill the demand for Blackhawk Steel Socket Wrenches for automotive use. Thus it is that Messrs. Herbert, Herman and George Brumder, bankers, have, with the Messrs. George, Adam and Fred Mayer, owners of the F. Mayer Boot & Shoe Co., become affiliated with the makers of Blackhawk wrenches, whose plant is located at Milwaukee. Herbert Brumder takes the office of treasurer.

The leading automotive publications are to carry, in the near future, interesting full page announcements of an innovation in the manufacture of Blackhawk Wrenches, a feature that is exclusive and brings this well-known tool as close to perfection as modern methods can make it.

Sales of Blackhawk Wrenches are in the hands of C. N. & F. W. Jonas, widely known sales organization, with headquarters at Chicago and branches at Los Angeles, Seattle, San Francisco, Dallas, New York and Atlanta. C. N. & F. W. Jonas sell the company's line of American hand and power grinders west of the Mississippi. East of the river, sales of these machines are made by John H. Graham & Co., who are also responsible for the foreign sales of Blackhawk Wrenches.

## GTD HELIX ISSUED FOR TRADE

The Greenfield Tap and Die Corporation of Greenfield, Mass., is issuing a new national or exterior House Organ, entitled "The GTD Helix."

An employees' edition has been published for two years, which has met with universal approval on the excellence of its make-up and contents.

For some time the GTD Corporation has felt the need of a publication more national in scope—hence the new "GTD Helix." The name "Helix," which means "the path of a true screw thread," is a particularly fortunate choice in view of the firm's products—tools for cutting and gauging screw threads.

The new magazine is a convenient size, 4½ by 5¾, and the cover is very attractively and strikingly laid out in colors—the principal design representing a screw thread as seen inside a nut or tapped hole—the path of the thread or "Helix" bringing the reader's eye down to the feature item for the month. Besides the editorials there will be a section devoted to dealer's service, which will be appreciated by the trade.

## The Efficiency Cotter

This Is an Age of Specialists

When sick, you consult that physician with special training on your particular ailment. He is a specialist.

When you want a man to handle a new line, you choose carefully, and select one with more than ordinary knowledge of the merchandise. He is a specialist.

When your Flivver refuses to go another foot you call up one of Mr. Ford's assistants. Another specialist.

## Push Auto Accessories Now

**N**OW that roads all over the country are getting into condition, the weather settled, motorists are again planning weekend or longer trips. This, then, is the season for the hardware man to plan methods of increasing his sales of these lines. It is well to give wide publicity to the fact that you handle tires, for they are undoubtedly the greatest staple of the autoist, and if he gets into the habit of coming to a certain store for tires, he will have a chance to see all the other accessories carried.

### Successful Merchants' Methods

E. C. Peck, San Bernadino, is a firm believer in the power of an attractive window display, and recently installed such a colorful exhibit that all who passed involuntarily stopped to gaze. The rear wall was painted a vivid blue, shading into green, and over it was hung waterfalls of orange hued paper. The electric lights in the window were encased in orange paper shades. Placed on a platform covered with green cloth were three tires and above them a row of huge cardboard oranges with features painted on them. Tapes ran from their eyes to the tires and a card advised "All eyes are on Monarch tires." Another window advertised automobile tools of all kinds.

They compiled a little book, which they mailed to all car owners in the county. It was entitled "How to Repair Your Automobile," and with it was sent a short letter that pointed out the advantage to the owner of having a set of repairing tools on hand, and listed their stock of repair parts, as well as their facilities for getting out-of-the-ordinary supplies. The manager advised that this had proved one of their most effective modes of advertising, and that for months after the distribution men would come into the store and inquire for one of the

tools listed in the book, remarking at the time, "I never knew there was such a convenient little repair tool."

### Learn From Others

The variety stores can often give the dealers in more substantial merchandise ideas for exploiting their lines. There is nothing more convenient for temporary repairs than one of the rubber patch outfits, and Woolworth in their Fifth Avenue store recently showed this very effectively. In the foreground was a large tire, showing how several punctures had been stopped by means of the convenient little patch. Here, too, were shown rubbers, hot water bottles, rubber gloves and syringes—all repaired by the same method. Down in front were shown a number of the repair kits, with a card:

### FOREWARNED IS FOREARMED

Guard against your pleasure trip being marred by a punctured tire, or a rubber bottle that has sprung a leak, by investing in one of these  
**RUBBER PATCH OUTFITS**

A supply dealer in Portland, Ore., adopted a striking method of gaining public attention. Right through the center of their window appeared to be thrown a rubber tire. A portion of the tire could be seen projecting through the splintered glass, and a mass of broken glass was on the pavement in front of the window. In order to prevent any accident, this space was roped off in regulation fashion. The effect was gained by cutting the tire and cementing one portion to the inside and the other to the outside of the window. Long jagged lines were then drawn on the glass with soap, extending from the part through which the tire was supposed to be thrown—and so close was the simulation that one had to step right up to the win-

# THE ROMORT AIR STATION

## MAKES 'EM STOP AT YOUR STORE

Acting like a powerful magnet the new Romort air and water station attracts car owners and drivers from miles around. All of which means more sales, more business and more profits in your accessory and supply department.

### NEW METHODS SUPPLANT THE OLD

The new Romort air and water station does away entirely with the dirty, grimy and usually broken curbstone air hose and the bothersome old water bucket.

### SUPERIORITY OF THE ROMORT

With the new Romort air and water station, the hinged air pipe automatically returns to a vertical position after using and holds the air hose clear of the ground at all times.

The flexible wire armor on the hinged air pipe and the automatic tire valve prevent kinks, breaks on short bends in the hose, and there are no joints to leak, as there is one continuous hose from the tire valve to the base of the stand.

### IT PAYS TO ADVERTISE

With its electrically lighted globe, it is on the job 24 hours a day; a constant reminder of your service to the motorist. It is by far the most effective advertising that you can buy.

### BUILT IN TWO STYLES

No. 11 Romort Air Station.

No. 12 Romort Air Station with Water

dow to convince himself that the window was not actually broken. Supplementing the effect thus gained, there was installed in the window a good display of tires and auto accessories, with a card: "The sale of our tires is breaking all records."

Another convenience that can be featured to good advantage is the glareless lens. The Bagnard Hardware Co., Pasadena, had an announcement in the local papers recently:

**DON'T DEFY THE LAW!**

The Glareless Headlight Ordinance Is in Effect NOW.

It provides severe penalties for the use of headlight lenses that conflict with its provisions.

**BLANK LENSES**

are sold with the positive guarantee that they comply with the state law. They provide safe light and add to the appearance of any car.

We install them free of charge.

Fastened to the window was a clipping taken from one of the daily papers: "Headlight Law Must Be Obeyed." The article went on to state that owing to the number of accidents caused by glaring headlights, fines would no longer be imposed, but that car owners violating the law would be given jail sentences. At one side of the window was placed a cardboard jail, with a man looking out of the window, and at the other, on a mound of velvet, several no-glare lenses. A card between them, with ribbons running to each, observed: "Avoid this by using this."

One of the best examples of timely advertising along auto supply lines was that just run by the Auto Department of Hamburgers, Los Angeles. An ordinance has just gone into effect, prohibiting the parking of autos within a prescribed business area. This causes some inconvenience to those who come in town with their cars, so Hamburgers advised:

"You can park your car near Hamburgers."

Then followed a cut of a map of the business section of Los Angeles, showing the prescribed area, and showing that one could park his car within a block of the Hamburger store. In this way they secured much trade that ordinarily went elsewhere, since autoists naturally prefer to go to a place where they had the least distance to walk. In the auto supply department they had the different supplies displayed in cases, and piled behind each case a number of these same accessories boxed, wrapped and tied, with little wooden handles inserted, making it convenient for purchasers to carry them.

It is such little conveniences as these that attract and hold trade and the hardware man who wants to increase his business will do well to carefully consider all of the suggestions herein made.

It takes a lot more courage to deny ourselves the thing we really want but do not actually need, than to go ahead and purchase it, trusting to luck to be able to pay.

To erase a problem from the slate never solves it; to turn one's back on, or to shut one's eyes to a perplexing situation, never helps. The only way a brave man sees is to march straight ahead, eyes to the front and ready to meet and to make the best of the situation as it is.

These are trying days—days of uncertainty—days when we must hold fast and be ready to make the most of every hour; ready to exercise our influence and effort in behalf of good government, true democracy and the strong rebuttal of Bolshevik encroachments.

McLemore & Adams have purchased property at London, Kentucky, and will erect a modern store building.

The hardware and implement business of W. & F. Kronbruch at Culbertson, Nebraska, has been taken over by Hill & Wagner.

The Nelson Implement Company at Culbertson, Montana, have increased their business by the purchase of Tanner & Best of the same place.

The Appert Hardware & Implement Company has been incorporated at St. Cloud, Minnesota. The forces are A. A. Appert, Celestine Appert and J. H. Betten-dorf.

C. A. Stephens and Thompson & Kelly, both progressive merchants at Columbus, Iowa, have combined forces. Mr. Stephens has moved his stock into the building formerly occupied by Thompson & Kelly.

The Lamar Hardware & Furniture Company has been incorporated at Lamar, Oklahoma, with a capital stock of \$12,000, by J. E. Summers, I. S. White and B. C. Robinson. They will carry a line of automobile accessories, household furnishings, besides a straight hardware line.

R. A. Babb has leased two buildings adjoining his hardware store at Eugene, Oregon. When the two new interiors are thrown into his present available store space, he will have one of the largest hardware stores in his vicinity, allowing for a larger stock and a better arrangement of it.

**SERVICE AND CO-OPERATION MAKE THE  
"HARDWARE WORLD" PRE-EMINENT**

Due to the service which you are rendering both through your publication and by correspondence, we feel we owe you an expression of thanks, for through your publication we are able to obtain many new ideas from each issue, and through your correspondence we have found you a ready worker to co-operate with us in any problems we may have.

Kindly accept our very best wishes for a very prosperous year and feel at liberty to call upon us for any information we may be able to give you at any time. Yours very truly,

Oregon

Others up to \$10

Trout Leaders, each .....10c to 75c  
Silk Enameled Lines, per coil.....50c to \$7.50

"Tye" Eggs and "Tye" Egg Hooks, Rubber  
Boots, Socks, Camp Grates, Cook Stoves and  
Equipment, Flashlights in all sizes and styles.

#### COME IN AND ASK OUR SALESMEN

about the best places at which to fish this season. We make special efforts to obtain all possible advance information as to where you will be liable to make the best catch. You will find our salesmen are pleasant, congenial fellows, who are always ready to talk "fishing" whether you make a purchase or not. You are welcome to their tips.

#### FISHING LICENSES ISSUED

## Chas. Brown & Sons

871-873 Market St., Opp. Powell  
Established 62 Years

Practically every hardware merchant handles sporting goods and fishing tackle. Here is a timely advertisement issued at the beginning of the fishing season by Chas. Brown & Son, whose enterprise and progressiveness is second to none in the West.

They are planning to go after the fishing trade in earnest, recognizing the trade of the sportsman is well worth catering to, for a man planning a fishing or camping outfit generally wants the best that can be had. He takes a pride in his outfit, aside from that he is appreciative of information, especially as to the best places to fish.

There are suggestions in this advertisement that merchants everywhere can use to advantage.

### NEW GOLD MEDAL SALES HELPS

Another wide-awake selling help has been issued by the Gold Medal Camp Furniture Company, at Racine, Wisconsin, for the benefit of its dealers. Illustrated are schemes for cut-outs and window and counter displays, furnished by the company, descriptions of slides for motion picture houses, store signs, electrotypes and halftones in illustration of the company's stock. Any of these will be furnished to the dealer on application.

The Dealers Service Department is one of the principal features of the company's selling policy. Any wide-awake dealer who handles sporting goods should inquire into the stock and the sales policy of the Gold Medal Camp Furniture Company.

J. N. Taylor has engaged in the hardware and plumbing business at Carthage, Missouri.

### RICHARDS-WILCOX CATALOG

Distinctive Garage Hardware is the title of the Richards Wilcox new catalog and we are very fortunate in being able to reproduce the cover of this catalog herewith. The book contains 96 pages, 8½x11 inches in size, and is one of the clearest and fullest presentations of garage door hardware that has ever been given to the trade. It is printed in two colors, and each set of hardware is illustrated by half-tone cuts, showing actual installations, as well as diagrams and cross sections.

Copy of Distinctive Garage Door Hardware will be mailed to anyone interested on application for catalog A-22 by the Richards Wilcox Mfg. Co., Aurora, Illinois.

The Triangle Lumber & Hardware Company has organized at Dexter, New Mexico. The new firm has a capital stock of \$25,000 and will specialize in manufactured goods, lumber and hardware.

The Live Hardware Company at South Pasadena, California, have added a sheet metal department, so they will be prepared to make repairs of every kind for the household in this community.

The Brawley Hardware Company at Brawley, California, is erecting a thoroughly modern concrete building, two stories high, with a mezzanine floor or balcony on the inside and double show windows.

F. M. Power and N. W. Williams have recently incorporated at Chehalis, Washington. With a \$25,000 capitalization, the new Company is set for the success that comes with enterprise and experience.

R. J. Stone & Company have been reorganized at Tonasket, Washington, with a capital stock of \$25,000. One of the features of the reorganization is the addition of a hardware department to the general business.

The Dickinson Hardware Company at Colorado Springs, Colorado, have found it necessary to move their stock in order to handle their business. Fortunately it was only necessary for them to move across the street to secure the necessary accommodations.

## Farmers and Owners of Cars are Prospects

**Y**OU who have in the past handled vehicles and wagons and have lost that profitable trade to the Motor Vehicle, are in a position to get the old volume and more back in handling "Utility Trailers" and without the necessity of giving service or having an expensive service department as is required where you sell motorized vehicles.

Every farmer in your community is a prospect for a Utility Trailer of some sort. Every motor truck running over your highways is necessarily a prospect for a Utility Trailer, if he is to compete with others using them, they bring truck operating cost down to a point where the profits are satisfactory, and truck operating brought out of the Red Ink.

Utility Trailers are motorless auxiliaries to the truck or passenger automobile, bringing you a clean profit when sold and a profit that is yours, not to be later paid out in shop costs of free service as in motorized vehicles.

We have some good territory open, write us for our proposition to dealers.

**UTILITY TRAILER SALES CO., of Southwest**  
1302 Young St., Dallas, Texas

**LOS ANGELES TRAILER CO.,**  
1328 Palmetto St., Los Angeles, Cal.

## \$6,000 out of one small showcase in two years

*How one dealer has made his store razor headquarters*

AutoStrop Razors sell themselves when the salesman knows how to demonstrate them. Show the customer how a touch of the thumb adjusts the blade for a close or a medium shave, how the blade can be wiped dry without removing it from the frame. A demonstration goes a long way toward clinching the sale.

THE P. C. De Vol Hardware Company of Council Bluffs, Iowa, has averaged more than \$3,000 a year for the last two years—selling \$5.00 safety razors. More than 1200 AutoStrop Razors have passed over their showcase since that day two years ago when they decided to apply a brand new selling plan to their retail business.

In the past two years, the De Vol Company have sold AutoStrop Razors by mail in fifty-three different towns, in Iowa, Missouri, and Nebraska, to people who could have bought these razors right in their own town—but didn't.

Just what is it that makes people criticise one store, while they go out of their way to trade in another? The answer can be given in two words—*Store personality*.

### *The secret of retail success*

Stores have a personality just as people have. When a store has a *pleasing* personality, business comes—if not, business goes to competitors. And store personality is based on just one thing—*service*.

The De Vol Company's method is simplicity itself. They standardize on nationally advertised, fast-selling lines that mean rapid turnover and quick profits. They concentrate on those items that they believe in, can enthuse over, stand back of, fight for if need be.

But just being enthusiastic about any product will not of itself produce sales—you have got to *demonstrate* to anybody and everybody on every possible occasion.

One of the best methods of selling the AutoStrop Razor is to get the customer himself to strop the razor. Let the customer slip the strop through the razor head — let him give the razor a few strokes on the strop — in short let him see for himself how easy it is to have a "new" keen edge for every shave.

### *The selling power of a real demonstration*

No matter what a man comes into the store to buy, the De Vol salesman leads the talk around to shaving economy and the AutoStrop Razor—then for a real demonstration. The customer is shown just how the AutoStrop Razor strops itself—just how it is adjusted instantly for a medium or a close shave—how easy it is to insert a blade, when a new one is desired.

Then follows the most important part of the demonstration — *the salesman gets the customer to handle the razor and strop it himself.* Nine out of ten men are immediately interested.

The De Vol Hardware Company can point to many

cases where the sale of an AutoStrop Razor has made the buyer their regular customer for everything in the hardware line.

They recall the case of the AutoStrop Razor which pleased the customer so much that he came back a few days later and bought a \$65 refrigerator.

Dealers everywhere are doing more with their razor showcase than ever — selling four AutoStrop Razors where they formerly sold one.

Write for information about our free merchandising service and special selling assistance. We can help you to duplicate the success you have just read about.

**AUTOSTROP SAFETY RAZOR CO.**  
New York      Toronto      Paris

## AutoStrop Razor *sharpens itself*

**320 newspapers are carrying the story of the AutoStrop Razor to every locality in the United States**

Special advertising, the most effective we have ever run, will reach a total of 20,000,000 live up-to-the-minute newspaper readers. The selling appeal in these advertisements has been tested and proved. In 1919 this same kind of advertising *trebled* the business. And it is working more wonders this year.

**A magazine circulation of another 4,500,000**

44 big advertisements, some of them two-page ads, every one tested, are running in such big national magazines, as Literary Digest, Collier's, American Magazine, The Red Book, Cosmopolitan, Life, and the American Legion Weekly — all men's magazines of big pulling power.

There never was an AutoStrop campaign so comprehensive as this. We are pushing right ahead — will you be with us?

**SERVICE QUESTIONNAIRE**

NAPIER SAW WORKS, INC., SPRINGFIELD, MASS.

Agent's Name \_\_\_\_\_

**TYPICAL NAPIER HACK SAW SERVICE**

Typical of the service of the Napier Hack Saw Works of Springfield, Massachusetts, in distributing its hack saws is the Service Questionnaire, which is sent by the company to all distributors and dealers of Napier Hack Saws. In this way, any complaint or dissatisfaction comes immediately before the notice of the company in a friendly and businesslike way. Not only is the complaint received, but full details, such as date of shipment, and exact nature of the complaint and circumstances surrounding any apparent shortcoming in the saw blade.

It seems to us that such a blank form from a service department is guarantee enough of the quality of the product and the spirit of fair trade and "satisfaction guaranteed," which the Napier Saw Works stands for. It is the intention of the company that when any distributor or dealer sells Napier Saw Blades, he sells more than the actual goods he sold, for he has produced more and better work and satisfaction for the buyer and the user.

Two brands of blades are made by the company. Expert Blades for hand use only are carbon steel blades made of special high grade crucible tool steel, in two styles—All-Hard and Flexible, and in all standard dimensions and pitches. Quality Blades are for hand and power use, of tungsten steel, a blade of exceptional hardness and toughness. They are made of the finest material obtainable for cutting extra hard metals, such as high speed and unannealed steels. Quality Blades are also made in All-Hard and Flexible types in a full range of standard dimensions and pitches.

The Napier Saw Works, Inc., are located at Springfield, Massachusetts, where the main offices of the company are also located. The company maintains its western branch at 320 Market Street, San Francisco, where Chas. A. Dowd is in general charge. Other factory branches are maintained at Chicago, Illinois, and London, England.

**NEW BIG 3 FURNACE BOOKLET**

The Big 3 Mueller Pipeless Furnace is admirably and fittingly described and illustrated in the new 30-page, two-color booklet, which has just been published by the Mueller Furnace Co. for the information and sales help of the trade. The Mueller Furnace Co. was established at Milwaukee, Wis., in 1857. For sixty-three years it has been making heating systems of all types. It is one of the largest and most completely equipped institutions of its kind in the country with an experience covering warm air, steam, vapor, vacuum and hot water heating in all their phases.

More than 166,000 buildings are now Mueller heated. The Mueller Big 3 Pipeless Furnace is the outgrowth of this vast experience, scientifically adapted to pipeless or one register heating from the old Mueller line of warm air pipe furnaces. The operation of the furnace is described in detail in the new booklet, as well as its construction and the details of its installation.

The furnaces are made with both single and double door, varying in size of the fire pot from 18 inches diameter to 27 inches diameter. The smaller furnaces will heat a four or six room house, or an auditorium of a capacity of from 8,000 to 12,000 cubic feet. The largest furnace will heat a twelve to eighteen room house or an auditorium with a capacity of 34,000 to 48,000 cubic feet.

The company's guarantee is explained. This is issued in writing and provides that the furnace will heat every room in the building where installed to a comfortable temperature. If the furnace does not meet the terms of the guarantee it will be replaced, or at the option of the purchaser it will be removed and the purchase price refunded. Copies of the booklet may be obtained from the offices of the company, or from any of its distributors, as mentioned elsewhere in these pages.

**STOVE PATENT CENTRALIZES FLAME**

A late improvement in gas stove construction has been patented by W. E. Jordan, Vice President of American Beauty Stove Company, Erie, Pa. It permits the use of such small vessels as percolators, centrally located over any burner. This eliminates waste of gas, also risk of spilling contents and melting off handles and spouts.

The American Beauty Stove Company is building a fire-proof addition to the plant, which will add considerably to the capacity. An up-to-date outfit for ebonizing stove castings will be a part of the equipment.

**JOE HAYES—FURNACE SPECIALIST**

Joe Hays, long a member of the western hardware trade, has become a stove and furnace specialist, with offices at 611 Spreckles Building, San Francisco. Among the lines he handles for the western territory are the Mahoning Foundry Co., Youngstown, Ohio; Lincoln Stove Co., Fremont, Ohio; the Donald B. Howard Co., Des Moines, Iowa.

The John T. Little Hardware Co., of Spokane, Washington, has remodeled the store on Washington Street to provide increased space.

The Oliver Rickard Company at Centralia, Washington, has been reorganized and strengthened by the entrance of L. G. and G. G. Goranson into the firm.

Utter & Dunsmore Hardware Company has been established at Long Island, Kansas, where they will handle a full line of automobile accessories, sporting goods, household goods, paint, oils and general specialties and novelties.

## Teaching American Boys to Buy Good Tools

**M**ANUAL training courses in our schools are teaching boys and young men how to do good work with tools.

These boys, as a result, are coming to appreciate good tools more than ever. They make up a class of tool-buyers that it is distinctly worthwhile to cultivate.

We are telling these young amateur carpenters and woodworkers about the quality of Disston Saws and Tools.

To do this, we are using the magazines to which they look for information on mechanical subjects—"Popular Mechanics," "Popular

Science Monthly," "Scientific American," and "Industrial Arts." We send the Disston message to more than three-quarters of a million readers of magazines of this kind. The exact number of subscribers is 781,067. These boys constitute by no means a small market for sales of quality saws and tools.

Telling this market the story of Disston Saws and Tools is another instance of our thorough cultivation of all classes of buyers to increase public demand for high-grade saws and tools.

Next month we will tell you how we reach another class of tool-buyers—the "handy man around the house."

Disston Saws and Tools are constantly advertised in magazines and agricultural publications with a total circulation of 8,497,008 copies each issue.

## GET YOUR SHARE OF FAMILY TRAPSHOOTING SALES

**O**UR steadily increasing sales of the Winchester Junior Trapshooting Outfit to dealers, indicates a booming consumer demand.

Are you prepared to fill orders from the substantial citizens who will be your customers for this already popular Outfit?

Not only are more dealers making money on this Winchester Outfit, but many old dealers show briskly increasing profits from their general line of Winchester Guns and Ammunition. These bigger profits are in numerous cases traceable to a new interest in shooting created by the original sale of the Winchester Junior Trapshooting Outfit.

These records prove that the sales possibilities of the Winchester Junior Trapshooting Outfit are often limited only by the individual dealer's efforts to get behind it.

The same care in workmanship, the same quality of materials, that have made Winchester Guns and Ammunition known as the "World Standard," go into the Winchester Junior Trapshooting Outfit.

## BIG ADVERTISING IN BIG MAGAZINES WILL HELP YOU

**B**ESIDES this high quality and the pleasure of family trapshooting which result in "word-of-mouth" advertising by Winchester Junior Trapshooting Outfit owners, a national advertising campaign is acquainting people with the pleasure derived from the new sport.

The Winchester Repeating Arms Company is doing something that has never been done before: It is interesting the whole family in trapshooting.

This advertising will reach its peak at the beginning of the vacation season, in National Weeklies, National Farm Papers, and Sporting Magazines.

Every member of the family is a possible customer for the Winchester Junior Trapshooting Outfit. It is a trade-builder and profit-maker you should be cashing in on. Are you fully awake to this?

Write us and get your share of this new business.

### AUTO STROP NOT IN COMBINE

N. B. Maas vice president of the AutoStrop Company, has set forth to the trade in his statement, in which he emphatically denied that his company has any connection with any other company in the safety razor trade, or with any combine of safety razor companies. In his own words:

"Neither this company nor any of the controlling stockholders have bought, sold or combined in whole, or in part, with any individual or any other company."

This emphatic statement by Mr. Maas came in comment on part of an address by Major George W. Simmons before one of the eastern hardware conventions recently. Major Simmons was speaking on the new Winchester plan, as he interprets its effect on the trade, and he merely stated that he understood that the AutoStrop Company was one of the safety razor organizations in which Mr. Whelan of the Winchester Company was interested.

### SAFETY LOCK SPECIALTY

In this era of increasingly free social thought, which results so generally in burglary and violence in the obtaining of property, the enterprising merchant will do well to feature such a specialty as the Marchant Safety Lock, announcement of which appears on another page of this issue. This safety lock is said to sell on sight, and it is really a necessity in every home. It is manufactured by the R. H. Marchant Co. at Oakland, California, and distributed through the Graf Sales Co. of San Francisco.

### NEW CUSTOMERS THROUGH HOUSE ORGAN

Following is a little news item coming from Blodgett's Store News, at Spokane, Washington, which gives some idea of the enterprise and good service of the Blodgett Mercantile Company, as well as indicating some of the benefits and advantages of such a house organ as Blodgett's Store News.

The store paper has grown from a leaf at the beginning until now it is a 12 page magazine, published monthly. In it are advertisements of various specialties and goods carried by the store, local news, cartoons and items of a general nature to both the buyer and seller. The editorial page is devoted to the interests of the store, the customers and of the community. It is perhaps a coincidence that the subscription price of Blodgett's Store News is the same as that of the *HARDWARE WORLD*, only fifty cents a year.

### TO THOSE WHO ARE NOT OUR CUSTOMERS

Dear Friends and Neighbors:

"We have been sending our little magazine to you once a month. We have been sending it to you because we wanted to become better acquainted with you. Because we wanted you to know us, about our store and what we had here for you. Because we want to make our store your store, your place to trade, your business home.

"Our paper is our invitation to you to try us, to try our merchandise, to try our service, and see if we can fulfill them in a way that will be more than satisfactory to you. We want your business, we are trying our best to get it. We have a wonderful assortment of high grade merchandise here. Visit our store; let's get acquainted so we will know each other better. Give us a chance to please you; we believe we can make good."

John Curtis of 1623½ Central Avenue, Los Angeles, California, is one of the big hearts and strong hands in the plumbing trade of Southern California. He is an active and enterprising plumber in Southern California, and speaking pleasantly of the *HARDWARE WORLD*, he writes as follows:

"I appreciate the *HARDWARE WORLD* very much and it is a source of pleasure and learning to me always."

### SOUTHERN CALIFORNIA MEETING

The southern division of the California Retail Hardware & Implement Association held its annual convention at Long Beach on Wednesday, April 21. Although the reading pages of the *HARDWARE WORLD* went to press before reports of the convention could be secured, all indications pointed to the biggest convention ever held in Southern California. The Hotel Virginia was the convention headquarters and open house was proclaimed for the visiting members.

The program for the day was divided into three parts. The morning was reserved for a meeting of the Executive Committee and the reports of the officers and committees, which constitute the business of the convention. The afternoon session was devoted to the discussion of important hardware subjects and talks of men prominently connected with the industry. At the conclusion of the afternoon, new officers were elected for the following year.

A feature banquet was planned for the evening, with entertainment, feature addresses, music and dancing.

The present officers of the southern division are as follows: President, W. J. Reid, Los Angeles; vice president, J. R. Westbrook, Riverside; vice president, Thos. M. George, Santa Barbara, and J. Glenn Marks, Los Angeles.

### DEATH TAKES PIONEER WIRE MAN

It is with great sorrow that the Ludlow-Saylor Wire Company informs us of the death of Zear J. Chamberlain, one of the oldest and most valued employes of the concern and well known to the trade from coast to coast. Mr. Chamberlain died suddenly last month, in his 45th year. He had been with the Ludlow-Saylor Wire Company at its St. Louis factory continuously since he was seventeen years old, and was rounding out his 28th year there.

### THE MOST TIMELY BOOK

The editor who deals in superlatives is playing with fire, but we feel reasonably safe in thus announcing to the trade, the latest addition to its literature in Robt. H. Ingersoll & Bros.' new book. The publishers call it "Time Telling Through the Ages," and it is perhaps the most ambitious and finely put together contribution to the literature of the trade that has been made for many a year. The volume has been published as part of the celebration of the twenty-fifth anniversary of Robt. H. Ingersoll & Bros. as watch makers. The story of time telling from the earliest times through all the ages was carefully investigated and compiled. Beautiful illustrations of early methods and historic clocks and time pieces are included.

The history of the watch and clock industry is carefully and impartially recorded. In fact, so great was the merit of the material and its treatment that a great publishing house found the volume worthy of publishing strictly on its own merits and it will be sold to the reading public at \$3.00 a copy. The book is most beautifully published and illustrated and surely here is romance—the romance of actual accomplishment and applied energy.

### IOWA'S LEADING TRAP SHOOTER

In his first season as a professional trapshooter, J. R. Jahn of Long Grove, Iowa, has made a .9755, made on 5810 targets. This leaves him tied for second high average among professional shooters, and with the highest season's average ever made by a professional for the state of Iowa.

Mr. Jahn was formerly a sportsman in the strictly amateur class, who used to spend his Saturday afternoons whanging away at the clay target for fun, but he has become a professional and represents the Hercules Powder Co. in his own territory.

## PROUD WAR RECORD OF THE COLT

Ask any returned soldier who saw active service in France to tell you the story of the war as he saw it, and it will not be long before he is giving you a demonstration of how he got out of this or that thrilling encounter by the aid of a Colt. And when he speaks of a Colt he may be referring to his .45 caliber Automatic Pistol, to the Colt Automatic Machine Rifle, to the Colt Automatic Machine Gun, known as the "Browning," or perhaps to a combination of all three.

In the spring of 1917, the Colt factory was equipping itself with machinery to produce 4125 Vickers Guns, an order for 4000 of which had been placed the previous December by the War Department on recommendation of the Machine Gun Board; sixteen thousand Vickers Guns were to be produced for the Russian Government, and the Colt factory was practically the only one in the United States which at that time was actually producing machine guns in any quantity at all.

The first act of the Ordnance Department, upon the American entry into the war, was to increase greatly the orders for Lewis Machine Guns, and second to make preparation for the enormous manufacture of Browning Machine Guns and Browning Automatic Rifles.

At the request of the Government, the Colt Company made it possible for the Government to secure, by furnishing complete blueprints, the Browning Machine Guns and Browning Automatic Rifles without interference with the existing contracts for the Vickers Guns. This required an enormous expansion of the Colt plant to take care of its growing contracts.

At the factory at Meriden, Conn., they began turning out the Browning Automatic Rifle, or as it is now known the Colt Automatic Machine Rifle, Model 1919. This is a lightweight rifle that can be carried easily by one man and fired from the shoulder or hip.

They also began building the Browning Automatic Machine Gun, or as it is now known, the Colt Automatic Machine Gun, Model 1919. There were over 30,000 of these guns shipped to the American Expeditionary Forces, before the Armistice was signed.

### 50,000 Colt Automatic Rifles

The Colt Automatic Rifle, Model 1919 (of which there were more than 50,000 supplied to the Government), is a lightweight, rapid fire, gas-operated and air-cooled automatic rifle that may be fired from the shoulder or hip one shot at a time, like an ordinary military rifle, or by the quick and simple throw of the small lever, converted instantly into the lightest "machine gun" now manufactured.

When fired from the shoulder or in the prone position, the shooter is enabled to find his target, or object to be hit, through a set of finely graduated sights similar to those on a service rifle.

Repeated tests (and practical experience on the firing line during the Great World War, where this rifle proved its superiority over all other automatic rifles) show the arm capable of a rate of fire approximating 500 shots per minute; 20 shots (the contents of a magazine) can be fired in 2½ seconds, and the empty magazine can be detached and another substituted in a similar period of time by merely pressing a button.

Government Model Caliber .45  
The Type of "Automatic"  
used in the World  
War

### Magazine Holds 20-40 Rounds

Expanding powder gases furnish the energy for the operation of the gun. After the gun is fired and the bullet has passed the gas port in the barrel, the live powder gases expand through the gas port into the gas cylinder and impinge against the head of the piston. This sudden blow forces the piston to the rear, compressing the recoil spring and storing up energy for the return movement. The various lugs and cams actuate the feeding, firing, extracting, and ejection, and also control the operation of the gun. The feeding is accomplished through a magazine holding 20 or 40 rounds in double rows.

It is held between the sides of the receiver, in front of the trigger guard. This magazine is composed of a rectangular tube and a round wire spring wound to fit the tube. Also there is a bottom plate which slides in the bottom and forms the rest for the spring. On top of the spring is a follower which forces the cartridge up against the lips of the magazine tube and holds it in place until stripped out by the lug on the bottom of the bolt. The automatic action of this gun is not disturbed by holding it in any position whatever. The magazine can be inserted while the mechanism of the gun is in either the cocked or forward position.

McNeil & Son are the purchasers of the stock of John Honea of Cushing, Oklahoma.

Every Foot of  
**COLUMBIAN MANILA ROPE**

can now be easily and positively identified on the dealer's floor or in actual use by anyone. This Rope, if a few inches are untwisted, will show imbedded in the heart of a strand a small twisted tape. Pulling this tape out and unwinding it brings to view the colors (red, white and blue) and the signature of the Columbian Rope Company.

Think what this means; you have the tangible evidence in every foot of Columbian Manila Rope that it is made by this Company and, therefore, is guaranteed to be not only pure Manila, but equal and in most cases superior to *ANY* Rope made.

Mr. Dealer, teach your Rope customers to look for the red, white and blue marker; it means repeated orders for you.

## COOK CONCENTRATES ON CLIPS AND CLIPPERS

Specialization has reached a high degree of development in modern manufacture and among the members of the hardware manufacture trade who have worked out successful specialized products is the H. C. Cook Company, at Ansonia, Connecticut.

The names "Ansonia" or "Gem" have come to suggest the patent nail clippers made by this great institution. Of late, another item has been added to the line in the Bull Dog Letter Clip, illustrated

herewith and used by every line and class of business man as the most convenient way to hold letters together before filing.

The H. C. Cook Company originally started to manufacture the Gem Nail Clipper some twenty years ago. A small business developed into a great trade on these clippers. As the Gem Clipper was made out of a high carbon steel, thoroughly hardened, tempered and ground, it was found, before the war, to be a little more expensive than some people required and the Cook Co. gradually developed the Ansonia Clipper for the cheaper class of trade.

The Ansonia Clipper was made from a low carbon steel and not hardened, consequently the expense of manufacturing was somewhat less and the Company formerly were able to sell this clipper on the retail counter at 10 cents. Conditions, however, have changed since the war, and like every other steel article, prices have advanced.

Owing to the rapidly increasing demands for these clippers, the company has just completed a new building, 220x60 feet, of Mill construction, purposely for the manufacture of these clippers. They are being exported to practically every country in the world, and although some of the countries buy sparingly, others buy in large quantities, so that these clippers are known all over the world.

The H. C. Cook Company at its large Ansonia factory also manufactures sub press dies, although they are principally known to the hardware trade for nail clippers and paper clips. The present officers are: Chapel S. Carter, president; Hedley P. Carter, vice president and treasurer; Frank H. Bradbury, secretary.

## RANGE WITH BONDED GUARANTEE

The Malleable Steel Range Manufacturing Company of South Bend, Indiana, is marketing a new modern range with 20 exclusive features and a new 20-year bonded guarantee. This concern had expected to put out its new range about the time we entered the war but postponed it until better manufacturing conditions prevailed. They are now ready for the trade with their New Model South Bend Malleable Range.

The biggest innovation, perhaps, is the offering of this range with a bonded guarantee. We believe this is a new merchandising idea. It had been the intention of guaranteeing the range for 20 years. Realizing, however, that guarantees are getting to be rather common, and too often uncertain, the idea was struck of bonding guarantee for faithful performance. A bond was secured from the Fidelity & Casualty Company of New York, one of the oldest and largest fidelity bonding companies in the world, for the faithful performance of every feature of the strong guarantee.

## WHIP KING MAINTAINS HIS RECORD

During the recent Pacific Coast Automotive Equipment Exposition held in San Francisco, March 30 to April 4, inclusive, Thos. M. Gardiner, "The Whip King," and well known manufacturers' agent of San Francisco and Oakland, California, through his principals, the Boyle Manufacturing Company of Los Angeles, America's premier canteen and automobile accessory manufacturers, carried off honors in their line, and came in for their share of praise for the beautiful display of their products, which was on exhibition in their booth.

In addition, the products of his other principals, the Abegg & Reinhold Company, Inc., of the same city, manufacturers of Varco Superior Socket Wrenches—their most recent invention—carrying all the principles of high grade tools, and which are now being sold by the leading jobbers, was also given the highest award.

Thousands of our readers will recall "The Whip King," of the days when the horse was the principal mode of transportation, and when placing their orders with their jobbers, invariably called for the brands that the peer of all whip salesmen sold to America's foremost jobbers. Orders at the present time may run into thousands of dollars, but are no more welcome than the fifty or one hundred dollar whip orders received from the harness or hardware dealer of the old days. Perhaps this is one of the many reasons that makes our friend the always popular "Knight of the Grip."

## CHICAGO MANAGER FOR RANGE COMPANY

L. Brock, who for the past fourteen years has been connected with Hibbard, Spencer, Bartlett & Company, has severed his connection with that concern and has become branch manager for the American Range & Foundry Company at Chicago. Mr. Brock began in the sales department of Hibbard, Spencer, Bartlett & Company fourteen years ago, working his way up to buyer and manager of the stove and woodenware department of this firm. He will be in charge of a fully equipped sales office at the address mentioned in Chicago.

A married man, age 37, possessing executive ability, a pleasing personality and keen business judgment, with 17 years practical and successful experience as hardware and implement salesman and manager, is desirous of purchasing stock and assuming management or taking an active part in an established business in California. At present located in the San Joaquin Valley. Wish to invest \$4,000.00 to \$5,000.00. Reference required and given. Address Manager, care **HARDWARE WORLD.**

# Plumbing and Heating

## WHICH ONE IS YOU?

Three men, who had to be at the same place at the same time were walking along a road when they came across a fallen tree that blocked their path. It was the road they were obliged to traverse every day. They stopped to consider the best way to get past the tree. They disagreed. One of the men soon had it figured out—he would climb over the branches. He finally reached the other side, but his clothes were torn to shreds and his face and body were scratched and bruised.

The second man decided to walk around the tree. He started, but soon got in mud up to his ankles. He kept floundering about, and lost much valuable time in trying to find a dry path. His clothes were ruined, and he, as well as the first man, was compelled to return home for other clothes.

The third man arrived at a solution in this manner:

“The tree has to be removed, since I have to travel this same road every day, and it might as well be removed right now. But it is too heavy for me to handle. If I climb over its branches, I’ll tear my clothes, and scratch my face and body. If I walk around, I’ll land in a swamp and ruin my clothes. I’ll remove the obstruction now.”

So he went to a house nearby, borrowed an ax, and, after chopping off some of the limbs, he was able to drag the tree out of the road. He reached his destination on time, while his two companions came straggling along some time later.

In business, there are three types of men—one that will attempt to climb over obstructions to reach an objective, one that will flounder around and get lost in trying to avoid obstructions, and the other that removes the obstructions as the quickest and safest way to reach the objective.

Why Smith left home will always remain as much of a mystery as why some merchants expect customers to look them up instead of looking up the customers. Merchandising isn’t a game of hide-and-seek and the sooner found out the better.

Keep yourself mentally, morally and physically clean, if you want to be respected when you get older. What you are at 60 is going to depend on your own efforts. You will not drift into efficiency at three-score.

The frequent shifts made by the younger element in the trade make the satisfied and experienced middle-aged workman look pretty good to the employer, and he does not worry much about a little slowing down, which often necessarily happens with age. He likes the reliability of the older men and he does not shake in his boots every pay-day for fear of a new batch of demands for more pay.

Many a plumber has taken on young men and trained them in the trade, only to have them gobbled up by some competitor who would offer them more money. A few years of that sort of thing led an employer to wonder whether it is profitable to run a plumbing and heating trade kindergarten, whether he mightn’t better resort to the other fellow’s method of over-bidding on employes. It is to be hoped, however, that there will be no general trend in that direction, because there are not enough good employes to go around, and unless every employer does his share of teaching new hands, the result will be exorbitant wages and little good help.

If you can learn at 60, you can be successful at that age. There are mighty few men past 60 who are still willing to be taught about their work, and I don’t know but I should have made that 50 instead of 60. They have their own way of doing things, and if they have no other excuse for it, they are likely to say, “Well, it’s too late to learn it different. You can’t teach an old dog new tricks.”

But you can teach an old dog new tricks if you try hard enough and the real reason why an older man cannot easily be taught new methods is because he will not try to learn them. Too often he thinks he knows it all. As a matter of fact, anything new is worth learning regardless of your age. There are new things coming up in the plumbing and heating trade every day, and it is only the old fogey that will not try to learn them.

**UNIONS** are in use

The Rhode Island Union is made of the best grade malleable iron with a specially constructed bronze seat which makes a tight joint, preventing wasteful, destructive and dangerous leaks.

Approved by the Underwriters' Laboratory and tested in our factory to 300 pounds pressure before being passed as perfect.

The whole story is told in our booklet. Send for it.

**RHODE ISLAND FITTINGS CO., Hillsgrove, Rhode Island**

Group of handsome officials of the Oregon Master Plumbers Association, who will welcome every visitor to the Convention. They are William T. Finnigan, E. G. Ruedy, T. J. Rowe, William Smith and Charles Fullman.

### OREGON MASTER PLUMBERS CONVENTION

As the year rolls around, the good master plumbers of the state of Oregon are looking forward again to their annual convention to be held at Salem during May. It will be the nineteenth annual convention of the Oregon State Association of Master Plumbers, and the date set by Secretary T. J. Rowe and the Executive Committee is May 14 and 15.

Salem was accepted as the convention city after invitations had been received from Mayor O. J. Wilson and the Commercial Club of Salem, as well as from the Salem Association of Master Plumbers. So royally were the delegates and members entertained at Astoria at the convention last year, that a high standard has been set and yet we have it on confidential authority as well as by our own intuition the good hosts at Salem will do themselves proud in entertaining the assembled plumbers.

A special feature of this convention will be the presence of Wm. J. Wooley, Manager of the Trade Extension Bureau of the National Association. It is likely that another representative of the National Association will be present, although more definite announcement was not available when we went to press. During the convention, headquarters will be maintained at the Commercial Club, which has been placed at the disposal of the Association during the convention.

The present officers of the Association are as follows: President, Chas. Fullman, Portland; vice president, W. N. Smith, Astoria; treasurer, Ernest G. Ruedy, Portland; secretary, T. J. Rowe, 111 Grand Avenue, Portland. The following are the delegates at large from the four zones: Zone 1, W. T. Finnigan, Portland; Zone 2, R. F. Zachman, Tillamook; Zone 3, A. L. Fraser, Salem; Zone 4, F. W. Bishop, Baker.

These officials form the Executive Committee of the organization, and the progress, strength and influence of the organization during the past year, as well as during the past nineteen years, has largely been due to the activities of the officers of the Executive Committee.

The "Big Four Quartette," at the last convention. They are R. F. Zackman, James Griggs, Dan C. Rushlight and E. W. Fish.

### WASHINGTON PLUMBERS AT BELLINGHAM

Master Plumbers from all over Washington are planning to shake each other by the hand again and exchange business experiences at the 25th annual convention of the Association of Master Plumbers, which will be held on May 21-22 at Bellingham, Washington.

President P. J. Lavan of Seattle, Treasurer A. M. Goddard of Tacoma and Secretary B. M. Richards of Everett will spare no pains in making this convention the biggest the Washington Association has ever held. Plans are being made along the lines of the motto of the Association, "They builded better than they knew," and it is the prediction of the *HARDWARE WORLD* that this 25th annual convention of the Association will surpass any previous meeting, in benefits to the trade and in profitable satisfaction to those who attend.

### A FEW "I WILL'S" THAT MAKE FOR A FULLER AND BETTER EXISTENCE

"I will talk Health instead of sickness."

"I will talk prosperity instead of failure."

"I will carry Good News instead of bad news."

"I will tell the Cheerful Tale instead of the sad tale."

"I will mention My Blessings instead of my burdens."

"I will speak of the Sunshine of yesterday and tomorrow, instead of the clouds of today."

"I will Encourage instead of criticize."

"I will be a friend to everyone."

The world is moving so rapidly today that one almost has to run as fast as he can to stay where he is. So it's up to all of us to do some tall hustling.

One of the best ways to make customers pleased with your store is to deliver goods to them as soon as promised, or even earlier.

Time used to profit today will accumulate power for you tomorrow.

The man who shakes your hand with such crushing force that you almost cry out in pain, is probably trying to impress you with what a fine, sincere fellow he is. He is quite as much to be feared as the one who lays his hand in yours as though it were a dead fish's tail and waits for you to do the shaking.

The boss has his trials with young men who think they know it all, but if they are ridden hard enough they will generally condescend to learn. But the older man who thinks he knows it all is a problem. Don't allow yourself to get into the pig-headed class when you get old—but why be pig-headed at any age?

Don't get so taken up with the idea that your opinion about your work is so right that you cannot listen patiently to anybody else's ideas, and don't get the idea that just because you say a certain thing is so everyone ought to admit it. Never get past the point where you are willing to take pains to explain how and why you think you are right and don't stick to your way after you have been shown you are wrong.

Every man of 50 who has learned just a little about plumbing and steamfitting every working day since he was 25, should have acquired a fund of knowledge that will insure him a good position as long as he is able to do a day's work. As a matter of fact, any young man who makes it a point to learn something new about the trade every working day from the time he is 20 or so, at 50 will not have to worry about a job. He will have some kind of a position of assured permanence, either as boss or employe. The reason so many young men come to 50 with nothing in view and without even a reputation as good workers is that they have not learned as they went along. They have not profited by their experience.

The middle-aged man is less likely to be all the time looking for a better position, wanting a change every few months. He is better pleased to stay right where he is and work along where he knows just what to expect in the way of wages, treatment, work and living conditions. He knows all about this idea that "farthest fields look greenest." He has inspected them and found that they are no greener because of being farther away and having a greener look. The man of 50 knows just about what he is going to make of his life and he is pretty well contented to go ahead and work it out along that line. At 50 we feel more contented to play it safe and to stick by the sure thing we have.

Every job is interesting if you have an interesting mind at work on it.

## IF YOU WERE A CONSUMER, WOULD YOU BUY GOODS FROM A MAN LIKE YOURSELF?

We cannot be successful in any of these days if we attempt it in a half-hearted way. The battle is too severe. Competition is too strenuous. The consumer or customer reads and is wise. He will discover lack of service, only a half-hearted interest in his welfare, almost immediately. There is no success that is not built upon the red blood, the vital force and the compelling personality of the man behind the counter.

Ask yourself this question: "Do I do my trading with salesmen who treat their customers just like I treat mine?"

A. J. Jones and Herbert Jones have organized the firm of Jones Bros., at Oakdale, California, and will engage in the plumbing business there.

Ed Whitman, for some time a member of Klemmer's plumbing establishment, has become a partner in the firm of Lark & Company, at Willows, California.

The Deer Park Hardware Company at Deer Park, Washington, has developed an excellent business in the manufacture of water measure tanks for use during the irrigation season. The tanks are made of galvanized iron and measure the amount of water allotted to each tract.

The Payne Hardware Company has been organized at San Jose, California, when Chas. A. Payne and James E. Payne purchased the hardware department of the old Mangrum & Otter Company there. A. G. Du Brutz and Chas. L. Snyder have taken over the plumbing and sheet metal department of the former business.

So great has been the growth of the John McFadden Hardware Company at Santa Ana, California, that it becomes necessary to add 1500 feet of floor space for the addition of an adjacent building. The McFadden Company has recently installed an excellently appointed display room for plumbing and heating fixtures. This new department has just been opened.

## G.T.D. GAGE CATALOG No. 43

Gage Catalog No. 43 has been added to the fine library of sales literature already issued by the Greenfield Tap and Die Corporation, Greenfield, Massachusetts. This supplements the small tool catalog, the pipe tool catalog and the machine tool catalog already issued.

To aid their customers in selecting the type of gage and inspection equipment best suited to any particular purpose, the material has been divided into the following general heads:

External diameters, internal diameters, lengths, screws, male threads, tapped holes, female threads, thread limit gages and checks, special thread gages, miscellaneous screw thread and gage inspection equipment, miscellaneous information and tables and indices.

Not only is the catalog instructive in describing the Greenfield Tap and Die Equipment along these lines, but as a source of general information on gages and machine measurements and inspection methods, but it is most valuable to the engineer, the machine shop man and the general manufacturer, who has anything to do with metal workings. The last half of the book is devoted to miscellaneous gage and thread information. Perhaps the best combination of tables and information now available to the trade is found in this catalog. The book is bound in stiff cardboard covers, so that it will stand hard use right at the bench or lathe.

**AUTOMATIC GAS WATER HEATERS**

PITTSBURG WATER HEATER COMPANY - - - PITTSBURGH, PA.

If you lack courtesy when young, you will lack it when old. If you are loose mouthed and profane and given to shady stories when young, you will show those habits at their very worst at 60, and there is nothing that so disgusts people as having to do business with a nasty minded elderly man, whether merchant or lawyer.

Then they do think he is an old fool. Because your work is rough and because you have to associate with many rough men is no reason at all for your not being a gentleman. The days are passed when our idea of a gentleman is a fop in a tall white collar, carrying a cane and a monocle. We have found that a gentleman is a gentleman because of what is inside of his head rather than what is outside in the way of clothing.

There is a big difference between being a good fellow and being just and honest to ourselves and others.

Intemperance in speech is a patron-waster. The patron says, "Too much foam on the pail; not room enough for milk!"

It isn't so much what the public think we are, as what we really prove to be in the minds of those who live with us and work with us day by day.

If the destructive elements now at work in the world and which are trying to find a foothold in our country, could succeed in having their way, the clock of civilization would be set back a thousand years.

If you would succeed in life, determine what you want to do, concentrate on practical ways and means of doing it, and cultivate sufficient far-sighted vision that you will know when and where you should change your original plans. To be inflexible and hide-bound is to retard growth.

### Quality, Efficiency and Durability

No. 66, Pint  
Torch

are the three essential points each mechanic must consider carefully when purchasing tools. Some mechanics overlook these points, yet they try to compete with their more progressive competitors. Experience has taught many that such an undertaking is unsuccessful. You must buy the best to get the best results.

Merely as a suggestion, try the "Always Reliable" when you again need torches, furnaces and braziers. You will then, also, be on our large list of satisfied users.

Your nearest jobber has our goods in stock or will stock them for you.

**OTTO BERNZ CO., Newark, N. J.**

### WHY HE COULDN'T PAY

A western credit man gives the following extracts from a letter of a customer who had been asked to remit: "I have been held up, held down, sandbagged, walked on, sat on, flattened out and squeezed. First by the United States Government for federal war tax, excess profit tax, Liberty Loan Bonds, Thrift Stamps, capital stock tax, merchants license and auto tax, and by every society and organization that the inventive mind of man can invent to extract what I may or may not possess.

"The Government has so governed my business that I don't know who owns it. I am inspected, suspected, examined and re-examined, informed, required and commanded, so I don't know who I am, where I am or why I am. All I know is that I am supposed to be an inexhaustible supply of money for every known need, desire or hope of the human race. Because I will not sell all I have and go out and beg, borrow or steal money to give away, I have been cussed, discussed, boycotted, talked to, talked about, held up, hung up, robbed and nearly ruined, and the only reason I am clinging to life is to see what in hell is coming next. For these and other reasons I am unable to send you the check asked for."

You are never too busy to be appreciative to say, "Thank you!" in your heart as well as with your tongue.

Forge the human nature links that bind patrons and goods together—links of patience, tact and courtesy.

Your job may be a small one, but it is a part of a tremendous organization—see the whole plan and your part will seem greater.

The smallest job  
Much larger grows  
When you see it beyond  
The end of your nose.

Be a human radiator, who can really warm folk! Man alive, folk have refrigerators enough at home—some of 'em married 'em!

Statement of ownership, management, circulation, etc., required by the Act of Congress of August 24, 1912, of Hardware World, published monthly at Portland, Oregon, for April 1, 1920. Before me, a Notary Public, personally appeared T. M. Shearman, who, having been duly sworn according to law, deposes and says that he is the publisher of the Hardware World, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption. Publisher, T. M. Shearman, 383 Taylor Street, Portland, Oregon; editor, business manager and owner, T. M. Shearman. Known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are: None. The two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest, direct or indirect, in the said stock, bonds, or other securities than as so stated by him. T. M. Shearman, Publisher. Sworn to and subscribed before me this 29th day of March, 1920. D. B. Richards, Notary Public.

## YOUNG BUSINESS MEN NEED TO LEARN VALUE OF MONEY

"Many old camels carry the skins of the young ones to market"

Youth is apt to be extremely confident. This is perfectly natural, and if this confidence is rightly guided, it makes for progressiveness. But if it isn't, the situation contains much of menace.

When youth enters the business world—and young blood is always in demand—mistakes are bound to be made, unless the experience of older people is accepted for what it is worth. When younger business people think they know it all and will not heed the principles learned by those who have traveled the same road, then the time is very apt to come when the old camels will actually carry the skins of the young ones to market.

There is no denying the fact at the present time, that as individuals, as communities, and even perhaps as a nation, we are facing something of a crisis. We are a young nation, relatively speaking, and have never gone through just as the experiences which the Great War brought us. Money has been surprisingly plentiful. Our bank deposits have increased. Our wealth has gone ahead by leaps and bounds.

Out of a patriotic sense of thrift and a desire to help the country in her hour of need, large amounts of Liberty Bonds were bought. A great many people who had never had savings bank accounts or bonds of any kind before, found themselves in possession of new holdings, and the sense of great riches overwhelmed them.

When the war was over, there began an orgy of spending such as the country has never witnessed before. Luxurious garments, such as silk shirts and fur coats, jewelry, automobiles and so on, were purchased, either exhausting the savings many times, or devouring the Liberty Bonds in their payment.

Older and wiser heads cautioned conservatism and foretold the readjustments necessary to come back to a peace-time basis, but those who wanted to have their own way went right on having it. Businesses which had gone forward swimmingly during the war, took it for granted that the most advantageous conditions would continue, while those embarrassments having to do with difficulties of getting goods, freight transportation, and all that sort of thing, would speedily be relieved.

Many young businesses did not exercise the caution in the handling of their affairs thought so necessary by the older and more experienced people, and as a result, there will have to be considerable trimming of the business sails on the part of many to weather the gales ahead.

### Value of Planning Ahead

Perhaps more people stumble on this point than any other—they fail to make out an advance budget. Youth is apt to protest that this is too much trouble, and business must be

regulated from day to day. But that is all nonsense, as the old camels, the burden bearers of many years, can tell.

The city or town in which you live has to have a business administration, and that calls for a budget which provides for the paying of necessary expenses, and consequently the tax rate. If it were not for this budget, how would the different departments know how much they could spend—for schools, good roads, the payment of bonded indebtedness, and all that sort of thing?

Any business, large or small, should be organized on a budget plan, and that, too, in advance. This budget should be as carefully worked out as it is possible to make—no guessing, no estimating, no running the risk of robbing Peter to pay Paul. Think of the folly of going into a fiscal year of business with no idea of what the expenses will be, or where the money is coming from! How much greater the satisfaction to budget the business and decide the limits of the expenses, and then to make plans to have the money on hand in advance of the need for it.

In that way, there will be no question as to the ability of the business man to meet his maturing obligations, to take advantage of his discounts, or to provide himself at a fair price, with such stock as he can turn over quickly to good purpose.

If the business man doesn't know how to go about making a budget, whether his concern is of the size of a cross-roads peanut stand, or a big plant with many employees, he will save money to hire a thoroughly efficient expert accountant who understands sound finance. Care should be taken not to get someone who pretends to be an expert accountant, and who is only an expert fakir. A duly certified public accountant may cost more, but they are worth more.

It makes a lot of difference whether the budget is rightly proportioned or lopsided. If you spend too much for advertising or for help, you are not going to have a balanced business. Plan to keep right side up and not to topple over. Take the advice of older and wiser heads. Operate on the budget plan, which makes for mental serenity and business safety, and then there will be far less danger of the old camels carrying the skins of the young ones to market!

The people we envy are not so often those who can do something which we cannot do as better than we can. It is this principle which lies back of the competition plans and "point" those who can do something that we can do races arranged by sales organizations. Rivalry is not jealousy. A bit of envy is all right. It is not that we want the other fellow's record to be less than it is, but we want ours to be more. Turn envy into energy and there will be no sting in it.

### CARRY A KEY CASE

With suits at from \$75 to \$100 a throw, every reasonable care must be exercised to prevent clothing from unnecessary wear. Carrying keys loose or on a key ring in the pocket is an expensive habit. The keys have a tendency to bore from within, as the Bolshevik expresses it.

The accompanying illustration shows how a very practical key cover can be made with a few cents' worth of leather substitute.

### MADE HIM FEVERISH

The story is going the rounds that when in New York recently, Harold Lloyd stepped into one of the New York shops and asked to be shown a certain kind of overcoat.

"How much?" asked the movie man.

"Two hundred and fifty dollars," was the reply.

"Nothing doing! Take it away," said Mr. Lloyd firmly.

"Why, you can afford that," the salesman said, unwilling to lose the sale.

"Sure I can!" replied Mr. Lloyd, "but I'm darned if I'm that cold."

The man who takes risks unnecessarily is bound to come to the time when he will take those risks alone and will receive scant sympathy as his desert.

### "WHAT IS A SALESMAN?"

When the train pulls in and you grab your grip  
And the hackman's there with his frayed out  
whip

And you call on your man and try to be gay  
And all you get is "Nothing today";

Then You're a Peddler,  
By Gad, You're a Peddler.

When you get into town and call on your man,  
"Can't you buy something Bill?" "Why sure  
I can";

You size up his stock—make a rough count,  
And Bill presently says "Send the usual  
amount";

Then You're an Order Taker,  
By Gad, You're an Order Taker.

When you travel along and everything's fine,  
And you don't get up until half past nine;

When you see each concern and talk conditions,  
And write it all home with many additions,

Then You're a Traveling Man,  
By Gad, You're a Traveling Man.

When you call on your trade and they talk  
"Hard Times"

"Lower prices," and also "Decided declines";  
You talk and you smile—make the world look  
bright

And send in your orders every blessed night,

Then You're a Salesman,  
By Gad, You're a Salesman.

### POSITIVE PROOF

Johnny—"These pants that you bought for  
me are too tight."

Mother—"O, no, they aren't."

Johnny—"They are too, mother. They're  
tighter'n my own skin."

Mother—"Now, Johnny, you know that is  
not so."

Johnny—"It is too. I can sit down in my  
skin, but I can't sit down in my pants."

### "FIVE HUNDRED BUSINESS BOOKS"

A publication that should be in the hands of every wide-awake and far-seeing merchant and business man is the catalog of Five Hundred Business Books, recently issued by the American Library Association at Washington, D. C., and edited by Ethel Cleland, librarian of the business branch of the Indianapolis Public Library. The book is after the general plan of the catalog 1000 Technical Books, which was published in June of this year by the association.

A few years ago books on business were scorned by business men, and for good reasons, but such is not the case at the present time. In the volume are classification according to general business, commerce, finance, bookkeeping, accounting, auditing, factory organization and management, office practice, advertising, salesmanship, retail trade and special lines, insurance and, finally, a publisher's directory and general index.

The book will be sent without charge by the American Library Association, War Service, Washington, D. C.

A manager of a plumbing and heating business knows there are certain advantages in hiring older men. He knows they are settled in their ways—in their habits. They are not likely to get mixed up with wine, women and cards or be worth just about half pay Mondays because of the dissipations of Sunday or Saturday night. The fellow who has developed habits along that line has usually paid the penalty of them before he gets past middle age and is not worth hiring at all.

# Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

E

The Hudson Motor Car Co., Detroit, Mich., is using the Black & Decker Electric Valve Grinder in production work and has actually reduced the time previously required to grind the twelve valves in each cylinder block from eleven minutes by hand to three minutes with the Black & Decker Electric Valve Grinder. With this tool one man now grinds in 1440 Hudson Super-Six valves a day.

The Hudson Car has attained an enviable reputation not only by reasons of design but because of the fine machine work which it embodies. The use of Black & Decker Electric Valve Grinders for production work in the Hudson factories and many others is evidence that it does fine work and "stands the gaff."

We also manufacture the well known Black & Decker Portable Electric Drills *"With the Pistol Grip and Trigger Switch."*

#### Proof of Merit—

Over 4,500,000 cans have been sold in less than five years.

## Make your motoring *FREE* from cooling system troubles

FROM the way some car-owners neglect the cooling system you'd think they really welcome trouble—instead of wanting to duck it. For instance, when they are miles from no-where with the radiator leaking badly and the engine heating up rapidly they "curse the luck." But that has never yet helped.

Wouldn't you think they'd get wise to the simplest way of keeping the cooling system practically trouble-proof?

"X" Liquid kept constantly in the water means **no more leaks—no more Rust or Scale**

—proper engine cooling and better engine performance.

The next best thing to keeping "X" always in the water is to keep a can of "X" in the tool kit. Then if a leak develops at any time—anywhere in the cooling system—"X" is simply poured into the water and the repair is made while the car is running.

#### **Eliminates Rust and Scale!**

The man who knows every inch of his car realizes the dangers of a rust-choked, scale-clogged cooling system. That's why he uses "X" in the first place to loosen all Rust and Scale. And he uses "X" constantly to prevent new Rust and Scale from forming.

The verdict of American car-owners is that "X" Liquid improves the cooling system of any water cooled car. It keeps the system LEAKPROOF—RUSTPROOF and SCALEPROOF.

#### **Not a Radiator Cement!**

Don't class "X" Liquid with radiator cements, flax-seed meals, and such "dopes" in powder or semi-liquid form. "X" cannot clog the fine water passages. Be safe. Get the original "X" Liquid. See that the big "X" is on every can.

**LARGE SIZE** \$1.50  
Will do a \$25 repair job!

**FORD SIZE** 75c  
Get "X" at your dealer's

TRADE MARK

**Liquid** makes all water cooling systems  
LEAKPROOF • RUSTPROOF • SCALEPROOF

is used on "WHITLOCK ALL-MANILA" to safeguard your interests—whether dealer or consumer.

When you buy "Pure Manila" Rope specify WHITLOCK ALL-MANILA, and look for the distinctive green tag on every coil.

You will get WHAT YOU HAVE THE RIGHT TO EXPECT—Manila Rope that is thoroughly well made of high grade Manila Hemp exclusively and containing a minimum quantity of good lubricant.

We mean exactly what we say: If you are not entirely pleased with the appearance of Whitlock Rope, or with the service you obtain, let us know or advise your dealer. Remember: "Either you are satisfied or we are not."

# EVERY HOME NEEDS THE SAW MOST CARPENTERS USE

This statement carried by the Saturday Evening Post, Literary Digest, Popular Science Monthly, Scientific American, Popular Mechanics, and 29 leading farm papers regularly to approximately 8,000,000 homes. This message is a new power behind your sale of saws.

The day of the "toy" saw—the cheap "tinny" blade is past. Every man is somewhat of a mechanic. He should have tools. He likes to repair the fence, or build a new coal bin. He will get better results and more sat-

isfaction out of the work if he has good tools to work with.

Carpenters have found by experience that the Disston is the best Saw. That is why most carpenters use Disston Saws. That every home needs this same saw is what Disston advertising is telling the people all over the country every day.

Make this true slogan one of your selling arguments. Talk it today. Keep talking it. And we will put the Saw Most Carpenters Use—the Disston—in Every Home.

GENERAL OFFICES: PHILADELPHIA, PA.

# There Is a Lawson Hinge for Every Building Requirement

**NEW 1800 HINGE**

**No. 1800  
ADJUSTABLE STRIKE**

A pair of the New Lawson standard three-inch spring jamb hinges with adjustable bracket can be used in place of the old style four-inch hinge and blank.

This use gives a wider range of spring action, wears longer and makes a better looking job. Four bolts instead of three hold the door more solidly.

The box flange on this hinge as well as the flange on the strike has an adjustment range from  $1\frac{1}{8}$ " to  $1\frac{1}{2}$ ", covering all standard size partitions.

Lawson Nu Jamb Spring hinges can be applied direct to the jamb of any door without the use of a hanging strip.

This saves at least \$1.50 on each operation. It gives the door far more solid support than if the hanging strip were used.

We also make Lawson surface floor spring hinges and a complete line of lavatory hardware, including bolts, strikes, locks and keepers.

# He Buys a Helper— Not an Ornament

A mechanic realizes to the fullest extent the slightest imperfection in a wrench renders it undesirable for high grade work.

He searches for a wrench of solid, well proportioned material, one with a sure grip and simple assembly.

Whenever such a mechanic discovers a wrench with a "Coes" label, his search ends suddenly, for he knows that he has found a wrench that is perfect in every detail, one with which he cannot go wrong.

That is just why you cannot go wrong in keeping a good stock of Coes Wrenches.

The Coes "Knife-Handle" Wrench with its simple construction and sturdy workmanship is the best selling wrench made for all general use. It never disappoints.

## SILVER STEEL SAWS

### VIRGIN ORE

When Elias C Atkins began making saws way back in 1857 he realized that no steel manufacturer had at that time the correct formula for making as high a grade of steel as he determined to use in his saws.

Being an expert metallurgist he prepared his formula, which was based on Virgin Ore. This formula contained many important elements that stamped it as the best that had ever been used. Experiments were carried on day by day and month after month, and after a long interval success was achieved—thus "Silver Steel" Saws were born.

This steel—Atkins exclusive formula—has the quality of receiving a hard, tough temper, stiff and firm, a quality that takes a keen, sharp cutting edge—a quality as fine as the material in high grade razors—that's "Silver Steel" and it's not too good for Atkins Saws.

"Silver Steel" Saws—made from Virgin Ore—are known the world over, and the constantly growing demand demonstrates their quality.

*Have you Atkins Saws?

## *The Importance of HINGES in a COMMUNITY*

**S**TREET after street, Churches, Schools, Public Buildings, and Homes; thousands of persons living within a few square miles. Yet each one lives his life apart—has his own ideals, ambitions and work.

Of all our modern improvements and appliances to make city life more pleasant, none is quite so important as the hinge. Hinges make Doors possible! And doors provide protection, convenience and quiet—permit the family, the unit of civilization, to live alone.

McKinney Hinges and Butts have served a nation for fifty years. Unassisted, unnoticed, without sagging or even a squeak, they have quietly established a reputation—a standard by which all other hinges may be fairly judged.

McKinney Hinges and Butts are made to artistically match any architectural design. From massive door to small box lid they serve their purpose well. They fill every hinge need perfectly!

When you consider building or repairs, remember the importance of hinges. A careful and correct selection will be rewarded by years of noiseless, uninterrupted service.

And when you go to buy, don't just ask for hinges. Get the best by remembering the name McKinney.

The name *is* important.

McKINNEY MANUFACTURING COMPANY, Pittsburgh  
Western office, Salt-Lake Bldg., Chicago Export Representation

# McKINNEY

## Hinges and Butts

Also manufacturers of garage and farm building door hardware, furniture hardware and McKinney One-Man Trucks.  
These McKinney One-Man Trucks eliminate the need of extra helpers and cut trucking costs in half.

*This is the fifth advertisement in the big national campaign to make everyone consider the importance of hinges and to buy the best. This advertisement appears in the Saturday Evening Post, May 1st. Other advertisements, appearing in Architects' and Builders' Magazines, are swinging this class of buyers to a full realization of the McKinney standard.*

## *Hardware Dealers*

McKinney advertising is doing wonders for McKinney Hinge and Butt sales. Millions who before gave little thought to the importance of hinges, now know the worth of the name "McKinney" on the hinges or butts they buy.

Hundreds of Hardware Dealers have identified their stores with this big advertising campaign. The results have been beneficial both in sales and prestige gained.

Give your store the added impetus made possible by national advertising. Establish it as Headquarters for McKinney Products in your locality.

Proper display material—the connecting link between your store and the national advertising—will be forwarded upon request.

**KEEN KUTTER**

## In Every Village, Town and City

Time after time, right into the homes of your trade, go such double-page advertisements in The Saturday Evening Post as the one shown above.

Their ever-convincing messages of Keen Kutter quality and guaranteed satisfaction reach practically every class of your tool and cutlery trade—the skilled mechanic—the occasional user of tools—the women of the homes.

To keep Keen Kutter more insistently before the eyes of the skilled workman, page after page of Keen Kutter messages are appearing regularly in The Carpenter—the union paper with 350,000 skilled mechanic readers.

Entering more than a million and a half farm homes, dominant display in many farm papers is used. Direct, intensely interesting appeals keep Keen Kutter uppermost in the minds of users of tools and cutlery of every kind on the farm.

Seize the opportunity—cash in on Keen Kutter advertising—get greater profits from your sales efforts.

Make the tremendous Keen Kutter campaign work for you—show The Saturday Evening Post spreads in your windows—use the special Keen Kutter displays—it means livelier turnover and satisfied customers.

**SIMMONS HARDWARE COMPANY**

# Announcement!

There are no two ways about it—Demand must be Satisfied by Increased production.

When a manufacturer sees that the market is “wide open” to him, pointing to heavier purchases and a more extended use of his Product, he must anticipate the consequent increase by taking steps to satisfy it. That is Foresight. It is also sound Business Judgment.

For the past few years “Quality” and “Expert” have been **the** Big Sellers in the Hack Saw field. A superior product—made by a well-known manufacturer—and earnestly pushed by his Jobbers and their Dealers could not help be otherwise.

We have been meeting this increasing demand from time to time as occasion called for larger production by every ordinary means known—improved machinery, increased factory efficiency, etc. But it has long been evident that good as this is, it is not good enough—that we must adopt more positive means of increasing production.

That is what decided us on a very definite and important step—the complete and absolute separation of our Band Machine and Band Saw business from that of the manufacture of Hack Saw Blades.

Accordingly, in the future the Napier Saw Works, Inc., will continue the manufacture of the well known “Quality” (tungsten steel) and “Expert” (crucible carbon steel) Hack Saws—but to the exclusion of all other products.

This we feel will give us that freedom and opportunity for development, not merely to increase enormously our production of Hack Saw Blades, but also to concentrate all our efforts thereon, to make “Good Hack Saws Better.”

Write for Napier Jobber Proposition.

# Get a Grip on Wrench Sales

Sell a good wrench—or better not make the sale. Good wrenches like Pexto, out-grip, out-last and in the end out-sell cheap ones. Stores with a real grip on wrench sales are found to recommend only the best.

Pexto Wrenches are good wrenches with a hundred years' experience built into them. They have the metal, the temper, the design and features to maintain their leadership for another century.

And Pexto Wrenches are known to the general public. National advertising in the Saturday Evening Post has planted the name Pexto indelibly in the minds of hundreds of thousands of people. They can be sold *more* than wrenches—they are ready for the complete line of Pexto Tools—and you can sell them.

**BARCALO MANUFACTURING COMPANY**  
BUFFALO, N.Y., U.S.A.

The advertisement features a large, detailed illustration of a Barcalo Model N adjustable wrench. The wrench is positioned diagonally across the frame. The head of the wrench is at the top left, and the handle extends towards the bottom right. The handle has two dark, oval-shaped labels: one near the head that says "DROP FORGED" and another further down that says "BARCALO". The wrench is set against a dark, textured background. The entire advertisement is enclosed in a rectangular border with decorative hexagonal corner pieces. The text is arranged around the wrench, with the brand name "BARCALO" at the top and bottom, and the model name "MODEL N" to the right of the head. The phrase "DROP FORGED" appears twice, and the list of sizes is at the bottom left. The angle "22½° ANGLE" is noted to the right of the handle.

# ALLITH-PROUTY

Garage door hangers are exactly what your customers want. There is a style for every plan. They sell readily because of their pleasing design and finish. They make more sales because they do their work to the customer's complete satisfaction.

The style of garage door illustrated is very popular with the majority of garage owners. Many are refitting old garages with this style 79 hanger and sliding door. Practically every one building a garage this year will equip it with doors of this type. Get this business for yourself, and have satisfied customers send others to you. A stock of **Allith-Prouty** sliding door hardware will do it. **Write for Catalog 90.**

Ball-bearing swivels and roller-bearing axles make type 74 hanger easiest running. Malleable iron frames for toughness, and steel where the wear comes make type 74 hangers give excellent service after years of wear and abuse. Easily adjusted to weather or settling of building. Saves space, is adapted to any corner door, never jams or binds.

## RAZORS

### Two Genco Favorites

#### GOLD SEAL

Ground full concave, blade finely polished, back and tang heavily GOLD PLATED. Transparent amber handle.

The beautiful combination of blade with gold plated back and tang and transparent amber handle, produces a handsome razor in the Gold Seal.

#### FLUID STEEL

Ground full concave, blade finely polished, back and tang finished dark GUN METAL by our anti-rust process. Handle imitation ivory. Contrast between an ivory white handle and dark gun metal back and tang, makes the Fluid Steel unusually attractive.

When your customer buys a razor that shaves him smoothly and comfortably again and again—one with an edge that can be tuned up for each shave by a few strokes on a good strop—he is thoroughly pleased with his purchase.

Genco Razors are guaranteed to please men in just that way. Your men customers are familiar with the guarantee:

**“GENCO RAZORS MUST MAKE GOOD OR WE WILL”**

They see it continually in Genco advertising appearing in the Saturday Evening Post and a list of other National Publications.

Add to this guarantee of quality the splendid appearance of the Genco Gold Seal and Genco Fluid Steel styles, and you will know just why so many of these two popular Genco Razors are being sold.

Most Jobbers Carry Genco Razors in stock. If yours do not, write us.

Build for Bigger  
Better Business with

Lasting Economical  
Satisfactory-**USERS KNOW**

## Why not use *salesmen* as "specialists"

**W**OULD it be considered a "stretch of imagination" if one were to picture a troubled superintendent or works manager telephoning a local jobber to "send up Stimson your salesman, as we're up against it on our threading job"?

Such a thing is quite possible.

Threading problems are increasing on account of the larger production and closer accuracy demanded in the screw-cutting industry.

Supply Houses who are "looking ahead" can see the benefit to be derived by having their salesmen educated as "specialists" in screw-cutting problems and are using **GTD** Threading Specialists as instructors.

Why?

Because **GTD** specialties such as the "*Gam*" Tap with its shearing-cut and the "*Aarn*" Die with its precision adjustment and increased production capacity are overcoming threading troubles wherever they are introduced, and are raising the prestige of the jobbing houses connected with "**GTD**" Tools, which means, of course—"more business."

Dealers carrying the **GTD** line of screw-cutting tools and specialties are entitled to the advice and instruction of **GTD** Threading Specialists for their sales staff, which enables them to "advise" on threading matters, command the respect and attention of their customers, and incidentally promote further trade.

# The Greatest Galvanizing Discovery of the Age

Exclusively Developed by the  
**American Steel & Wire Company**

A new and decided advance in the art of galvanizing wire, resulting in a heavier coat of more lasting zinc that stays on. Either Bessemer or open Hearth Steel. Big wires—more steel per rod—mean longer life and greater strength. Elastic hinged joints—mechanically joined, the only true and enduring way to unite a fabric without injuring the metal. We also put this wire into

Banner Poultry Fence brings big and quick profits to dealers, and great satisfaction to customers.

Banner Poultry Fence is a true woven wire fence and not a netting. Larger wires without increased cost. It is made of 15 and 17 gage wires, instead of 19 or 20 gage wires, as used in old-style fabrics, and has 22 wires in 4-foot height, 16 wires in 2-foot height, making a poultry fence of minimum close space and immense strength.

Banner Poultry Fence Wire is hard, stiff and springy. It carries a coat of zinc put on by the latest method—a discovery, a real improvement in galvanizing—a zinc covering more lasting; it stays on.

Banner Poultry Fence costs about the same as poultry netting in the principal selling sizes, despite the use of heavier wires. The close spaced wires are at the bottom where needed, with gradually increased space at the top, where close spacing is not necessary. Graduated spacing means a

saving which is put into larger wires without increased cost to dealer or consumer.

Banner Poultry Fence saves in cost of erection, because it requires fewer posts, while top and bottom rails are not needed to keep the fence in shape.

Banner Fence makes a neat construction, and forever does away with the ragged, saggy appearance of old-style fabrics.

## *The toolmaker says:*

"Yes, I've got quite a number. No more, probably, than most toolmakers, but quite a number just the same. But then, I ought to have a lot of 'em. I've been buying Starrett Tools ever since I was an apprentice.

"You know my work calls for pretty close limits, and some way or other I've got a feeling of confidence in Starrett Tools that makes it easier for me to do good work.

"When did I get my first Starrett Tool? Oh, somewhere back in the 80's. In fact, it must have been pretty soon after the Starrett factory started. There's one thing that always impressed me. Right from the start, Starrett Tools have been designed and made by men who knew machine shop practice. You know, practical men. And somehow it shows in the quality of the tools."

# A Strong Wire Staple -- and a Felt Washer

**--Little Things, Yet As Here  
Applied They Lengthen Life  
And Increase Usefulness  
Of Collar Pads**

Pat. in U.S. Dec. 1, 1914  
Pat. in Canada Apr. 6, 1915

## New Patented Hook Attachment

A strong wire staple reinforced by felt washer firmly grips hook to body of pad even though cover has been weakened by sweat and long usage. This lengthens life of pad. It is the greatest improvement since we invented the hook. *Used on all our Hook Pads and only on pads made by us.*

## Stuffed Collar Pads

are the best safeguard against shoulders of horse being chafed, galled and bruised by collar. They excel the unstuffed kinds which lack the soft, pliable, cushion-like and absorbent features possessed by pads containing our specially prepared composite stuffing.

## Low in Price---Long Lasting---Well Advertised

Our sixth campaign of advertising direct to users, through the medium of leading agricultural publications, is on a more extensive scale this year than any previous one. This serves to further the interest of dealers and jobbers.

Dealers are requested to write us for a supply of new books concerning care of horses and containing many valuable emergency horse remedies. Every horse owner will want a copy. Sent Free upon request.

*For Sale By Jobbers*

# THE BIG SUCCESS

## MUELLER

### The "Big 3"

## PIPELESS FURNACE

**T**HE all round construction superiority of the Mueller, backed by trade-creating advertising and powerful selling co-operation, gives every Mueller merchant a tremendous advantage.

When you talk Mueller construction features—The "Big 3"—you have selling arguments which never fail to convince. You can safely recommend the Mueller—put your reputation behind it—because it will hold and build trade for you.

### The "Big 3"

The exclusive construction features that have established Mueller superiority:

1. Large and Properly Proportioned Register Face.
2. Spacious, Unobstructed Air Passages.
3. Vast and Scientifically Designed Heating Surface.

Write for the Mueller Book and get full details of the "Big 3" features and other superior points of Mueller construction. Learn also about the Mueller sales plan that helps you get the cream of the business.

The Mueller has stood the test of real service and its record is overwhelming evidence of its heating efficiency and fuel economy. That is why every merchant who handles it is profiting by the big and constantly increasing demand for the right kind of a pipeless furnace. The Mueller squarely meets every requirement of pipeless heating.

Don't ignore the opportunity for Mueller sales in your community. Get in touch with us at once and learn full details of our liberal and attractive agency proposition.

D.; Wenatchee, Spokane, Seattle, Wash.

## A Few Baldwin Features

**Provision Shelves.**—All Baldwin Refrigerators are fitted with heavy tinned woven wire shelves. These are the best shelves made, permitting of free circulation of air and being strong and easily cleaned. They are double or retinned after making and do not rust.

**Elastic Packing Around Edges of Doors and Lids.**—In addition to the usual laps on doors the latter are provided with elastic packing around the edges, this in combination with our lever lock making them doubly air tight. The lids of our upright styles are also fitted with this exclusive ice saving feature not found in other makes.

**Casters.** — We use a first-class caster, with maple or lignum vitae wheels, varying in size according to weight of refrigerator. Its chief merit lies in the fact that it can be inserted and withdrawn from the socket, but will not drop out, the shaft being gripped at top by the steel socket.

**Air Tight Waste Trap.**—Our new inside trap is of brass, nickel-plated, and comes apart for cleaning. Being in the bottom of storage compartment, it is more easily reached than when underneath the refrigerator. Waste pipes are also removable for cleaning.

**The Baldwin Refrigerator Company, Burlington, Vt.**

## *Viko, a Saleable Line*

Aluminum cooking utensils have long since passed out of the realm of "new fangled things" and have become a staple, standard product which every merchant who deals in household goods carries as a matter of course.

But just as there are degrees of saleability in other standard products, so are there degrees of saleability in aluminum ware.

VIKO, The Popular Aluminum, is an uncommonly fast seller: first, because it is attractive, durable, and improved in design; second, because it is popular in price.

And the line is extensive. Everything you need for completeness of stock, can be found in Viko. For full information about Viko—

## The Popular Aluminum

# Remington UMC

**I**T is the Tritch policy to offer to the trade those brands of products which have behind them the reputation of a successful merchandising history.

Remington firearms and ammunition hold an important position in the minds of critical sportsmen everywhere—an asset which progressive retail dealers will recognize.

Rather than merely filling the demand for products, Remington has anticipated the needs of the sportsman by developing new ideas and processes. The new Remington .380 Automatic Pistol (Model 51) and the exclusive WETPROOF process applied to all Remington UMC Shotgun Shells, are two evidences of Remington leadership in this field.

Remington shotguns and shells, high power and .22 caliber rifles and metallic cartridges, are regarded as standard at home and abroad. The first Remington was made in 1816.

We will be pleased to have you write us about Remington products and to furnish you with window and store display material upon request.

# American Folding Kampkook Stove

**Now is the Time to Prepare for the Camping Season**

The KAMPKOOK has been designed to provide for campers, automobile tourists, sportsmen and all who enjoy outdoor life, an efficient and serviceable camp stove, and it has all the requirements which go to make up a perfect stove for all camp cooking.

The KAMPKOOK is convenient and easy to operate, ready for business in a jiffy. Simply remove the cover, place tank in position and stove is ready to light. There are no loose parts to become lost, nothing to screw together or assemble and no alcohol torch is required to light it.

The cover serves as a stand or base upon which to set the stove, so that it stands level and firmly, right on the ground or wherever it is placed.

## Burns Gasoline

The American Folding KAMPKOOK stove burns common gasoline, the fuel which may be secured anywhere. The tank holds a sufficient quantity of gasoline to run both burners for two and one-half hours when burning at full capacity. A handy durable pump is furnished with each stove. By means of a few strokes from this pump, air pressure is supplied in the tank, which forces the gasoline into the generator tube, where it is converted into gas and fed to the burners. As the stove is operated under air pressure, it produces an intense heat, although the flame may be regulated to a low, simmering fire if desired. It burns with a clear blue flame, there is no soot or smoke.

Only the first burner must be generated; this produces gas for the second burner, which may be turned on or off at will.

The KAMPKOOK puts into camp and outdoor life a comfort and convenience which has heretofore been lacking. It eliminates all fuel worries. With the KAMPKOOK your meal is ready in less time than it ordinarily takes to gather firewood and start a fire. There are no flying sparks, no danger of fire, no smoke, no delays.

**No equipment complete without the American Kampkook. It is an absolute necessity to the comfort and enjoyment of an outing.**

Showing the Kampkook set up and ready for use

Kampkook folded when not in use  
Size  $14\frac{1}{2} \times 8 \times 3\frac{1}{2}$  inches. Weight 8 lbs.

## Compact, Handy Substantial

The American Folding KAMPKOOK stove is the handiest and most compact camp stove made. There are no projecting parts to get broken, no loose or separate pieces to get lost; every part is contained in the case and the cover securely closed so it cannot accidentally open.

Even the cut-off valve for turning on or off the second burner has a telescoping valve stem which does not project through the case when stove is not in use.

The KAMPKOOK is just the stove for "roughing it." It is built substantially to stand the hard knocks. The steel case affords ample protection for the enclosed parts. The burners are cast iron and the grate is mild steel, hence it cannot crack or break. The generator tube is seamless brass and so constructed that, should it become necessary after long use, it can be quickly and easily removed and cleaned by anyone.

Case is fitted with handle, making it handy to carry. The finish is black enamel. Stove folded is  $14\frac{1}{2}$  inches long, 8 inches wide,  $3\frac{1}{2}$  inches high, and weighs only 8 pounds. It requires but little room, is light enough to carry on a motorcycle. It is the ideal stove for picnic parties.

## WATER PRESSURE SYSTEMS

---

### *For Town or Country Homes*

**You** have water under pressure

**When and Where** you want it by

simply turning a faucet. Having a supply of running water at instant command means more than the comfort it brings and the time and money it saves.

It spells protection against fire and an added value to your property.

Illustration shows our Perfection Hydro-Pneumatic Water Supply System No. 600, electric motor driven; starting and stopping automatically controlled. Designed for operation on any electric current. Double Acting Pump for shallow wells, cisterns, springs or lakes. Pump gears run in an enclosed bath of oil—this same principle is used on our large heavy duty pumps. Brass lined cylinder; Valves readily accessible. Furnished with automatic tank pressure controller and relief valve; galvanized water tank; pressure gauge and necessary fittings.

Capacity of Pump 180 gallons per hour. \_\_\_\_\_

We furnish **Pressure Systems** of larger capacity, driven by electric motors or gasoline and kerosene engines.

We have **EVERYTHING** in the pump line—from small spray and hand pitcher pumps to deep well and power pumps.

Send for special pump catalogs. Advice cheerfully given on your pumping problems.

# Stanley Tools

## Stanley "Pistol Grip" Adjustable Saw Set No. 42

This Saw Set embodies several unique and important features not heretofore seen in tools of this description.

The shape of the body and handle enables the user to operate the tool with great ease and with the least possible exertion, and the saw is held firmly against the gauge while the tooth is being set.

It can be readily adjusted by means of the knurled thumb screw to give a greater or less set to the teeth of the saw, according as the saw is to be used for coarse or fine work. As the anvil or part against which the plunger works is graduated, the same adjustment can be easily obtained for duplicate work.

The tool is so designed that the saw teeth are in plain view, which enables the user to quickly adjust the tool to the tooth to be set.

The plunger and anvil are made of tool steel—hardened and tempered. All parts are carefully machined and are interchangeable.

The tool is given a fine black finish.

Packed one in a box.

Send for special circulars.

## A More Comprehensive Savage Service

You have known Savage as makers of a famous line of Sporting Rifles and Automatic Pistols.

Know Savage now as makers of a complete line of small arms.

By the purchase of the J. Stevens Arms Company, Savage acquires the privilege of making the tried and time - proved Stevens Shot Guns, Small Bore Rifles and Target Pistols.

So another milestone is set in our progress, and it is again demonstrated that an ideal of service transcends in value all other assets.

Savage has always built its every arm as if it were for the personal use of the builder. It is now glad to be able to extend this principle of service to cover the entire small arms field.

## ANY OLD THING USED TO DO

Once upon a time the barn door was a hole in the side of the building with a door that worked nicely, perhaps, **when the barn was new.**

You can no doubt remember how it worked a little later, after the weather, the birds, the force of gravity and the deteriorating effect of time had borne upon it the wear and tear of every day use—you can visualize that farmer's violent effort to open or close the door.

Picture the same farmer after his barn doors have been hung on R-W Door Hangers.

**Now**, when we leaves his stock for the night, he rolls his door shut with one hand—yes, with one hand, because his doors roll on smooth-running, trouble-proof, weather-protected door hangers—while with the other hand he switches off the electric light that illuminates his barn, and makes for his easy chair and the metropolitan daily.

**And the next time he builds a barn doorway** he is going to buy his door hardware from the hardware merchant who sold him

Wide bearing of the wheel distributes weight and makes it the Easiest Running Hanger on the market.

Packed one pair in box complete with bolts; one-half dozen pairs in a case.

Track has Slidable Bracket, which has made the World's Best Hangers so popular with the building trade.

If your jobber can't supply you we will.

**THE TOPPING MFG. CO.**

For 18 Years Safety Door Hanger Co.  
ASHLAND, OHIO, U. S. A.

The dependability of Myers Hay Unloading Tools is so well known in all hay making circles that Myers Unloading Service has become the standard of comparison for all others.

This in itself is the best recommendation we can mention, and should lead dealers, carpenters and builders to investigate the Myers Line of Unloaders, Forks, Slings, Tracks, Pulleys and Fixtures before stocking for their 1920 trade.

Take advantage of Myers Ease of Operation, Large Capacity, Speed and uniform service, and let them produce business for you. Ask your Jobber or write us. Catalog and prices on request.

## **Will's Scientific Sprinkler FOR LAWNS AND GARDENS**

**"There's a Reason Why This Business  
Increased 100 Per Cent in 1919."**

**Three Superior Qualities  
Durability—Efficiency—Cheapness**

Made of steel galvanized pipe. Saves 25% on Water Bills. Covers 25% more surface with same water. No Rust—No Leaks—Solid Standards—securely attached. No bending or breaking. Hose connection BEST made. The Spray is distributed equally, covering every space and corner.

Made in all Lengths, and to suit any pressure. Guaranteed for 10 years' service if properly cared for. Ask your Jobber or send direct to the Factory for our descriptive folder.

**WILLS SPRINKLER CO.**

607 CROCKER ST. LOS ANGELES, CAL.

Goods Made by  are Made to Please

## Kees Metal Corners

are made to fit and protect all types of siding. They save hours of expensive labor and produce a better job. Heavy gauge galvanized iron assures durability. Chemically treated surface holds paint or stain as readily as wood. Pierced to take nails. Are practically invisible if painted with building—add class if painted as trim. No ornaments to catch dust or moisture. Accurately shaped to fit the siding and make a neat and absolutely water-proof job. Can't possibly spread or open. They please the builder and the owner.

Applied on  
Drop Siding

### For Drop and Lap Siding

You can sell these satisfying specialties to every builder and home owner no matter what type of siding they use.

Used on  
Lap Siding

## Build Goodwill Custom For Your Store

Wherever you sell a Sturges Steel Churn you have commenced to make a lifetime customer, and pleased customers are your best advertisements. And Sturges Steel Churns deliver a satisfactory service of efficiency and economy.

**Sturges & Burn Mfg. Co.**      **Waynesville, Ohio**  
I have used one of your steel churns nearly two years and think there is none better. It is easy to operate, easy to keep clean and a time saver. I positively could not do without it on the farm. **MRS. M. ROGERS.**

This testimonial brings out the points

in Sturges Steel Churns which make them easy to sell. Place one on display and you will attract the churn buyers of your neighborhood. All drawn steel barrel, heavily tinned. No corners to retain dirt. Cannot soak up moisture. Easily cleaned and kept pure and sweet. Attractively finished in red and blue enamel. A lifetime of service assured by its all-steel construction. Made in four sizes. Sturges Steel Churns mean more and easier sales and increased profits. Write for circular No. 35X.

**"Forstner" Brace and Machine Bits**

For Fine Carpenter, Cabinet and Pattern Work

SPECIALLY ADAPTED FOR HARDWOOD WORKING

The Foster Labor Saving Auger Bit, unlike other bits, is guided by its Circular Rim instead of its center; consequently it will bore any arc of a circle and can be guided in any direction regardless of grain or knots, leaving a true polished surface. It is preferable and more expeditious than chisel, gouge, scroll-saw, or lathe tool combined, for core-boxes, fine and delicate patterns, veneers, screen work, scalloping, fancy scroll twist columns, newels, ribbon moulding and mortising, etc.

Manufactured by **THE PROGRESSIVE MFG. CO., Dept. "A," Torrington, Conn.**

Enquire of Your Hardware Jobbers, or Write Us Direct.

Supplied in Sets

Write for Catalogue

**Superior Casement Adjuster**For windows that open out  
Operates without disturbing the screen

Superior Casement Adjuster is the most convenient to operate because all that is required to unlock and move the window is to simply move the handle; when you let go the handle the window is locked automatically.

Superior Casement Adjuster is the strongest because it locks on the rod fastened to the window and thus combines the strength of the two rods.

Superior Casement Adjuster holds the window firmly at any angle and does not allow the window to rattle.

## ONLY BOMMER DOUBLE ACTING SPRING BUTT HINGES

have the weight supporting bearings correctly located to liberate the action of the springs, reducing breakage and increasing spring power, preventing unequal wear of the barrels, and giving practically unlimited durability.

### Bommer Floor Surface Spring Hinge Has Release and Holdback Features, Ball Bearing and Alignment Device

The most durable hinge of its type; holds the door open when swung to 90 degrees. The spring-action can be entirely released so door will swing free, without spring-action, by inserting a wire nail (when the door is open) into a hole provided in the side plates. The spring-action can be restored by withdrawing the nail.

# A Good Rope— Seaport Manila

**M**OST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

SEAPORT MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

### Dual Protectors of the American Home!

**W**HAT home would be without the beneficent insurance policy which restores and repairs after loss and damage.

Without insurance those catastrophes, beyond the power of individuals to prevent, would be complete. And householders are being told to companion this insurance with the protection of a COLT to thwart harmful and evil influences which, unless prevented, lead to catastrophe.

These evil influences take various forms. The auto thief can be put to flight if interrupted by a COLT as he attempts to run a car out of the garage at night. The fire bug does not make a ruin of the home or factory against the argument of a COLT. The night prowler caught upon the veranda has no other thought but flight when brought face to face with a COLT.

Your sale of fire arms can very easily be doubled if you use these arguments to householders who wish the fullest protection for their homes and property.

## FIRELESS STOVE

### A Bigger Summer Business

Summer usually brings a sense of drudgery to the housewife. She thinks of spending hours over a hot stove in an over-heated kitchen.

But not so with the woman who own a Duplex Fireless Stove. She knows that she will be "kitchen free" this summer.

Millions of women from coast to coast are reading the advertising of Duplex Fireless Stoves in the leading women's publications and many are seeking the Duplex dealer's store. Some of them are in your district.

Duplex dealers are given every selling aid—live store displays, moving picture slides, posters, booklets and electros for their newspaper advertising. The Dealers' Help Department of the world's largest manufacturers of Fireless Stoves backs up Duplex dealers in solving every sales and advertising problem.

If you are not a Duplex dealer now—write today for our dealer's proposition. Let us show you how we can help you build a bigger and better business.

## A Sure Winner

You are taking NO CHANCES when you stock

## Ironton Bunsen Burner Heaters

A few of the special features in Ironton Heaters: The Bunsen Burner—the air mixer—the circulation of cold air from the floor—the admixture and secondary combustion. These and many other distinctive features constitute the superiority of the Ironton, and will bring many new customers to your store.

Irontons produce more heat per foot of gas consumed than any other heater in the market. They burn the gas clean, odorless and free from soot and poisonous gases. No blackened walls or ceilings. A trial always convinces the customer of the superiority of Ironton Heaters, and helps you to sell others.

Ironton Heaters are made in 68 different styles and sizes—a size and style suited to every requirement, and to every pocket-book.

## The Most Beautiful Fireplace

*Is incomplete without a*

### PEERLESS DOME DAMPER

You can sell a Peerless Dome Damper for every Fireplace now under construction in your city by explaining its advantages to the owner or contractor.

It saves fuel. Regulates draft. Increases heating capacity. Keeps temperature uniform. Prevents back drafts and dirt from blowing into the room. Reflects the warmth and glow from an open fire into the room instead of sucking it up the chimney.

Start today—tell your contractor friends and prospective home builders about Peerless Dome Dampers, Ash Traps, Ash Doors and Peerless Fireplace Furniture. The profits from Peerless sales pay you well. Write today for Catalog "F."

**PEERLESS MANUFACTURING CO.**  
INCORPORATED  
 Makers of Fireplace Furniture  
 LOUISVILLE, KY

There is a Peerless Dome Damper for every fireplace. Unique features of operation. Cannot get out of order. Blueprints furnished.

## Assured Profits by Selling the SIMPLEX IRONER

*"THE BEST IRONER"*

Comfort and ease at what is otherwise very tiring work is a unique feature enjoyed by women who use the Simplex Ironer. This is possible because of the extreme simplicity of the Simplex, with its wonderful automatic feed control.

Women to whom you sell a Simplex can sit down and iron. That is a big selling point which is attracting many profitable sales to Simplex dealers everywhere.

The household appliance department selling the Simplex can do so with the satisfaction of offering customers the leader in the field.

We co-operate in training your sales force in specialty selling. The SIMPLEX Sales Plan for dealers is far-reaching. It provides new practical suggestions for the building up of your entire Household Labor-Saving Appliance Department.

# ALUMINUM "Real Solid"

## ANNOUNCEMENT

The "REAL SOLID" LINE has been for 30 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

## A New Line of "REAL SOLID WARE"

This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidity and Durability.

We have eliminated unnecessary expense of CAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

**TRIMMINGS**—Tinned Iron, using Double Coated Tinned Iron—The best on the market.

**PROTECTED HANDLES**—All Coffee and Tea Pots with handles, both curved and straight—bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

**OUTSIDE FINISH**—The Same HIGH CLASS polish as heretofore.

**INSIDE FINISH**—Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.

We have added 25 New Items, all practical. This makes the "REAL SOLID" Line the most complete on the market

Write Today and get our New Catalog just off the Press.

**RUTEMBER ELECTRIC CO.**  
Marion, Ind., U. S. A.

## Hidden Hardware Won't Sell Itself

Don't keep your hardware out of sight, in odd shapes and sizes of boxes. Get it out where people can see it. If you do this you will sell more, because your customers will then be reminded of their needs.

Put "Duluth" Hardware fixtures to work for you, and they will pay for themselves in extra sales made.

**DULUTH SHOW CASE CO.**  
DULUTH, MINNESOTA

# CHATILLON SCALES

CHATILLON

## Preserving Scales

For the Housewife Who Does Not Believe in Haphazard Preserving

There is scarcely a household in your immediate vicinity in which at this time of the year the housewife is not interested in the question of fruit and vegetable preserving.

Preserving by weight is the only sure way of getting the desired results. CHATILLON PRESERVING SCALES insure preserving results. They are accurate and dependable.

Stock them. You will not only profit from their sale, but the housewife, who will want paring knives, mason jars, and all the other preserving accessories the hardware dealer carries, knowing the reliability of Chatillon Scales, will depend upon you for these other articles, too.

Displaying and pushing household scales offers the hardware dealer an excellent opportunity of increasing his sales in all these lines, with the consequent increase in profits and prestige as a quality dealer.

Your Jobber Will Gladly Furnish  
Complete Information 

**JOHN CHATILLON & SONS**  
New York U.S.A.

## The ACME Freezer

## SAFETY INTERLOCKING STOVE AND FURNACE PIPES

Fire  
Preventing

Home  
Protecting

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe. Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.

Send for Price List and Descriptive Statement.

This window display by a big Fifth Avenue New York store made profitable selling history

**T**HIS window display should impress every retailer with the selling importance of that champion of little, big profit makers—Mendets—the patented patch.

Over half a million Mendets are sold every week. One chain of stores alone sells over twenty thousand packages a week.

Mendets produce instant sales wherever displayed. They appeal to thrifty housewives, whether on 5th Ave., New York, or Main Street in a town in Oklahoma.

Mendets go on with a twist and instantly mend—water-tight forever without heat, solder, cement or rivet.

They mend graticeware, aluminum, iron, tin, and all rubber goods.

### Mendets Retail at 10c and 25c the Package

Your jobber can supply you with Mendets in the Silent Salesman Counter Cabinet at an attractive price. Ask him, or write us for the name of a nearby jobber.

Collette Manufacturing Co., Amsterdam, New York

**MENDETS**  
A PATENT PATCH

*You can make big, quick, satisfactory profits selling Mendets — from a Silent Salesman Counter Cabinet or by making a big window display like the photograph.*

**Order them by name — Mendets**

## Mirro Serves a Generation

**H**ERE is a bright and shining pot in which to brew a cheering cup of tea. It is Mirro Aluminum, of course.

Madame will welcome it, not alone for its artistic design and rich, silvery finish, but also for its durability and many conveniences.

Like all Mirro utensils, this Tea Pot will wear for years—even into the second generation, if given a little care.

Is it not a satisfaction to own so substantial and handsome a Tea Pot as this?

And note the nine features of convenience. You do not find them in ordinary aluminum ware:

(1) Sure-grip, ebonized, detachable handle which insures comfortable handling and easy pouring. ☆(2) Handle sockets are welded on, as are also (3) the spout, and

Aluminum Goods Manufacturing Company, General Offices: Manitowoc, Wis., U. S. A.  
Makers of Everything in Aluminum

☆(4) the combination hinge and cover tipper.

☆(5) Rivetless, no-burn, ebonized knob. This, with the other star features, belongs exclusively to Mirro.

(6) Flame guard protects handle when the pot is on the stove. (7) The famous Mirro finish. (8) Beautiful Colonial design. ☆(9) Famous Mirro trade-mark stamped into the bottom of every piece and your guarantee of excellence throughout.

There is satisfaction, too, in knowing that America's foremost manufacturer of aluminum ware is back of Mirro Aluminum and that this wonderful ware is the crowning result of more than a quarter-century's experience in aluminum making.

Look for Mirro Aluminum at the better stores. That is where you will find it, and at a price that is truly moderate.

# MIRRO ALUMINUM

Reflects Good Housekeeping

*The Pictorial Review, Delineator and Designer*—three great magazines that have a coast-to-coast circulation—will carry this Mirro advertisement in July. Millions of women read these magazines. Millions will see and read this advertisement. That many will buy Mirro Aluminum is a foregone conclusion. Mirro advertising, published every month in the year in publications appealing to women, is constantly bringing new Mirro customers to Mirro dealers. If you do not handle Mirro, send for catalog and our dealer proposition.

**H**ARDWARE Dealers say PYREX is the most attractive line of merchandise they sell.

It needs no introduction to your women customers.

It sells of itself and brings a quick turnover.

PYREX is a magnet that never fails to attract the eye and the mind of the housekeeper.

# PYREX

## TRANSPARENT OVEN DISHES

*Bake Everything Better*

PYREX is nationally advertised.

PYREX is guaranteed.

The leading manufacturers of metal mountings have adopted PYREX for their standard insets.

Jobbers handling housewares have complete stocks of PYREX.

Genuine PYREX is guaranteed by the name stamped in every piece.

A booklet, "How to Sell More," will be posted to buyers and salespeople, free on request.

## No Wobble! No Sway!

EVERY woman is a likely customer for the Rid-Jid Ironing Table! Be sure that she can buy from you!

Just as the back-breaking method of washing clothes over a tub has given way to the efficient electric washer, and the old-fashioned flat-iron been replaced by the modern electric or gas iron—so can every woman discard her old, wobbly, rickety ironing board and possess a Rid-Jid. For the Rid-Jid Ironing Table is as steady as the Rock of Gibraltar! It is built like a bridge, on the cantilever

principle. Although very light in weight, the Rid-Jid is so constructed that it simply can not sway nor creep with the pressure and motion of ironing.

A petticoat or skirt may be slipped full-length over the Rid-Jid because of its open end construction. And when the woman is finished ironing, she can fold it up very compactly and stow it away into a closet, where it takes up practically no room. There's a mighty good margin of profit in selling Rid-Jid ironing tables. Write us for further information and terms.

Note how compactly the Rid-Jid folds up—only 2 1/4" thick. You can store it or carry it anywhere easily and conveniently.

RID-JID PRODUCTS CORPORATION, Waukegan, Illinois

## Publicity One-Half of the Game

### Merchants Should Make Better Use of Their Opportunities

(By J. C. Dionne)

I have always had a profound feeling of commiseration in my heart for the young lawyer or doctor just starting out in his professional career, and for just one fundamental reason, and that is that the lawyer cannot advertise.

The first page of my book of business says that there are two great things that a man must do when he starts out in life, after he has decided upon the line of business activity he wants to follow:

First—He must equip himself to serve along his line of chosen endeavor.

Second—He must advise and convince the people whom he has equipped himself to serve, of that equipment and that ability.

Those two fundamentals, in my merchandisingly educated mentality, are one and inseparable. They are like Hiawatha's bow and arrow, "Useless each without the other."

The young attorney finishes his studies, gets his degree and his permit to practice, opens his office, hangs out his shingle, and then—finds himself facing the stone wall of ethical conservatism that says he shall not use the ways and means open to the business man who is "selling himself" to the world.

He cannot advertise, he cannot merchandise. He has a commodity for sale that he has spent years, and effort, and money, to create and build up, and make a thing to be valued and desired of men, and he finds that the manner in which he may offer this stock in trade to the public is restricted indeed.

He may have pep, punch, vigor, vision, enthusiasm, energy and ability galore, but he can get no quick action on them.

#### Hardware Merchant Not So Handicapped

Therefore, it seems to me, the hardware dealer should feel very grateful indeed, that there are no red tape restrictions around his business pathway, such as surround that of the young attorney. It is true that there still are dealers who act as though they thought it were unethical or illegal, or something of the kind, for them to use any intelligent effort to do business in a business way, but they have become few and far between.

It has always seemed to me that the man who has equipped himself to serve, and then does not follow that up by using his every intelligent effort to advise the public of his equipment and ability, has done wrong in three distinct ways.

He has wronged himself; he has wronged his business, and last and greatest of all, he has wronged the public whose favor he desires, because it is plain that if he has something that the public needs, and he does not offer the public this service or commodity—or both—in unmistakable manner, he may be the cause of their overlooking something of which they stood in distinct need.

#### **Merchant Should Use His Advantages**

Those are the three reasons why a merchant should advertise. You will understand, of course, that my reference to the trials of the young lawyer or doctor were not used in the hope of converting the legal profession to the use of advertising, nor with a desire to criticise that profession, but simply to recall to the dealer one distinct advantage his profession has over that of the law.

I have never been able to grasp even one hundredth part of the viewpoint of the merchant who depends for his living upon the trade of the public, yet who fails to utilize in his own behalf his one greatest sales force—publicity. To me the two great divisions of business stated previously must appeal to any mentality.

You equip yourself to serve; you make the public aware of your service. It is as plain as two plus two makes four. The merchant who thinks publicity is not necessary to the prosperity of his business, has simply declared that two plus nothing makes four.

For as surely as the Lord made small green apples, the one end is just as great and just as important as the other. Greater, in fact, because you may have a commodity of value for sale and fail to sell it because no one is aware of your possession; while on the other hand there are many men in this world who have in fact nothing to sell, but who create a demand through publicity, and go out and buy the stock to supply the demand, after the demand has been created. So it seems to me that of the two divisions that I have named, the selling end is even greater in importance than the possession of the commodity that is offered for sale.

And the man who fails to realize their well balanced value is short sighted indeed. I pity the young lawyer, although I respect him for doing his best under the circumstances he is called upon to meet. I have no respect for the fellow who can, and should, and don't.

He is convicted under the Parable of the Ten Talents.

When your fellow-business men meet in conventions of any sort, make it your business to be there. It will pay you to spare the time.

The fellow who never uses any business ideas save what he himself evolves is the fellow who gets lost out of sight in a rut.

Are you in the habit of asking your wife's opinion about your business moves? If not, you are missing some valuable help.

If you have seats for weary shoppers, you will please them, but if the seats are occupied by loafers you please nobody.

That "peak of the living cost" which the president said we had reached last fall seems to be like a mountain range. Each peak, when its summit is reached only discloses a higher peak ahead.

It is team work that counts, whether it is pulling a load up hill or selling an order to a customer. Two men may work side by side and yet not work together. The one is individual effort—the other is team work. Watch a pair of horses who do not pull together and see how difficult they make their job. Team work succeeds ten times where the individual work wins once. Be a team worker.

# WHY GOVERNMENT OWNERSHIP NECESSARILY FAILS

(By Herbert N. Casson)

Speaking quietly, without rage and prejudice, can anyone tell why it is that all government departments, in all countries, are slow, wasteful and incompetent?

There must be some basic reason for this, as the individuals in these departments cannot all be inferior to the individuals in private firms.

Almost invariably an able man becomes disabled when he is placed in a government department.

He becomes timid, procrastinating, non-committal, evasive and unprofitable. He becomes a mere chattel of routine.

Why is this?

The fact seems to me that a man simply cannot be competent in a government job, for the following reasons:

(1) There is no payment by results. There is no piecework. There is no profit-sharing. A man gets as much for doing badly as he does for doing well.

(2) There is no fear of discharge. A man may be transferred, but, as long as his conduct is satisfactory, he cannot be discharged for incompetence. Any sort of a fool can hold a job forever in the civil service.

(3) There are no profits to be made. There is no possibility of bankruptcy. If the department doesn't pay—very well. The treasury has plenty.

(4) There is no danger of losing customers. A government department does not depend upon its customers, so that it has no incentive to be quick and courteous and obliging.

(5) The main thing is accuracy, not success. A government employe has simply nothing to do with success. His one aim is to avoid mistakes. The less he does—the fewer mistakes.

(6) Time is of no consequence. As all government employes are made into clerks, they come to have a clerk's disregard for time. To clerks, as to lawyers, a delay is a relief and a comfort, the more the better.

(7) The work is impersonal. There is very little responsibility in a government office. The clerks have arranged a system whereby nobody is to blame, no matter what happens.

(8) There is no competition. A government department is always a monopoly. If it were not, it would be soon thrown aside. It has no competitors to battle with, and it can take its ease and do as it pleases.

(9) Routine is put ahead of service. In government departments all the workers (if I may use the word) are tied with red tape. They are all the slaves of a system of procedure.

(10) There is no enthusiasm. If a man stays in a government job long enough he becomes mummified. He loses all the energy and

joy of living that are so necessary to efficiency and success.

These are a few of the reasons why nationalization always has failed and always will.

Just put yourself in the place of these poor government automatons. No matter how able you are, how could you be efficient if you had—

No hope of profits;

No fear of failure;

No competitors;

No customers;

No reason to hurry, and

No danger of being found out?

Nationalization is not only a destroyer of trade and commerce. It is not only a coral reef built across the harbor of prosperity.

It is worse. It is far worse. It is a destroyer of men. It takes an able man and grinds him down until he is a clerical drudge.

It lowers the spirit and hardihood of a nation. It pauperizes. It dulls the mind and benumbs the feelings. It changes lions into rabbits. What could be worse?

## DISLIKE OF WORK

Anyone who reads not only the papers from abroad but our own daily press will be struck by the fact that there seems to be sweeping over the entire world a "dislike of work." There is not only almost impossible demands for wages being made, but a seeming unwillingness to do good work even when paid for.

The situation is much that of the aftermath of extreme mental or physical exercise by the human body. A man overexerts himself for a period of time and breaks down. Nature demands recuperation and rest. A point to remember is this: To recover health and strength, exercise must be taken. If you fall back into indolence and laziness, in time your body will atrophy. Exercise must be taken regularly and systematically in larger and larger amounts to regain health.

This is the position of the world today. It is worn and shattered by the exertions of the past four years. But strength and prosperity and the fruits of peace will not come by sitting back and expecting an industrial millenium to come while we lie and dream of it.

We must get back the use of our muscles by using them. Work will save us where waiting never will.

When you have personal and mental worth, the world will want you; you will be in constant demand everywhere. When your service has worth, you will have more opportunities for profitable usefulness than you can possibly take advantage of. When your products have worth, you will find it necessary to constantly increase your capacity in order to furnish the desired supply.

## AS BRITAIN SEES US

(From the "Efficiency Magazine" of London)

There is no good reason why we cannot compete with America in any line of manufacturing. America has her disadvantages. Here are a few:

(1) High Labor Turnover. A writer in an American magazine says that the average labor turnover in the states is 250 per cent. If an employer has 100 workers, he has to hire 250 workers during the year to keep his staff up.

As the cost of every new worker is from £5 to £40 a piece, there is an enormous waste in the states, because of the restless nature of the people.

In American factories alone this waste is said to amount to £5,000,000 a year. All this, of course, is added to manufacturing costs.

(2) Heterogeneous Labor. America is said to be the melting pot; but the fact is that people do not melt so easily. The Italian remains an Italian and the Slav remains a Slav, and the negro remains a negro.

There are eighty-three different nationalities in the factories of America; and consequently there cannot be the harmony and team play that is common in the British factories.

You can never blend Irishmen and Swedes, or Southerners and negroes, or Canadians and Mexicans. They are different types—as different as cat and dog.

(3) Rough Foremen. The foremen of American factories are drivers, rather than leaders. They are usually loud-voiced men, who boss their workers.

They are far inferior, as men, to British foremen. They swear more than they teach. They frequently treat the workers with great harshness, such as would not be tolerated in Britain.

American workers are, in most works, afraid of their foremen. They regard foremen as representing discipline rather than instruction. They look upon a foreman as a sort of works policeman.

(4) Destructive Legislation. America is seriously hampered by a host of politicians, lawyers and judges who cater to the mob. These people attack everything large and successful. They smashed the Standard Oil Company into thirty-five fragments merely because of its wealth and efficiency. This company had raised the quality of oil and lowered the price and opened up foreign markets, yet it was attacked as though it were an enemy of the human race.

Mr. Patterson, head of the National Cash Register Company—the kindest employer in America—was actually sentenced to a year in jail by a demagogue judge. He would have had to serve the sentence, too, if it had not been for the Dayton flood. Patterson took charge and saved the city, so that a higher court was compelled to set the verdict aside.

The game of politics, in America, is much more malicious and destructive than it is here; and every national company is at the mercy of forty-eight state legislatures, composed mostly of unsuccessful men.

## 80 PER CENT CO-INSURANCE CLAUSE

Considerable correspondence has taken place with members of implement and hardware dealers' associations in regard to the 80 per cent co-insurance clause. Because of a slight reduction in insurance rates many dealers have consented to have this clause attached to their policies. When asked if they understand what the provision of this clause means they invariably answer that they do not. A very clear and concise explanation of the clause follows:

The 80 per cent co-insurance clause is a guarantee by the owner that he is carrying 80 per cent of the total value on either stock or building, or both.

For the above guarantee, insurance companies allow a reduced premium rate.

In case of fire, the value of the building or stock is considered as well as to estimate the loss.

If there is less than 80 per cent the owner makes up the difference, or is himself insuring his own property for the amount of this difference, illustrated as follows:

|                                                      | Value    | 80 per ct. | Ins. in force | Loss     | Ins. Co. pays |
|------------------------------------------------------|----------|------------|---------------|----------|---------------|
| No. 1—                                               | \$15,000 | \$12,000   | \$12,000      | \$10,000 | \$10,000      |
| No. 2—                                               | 20,000   | 16,000     | 12,000        | 10,000   | 7,500         |
| In No. 2—\$12,000 is only $\frac{3}{4}$ of \$16,000. |          |            |               |          |               |
| 7,500 is only $\frac{3}{4}$ of 10,000.               |          |            |               |          |               |

This might be in three insurance companies as follows:

|                     |                               |
|---------------------|-------------------------------|
| No. 1—Insurance Co. | \$ 5,000                      |
| No. 2—Insurance Co. | 5,000 $\frac{3}{4}$ —\$7,500. |
| No. 3—Insurance Co. | 2,000                         |

|                          |                               |
|--------------------------|-------------------------------|
| Total ins. in force..... | \$12,000                      |
| The owner assumes ..     | 4,000 $\frac{1}{4}$ —\$2,500. |

|                           |          |          |
|---------------------------|----------|----------|
| Total ins. necessary..... | \$16,000 | \$10,000 |
| or 80 per cent of....     | \$20,000 |          |

If the average implement and hardware dealer kept books so he would know every night if 80 per cent of replacement value of his stock or building was covered it would be to his interest to have the clause attached to his policy, but the facts are very few dealers would ever know just what percentage of stock was covered, and in a majority of cases where losses occur the dealer would find when the adjustment was made that he had been insuring his own property.

The individual who is worth more money, is the one who is continually ambitious to beat his own record.

## THE REAL BUSINESS SITUATION EXPRESSED IN ROUND FIGURES

Just when we are hurraing the loudest for our phenomenal exports, some one had to come along and reveal that the figures didn't mean anything, as the Department of Commerce had got all muddled up and used one method of figuring one month, another the next, and still another the third month. The plain truth is that false notions have been inspired concerning the magnitude of our business boom. Everything has been reckoned in dollars, not in quantities. We have chosen to forget, as a rule, that prices have almost doubled since the war began. The Comptroller of the Currency embodies these significant figures in his report covering 1919, showing how production compared with former years:

Bituminous coal, 130,000,000 tons less than 1918.

Anthracite coal, 12,000,000 tons less than 1918.

Steel ingots, 9,000,000 tons less than 1918.

Cotton, 5,106,000 bales less than 1914.

Wheat, 76,000,000 bushels less than 1915.

Corn, 142,000,000 bushels less than 1917.

Copper, 900,000,256 pounds less than 1918.

Gold, \$10,157,900 less than 1918.

Silver, \$4,789,919 less than 1918.

## U. S. CUTLERS UNRIVALED

The modern pocket knife with the spring lock action is a comparatively new invention, the first pocket knives of this kind being made in Europe during the eighteenth century. Since the outbreak of the war in 1913 America has been taking care of its own pocket-knife needs and today claims to be making a product equal to the best which was ever imported.

Some of the earliest cutlery still extant in this country is of European make. London in England had a cutlers' corporation already as early as 1417, but the Scottish lexicographer, Macpherson, who lived in the sixteenth century, reports that by 1563 no high class table cutlery was manufactured in England. Cutlery of inferior quality was apparently made about this time in the district that is the Sheffield of today.

During the eighteenth century Sheffield took ascendancy and immediately was severely attacked by the London cutlers, who then claimed to make the best hand-made cutlery of the world. A long argument arose and finally King George the Third saw himself compelled to make a series of laws, establishing the rights of the London cutlers. It was decreed that the words "London made" might be affixed to cutlery only if this originated either in London proper or in a distance 20 miles from it. Also all hand-made cutlery was to be stamped with the sign of a hammer and the use of this brand upon any other article of cutlery or edge tool was prohibited by severe penalties.

## NAIL SHORTAGE TIES UP BUILDING

The old fable that because of a nail a shoe was lost, and because of the shoe a horse was lost, and because of the horse a battle was lost, has found a counterpart in real life.

The whole country is in the grip of a nail famine, building operations are being interfered with, building trade workers are unable to get work, and many industries are unable to go ahead with new structures. In the fruit and canning sections of the country growers won't be able to sell their produce, and thus the chain of trouble lengthens link by link.

The basic cause of the nail famine is the recent strike of the steel workers in the East.

While the U. S. Steel Corporation does not make over 50 per cent of the nails in the U. S. Two of the largest independent nail makers, the Colorado Fuel and Iron Company and the Pittsburg Steel Company, were completely tied up by the strike for many weeks.

The nail famine includes all the wire products, such as fencing wire, netting, etc., but the scarcity of these other products has not worked so widespread a hardship as the nail question.

The price has gone up enormously, but not to the apex of the price offered, the nail makers having turned down European offers at a base price of 12.75 cents a pound wholesale.

---

"I have never seen a man who could do real work except under the stimulus of encouragement and the approval of the people for whom he is working."—Charles M. Schwab.

---

## "A GUARANTEE IS A GUARANTEE"

"A guarantee is a guarantee;"

Back it up with a smile for me!—

Make it good with an awful frown,

Antagonize best folk in town!

I bought an ax at Smith's one day—

'Twas guaranteed in a cheerful way;

But back I came with broken ax;

That clerk frowned, said: "Give me the facts."

He wrote it down, long as your arm,

Just how that ax had come to harm.

Then he called Smith—O, how Smith frowned,

His look of woe would not be downed;

He groaned, in undertone—so cross;

"Suppose we'll have to stand the loss."

I bought an ax at Brown's one day;

'Twas guaranteed! I took it away!

I carried it back, and Brown just smiled  
Instead of frowning—being riled.

Patted my back, and said: "Good joke;

Lots more axes; we are not broke!"

So cheerful like I could but say:

"I'll trade with Brown another day."

# Get Your Town To "Paint Up"

Campaign in Your Community Means Civic  
Prestige and Certain Profit

(By Victor Lauriston)

**T**HE retailer who takes the initiative in a popular civic movement stamps himself in the public mind as a leader. That brings prestige, not merely to the man himself, but to his business; and prestige spells profits. They are profits, too, that nobody begrudges.

The Clean Up and Paint Up campaign is a highly popular civic movement. It means a lot to any community. It means healthier and more attractive surroundings, and better living conditions. The dealer who assists to launch such a campaign and helps to carry it to completion, secures substantial paint profits as a return for good work in helping along an important civic undertaking.

The bigger, the longer, the more earnest and practical the campaign, the greater will be the number and efforts of the progressive citizens who take part in it; and the larger will be the paint dealer's sales, and the higher his prestige. This is a movement that lends itself, as does no other perhaps, to dealer cooperation; but the dealer who starts the ball rolling, and those dealers who are the first to join in pushing and who push the hardest are the ones who profit most in a material way.

## A Word as to the Profits

They represent the practical, dollars-and-cents side of the Clean Up and Paint Up campaign. Here are a few samples of what the campaign accomplishes:

"Campaign brought big increase, at least 300 per cent," writes an Illinois dealer.

"Campaign increased our paint sales 200 per cent." So speaks Nebraska.

"Campaign increased our sales 100 per cent." This is the voice, not of one dealer, but of scores if not hundreds of dealers who have tried out the Clean Up and Paint Up campaign idea by the most practical of all tests—that of actual experience.

Increase, increases, everywhere increases—this is the record of what the Clean Up and Paint Up campaign has done everywhere for the paint business. And not merely for the paint department, but for lines from vacuum cleaners to fly swatters, from fencing to insecticides. A host of commodities and articles that help to make the community and the home cleaner and brighter and more sanitary and attractive are in greater demand as a result of the organized Clean Up and Paint Up campaign.

Some dealer in your city is in line for the chance to start a business getting, profit making movement in the local Clean Up and Paint Up campaign.

Why shouldn't that dealer be yourself?

## The First Step Is Easy

It's a lot easier than waiting till the end of the painting season and then fervently regretting that you put off till too late the starting of a campaign.

The first step is to write to the National Clean Up and Paint Up Bureau, St. Louis, Mo., for full particulars as to how to start a Clean Up and Paint Up campaign.

The rest is easier than any individual paint-selling campaign you ever carried on, and tremendously more far-reaching and effective. For with the Clean Up and Paint Up campaign you don't have to depend on your individual, unaided efforts; you link up your own work with the community and nation-wide movement in which progressive citizens all along the line are enlisted.

Every dealer is well aware that paint selling is largely a matter of paint education. Heretofore, the matter of paint education has rested largely with the dealer, in cooperation with the manufacturer. Under such circumstances, paint education—that is, instilling into the customer's mind the importance of regular painting—has been quite often a slow and tedious and difficult process. It pays—you know that—but it takes a lot of persuasion.

What the individual dealer finds hard to handle alone, the Clean Up and Paint Up campaign makes far easier by enlisting collective effort. The individual dealer can appeal only as one man talking to another; the Clean Up and Paint Up campaign enlists the growing community spirit. It not merely unites your own community in a local campaign, but it lines up your community with thousands of other progressive towns and cities which are marching ahead with faces toward the light.

It educates all the public to the value and importance of cleanliness, and it reaches, not a few selected individuals, but the entire community. It gives your individual efforts as a paint seller the backing of a nation-wide movement which is growing from year to year.

The more thoroughly you can educate your community in regard to the value and importance of painting, the larger will be your paint profits, the easier will it be to secure paint business. Now is the time to act, not merely for a better community, but for bigger paint profits.

It will pay the merchant who wants to sell more paint, and sell it with less effort, to take hold of this campaign and push for all he is worth. The Clean Up and Paint Up campaign is being taken up in many more communities than ever before; and thousands of dealers have proven its profit making possibilities.

# Playing Up Base Ball and Sporting Goods

**Every Merchant Should Interest Himself In  
the Boy Leaguers If He Wants to  
Interest Them In His Store.**

Now that the baseball season is open, Young America en masse, and many who are not so young, are taking an absorbing interest in all that pertains to the great American game. Of course, this is the harvest time for all hardware men who handle baseball supplies, and now is the time to deck your window with your catchiest offerings in order to call attention to the fact that you can supply every requirement of the baseball enthusiast. Aim to make your window display distinctive.

A mere exhibition of sporting goods laid out as for an inventory is not an especially attractive sight. Give your display that "somewhat different" touch that will cause people to stop to study it. Once you have caught their eye it is easy to interest them in your goods, provided they are of standard quality and price.

The same merchant whose window tempted baseball players at the start of the season promoted and kept headquarters for four separate baseball leagues during the summer.

At San Diego there is a man who is a living example of effective methods of salesmanship of sporting goods—and especially baseball lines. Carl Klindt, manager of the sporting goods department of the Cycle & Arms Co., is one of the busiest men in the trade. As he says "Life is just one sport campaign after another." Almost before he has completed the pushing of the supplies for one line of sport, he is busy planning another. At the opening of the baseball season—although in this delightful climate there is really no season, and the national game is played all the year around—he installed a crisp baseball display.

To the window glass was pasted a lifesize cut out of a man in baseball uniform—the same being supplied by the sporting goods manufacturer. Tacked to the rear wall was a large card:

**BASE BALL PLAYERS**  
Make This Your Headquarters  
We carry a Full Line of Baseball Supplies

The floor was covered with billows of white cloth, upon which were boxes containing single balls, and also nest of half a dozen, while down in front were shown a number of balls. There were also catcher's gloves, bats, masks, chest protectors, and sweaters.

As an effective method of "killing two birds with one stone" he also called attention to their tennis line by displaying in the window two handsome silver trophies, offered by the firm for the winners in the ladies' tennis contests which was being played of that week at one of the municipal playgrounds. Any girl or woman was eligible to enter this series. All that was necessary was to register at the store. It was not necessary to purchase any merchandise—but very naturally when any balls were to be purchased, or racquets restrung this enterprising firm was given the preference. The local papers also made mention of the matches on the sporting page, and this gave them considerable free advertising. There was no admission fee charged to see these matches and thus a large crowd of tennis fans gathered to see the sport and cheer their favorites.

## Promote Teams and Leagues

But to get back to Mr. Klindt's baseball activities. During the height of the baseball season he has four different leagues running. These play many other teams in their class, and on the wall inside the store is a big blackboard on which are chalked up the schedules for all the games. Not only the clubs under his direction, but all those of the city may post their schedule here, and thus the store becomes the headquarters for all the baseball fans of the city.

The most interesting league under his direction, which wins for him the enthusiastic support of all the youngsters—whose good will is a most valuable business asset—is the Midget League. This is composed of boys from the four different playgrounds of the city, and none of the youngsters must weigh over 90 pounds. They play a regular series of matched

games, and each member of the winning team in the series is given a prize, all of the articles being merchandise taken from the regular stock. As in the case of the tennis matches, all the ball games under Mr. Klindt's charge are written up in the sporting columns of the daily papers, and thus the store becomes known to all who read the sports—and that comprises almost every man and a good proportion of the ladies of the city.

#### He Holds a Baseball Ball

Another method which keeps the firm much in the public eye is the Baseball Ball given to all the baseball clubs of the city and their ladies at the close of each season. The announcements of this ball are printed on huge cardboard baseballs, and always attract much attention. The souvenir is also much sought after and treasured as a remembrance. It is a little booklet in the shape of a baseball, and contains the menu, the dances, the names of the members of all the clubs, the records of games, and the pictures of some of the teams and leading lights. The booklet pays for itself, as it contains the advertisements of a number of the leading firms.

A large business is done in outfitting the various clubs with uniforms and sweaters, especially the latter: "We have a large sale of sweaters for the different clubs each year," said Mr. Klindt, "Frequently among the adult clubs an order will be given to outfit the entire team, in order that they may present a uniform appearance. Navy blue seems to be the prevailing color, as it goes well with almost any kind of uniform, and the sweaters are always of high grade, warm and durable."

A very catchy ad run by this firm in the local papers, plays up their baseball line in the vernacular of the diamond:

#### OUR BATTING AVERAGE IS HIGH

We sell baseball goods of the finest make—stand back of them and guarantee satisfaction. For many years we have handled this particular line, which is the recognized standard of quality.

Our costs, as well as our service, have yet to be caught napping between first and second.

Miss Alice Wood, teacher in the District of Columbia, suspended by the board of education for teaching revolutionary doctrines, now defends herself by saying she took President Wilson for a model and that instead of being a bolshevist she was merely quoting from the president's words.

The people have a right to know the facts about Assistant Secretary of Labor Post, who turned loose over two thousand radicals convicted by the courts and ordered deported. Who is he, what is his record, why was he appointed to his present responsible position, and why is he kept in it.

#### WHAT IS CAPITAL?

Socialism is based on the premise that "capital" so-called, is unnecessary, that it represents, "profits," "stolen" by the "employer class" from the "workers" who created it, that its cost places an illegitimate burden upon society.

Which sounds very simple—only unfortunately it isn't true. Offhand, we are likely to think of "capital" as money, but it is perfectly obvious that money itself forms but a very small part of capital. A bank's capital happens to be mainly money, or an almost equally liquid equivalent, but a railroad's capital is not its money alone, but, and mainly, its roadbed, rails, terminals and rolling-stock. A manufacturing corporation's capital may be partly cash and partly machinery, raw materials and buildings. So the blacksmith may not think of his anvil and tools as his "capital," but they are, none the less.

#### Stored Up Labor

"Capital" is, in a word, stored up labor, and this labor, in even its crudest manifestations, is partly physical and partly mental. Even the ditch digger uses some intelligence along with his muscles, and the completed ditch is just as truly capital—stored up labor—as the factory building.

The capital of the skilled workman is, of course, his skill, the stored up labor of the hours he spent acquiring that skill. The capital of the physician is his professional knowledge, similarly the stored up mental labor of the years he spent in its acquisition.

All capital represents present sacrifice by some one for the sake of future reward. And, since society is immensely the gainer because of these sacrifices, it is glad to compensate the holder. The professional knowledge of the physician, the skill of the expert workman, the factory and the railroad, all deserve well of society, because society—mankind as a whole—are immensely benefitted by them.

We are not attempting to say anything, mind you, as to the relative rewards of "capital" and manual labor. Nor as to the distribution of those rewards. All we wanted to emphasize here was the necessity of clearly comprehending the nature of capital and its social necessity.

We understand that the astute Mr. Lenine has gone so far as to promulgate the doctrine that the skilled workman, by virtue of the ownership of his skill, is no longer a simon-pure member of the "proletariat," but actually bourgeois, and in essence a capitalist.

Of course he is; economically, there's no doubt about it.

The profit you exact from the public is not given you simply for the pleasure of supporting you. It is given in payment for certain services which you must render.

## COUNTRY MERCHANT ISN'T A MIDDLE MAN—HE'S AN END MAN

(By H. E. Miles)

In the pursuit of the popular indoor sport of "Find the Profiteer," there is some danger of making the small retailer the "goat" all of the time; which obviously isn't fair, but there is no telling what the practice will lead to unless merchants do something on their own account to overcome the effect of such charges.

Whatever interests are back of the campaign to swat the small merchant, the fact that they have so far been unable to make much of a dent in the country's distributing system is evidence that thinking people do not believe that the small dealer is a profiteer nor that he is an inefficient and expensive medium of distribution.

### Small-Town Merchants' Valuable Service

It is also evident that the manufacturer of merchandise has discovered that the small dealer is a part of his selling organization and that he renders a valuable service to the rural community, both by the efficient distribution of goods and by the building of community centers that will have a tremendous bearing on the future agricultural production of the country.

The country merchant is one of the most important links in the chain between the manufacturer and the consumer, he is the last link—not a middle man, but an end man—

However, there are some links in the present chain of distribution that ought to be strengthened or cut out altogether, because their weakness affects the strength of the entire system of distribution and leads to much of the misdirected accusation of profiteering.

### The Unknown Brands a Liability

Speculators, sometimes called "brokers," are, in our opinion, of questionable value as distributors, because they seldom aid in giving the service that goes with good merchandising, merely standing between the manufacturer and the dealer and often taking an unwarranted profit. Many of these speculators handle unadvertised lines and unload them on unsuspecting merchants by the representation that "you can make more money on them because you don't have to pay for expensive advertising."

In this way they force merchants to push unknown brands that have already had an excessive profit tacked onto them before they got into his hands. They are usually inferior goods, selling at about the same retail price as the advertised, guaranteed brands and consequently cause the merchant who sells them to be accused of profiteering. The salesmen who sell these unknown brands might also well be classed as "non-essentials."

Many of this type of salesmen never make a territory but once, and merchants testify that they are often guilty of stuffing their orders

to two or three times their original size, loading the merchant to the "gunwales" with non-advertised, slow-sale stuff—thereby reducing his turnover, adding to his overhead and making it impossible for him to do business on the margin that he can if he handles quick-selling, advertised merchandise and team-works with the manufacturer by local advertising.

### Other "Weak Links"

Some other traveling salesmen are in danger of becoming "weak links," and unless they make a closer study of merchandising conditions and get into closer touch with the advertising departments of their houses so that they can give the small retailer selling service along with the goods they sell, they will also have to be classed with the non-essentials.

There are many keen business men on the road—men with vision and clear, analytical judgment. They are selling the merchant just as much merchandise as he can sell and helping him sell it by giving him all the modern merchandising and advertising ideas they can get hold of.

But there is another class of salesman or "order taker" that doesn't seem to know anything beyond padding the order and telling the latest story, and he constitutes one of the weakest links.

The time is swiftly coming when every man connected with the manufacture and sale of an article will be thoroughly grounded in the merchandising principles that go with its distribution, and the marketing of that product through the small retailer will be done through an efficient, sensible Team-Work system that will leave no room for anyone to be called a profiteer.

## "MORNING EXERCISE FOR TIRED BUSINESS MEN."

(Submitted by R. M. Burton Sales Agency)

Rise 7:00 a. m.

Stand in middle of room, raise arms slowly, take deep breath and say: "D—n the Government," lowering arms in attitude of despair. Do this ten times.

Extend body flat downward on floor, cover eyes with hands, kick heels, think of the railroads and weep—till dry.

Kneel, wring hands, meditate upon labor unions and groan 150 times.

Collapse on floor, grovel vigorously, think of the income tax and gnash your teeth as in anger. Follow till exhausted.

While cooling off try to get a number on telephone.

Note—Observe this simple rules very carefully and you will reach the office every morning with most of the cares and trouble of the day already out of your system.

# The Steel Market

(Address of W. H. Stackhouse)

**T**HE records of the American Iron & Steel Institute indicate there was produced in the United States during 1918 about 43,000,000 tons of steel ingots while the statistics for 1919 show but about 35,000,000 tons of which only something under 30,000,000 tons were converted into the finished products.

This subnormal production for last year, coupled with the steel strike which was promoted and vigorously prosecuted by the American Federation of Labor beginning in September of last year, had a most direct bearing on production as this strike alone cost this country about three months production as to time and more nearly four months production as to tonnage with the result that an exceedingly heavy tonnage of unfilled orders was carried over January 1st into this year, and as a further result of additional strikes to which reference will shortly be made, there will be a still heavier carry-over of similar tonnage July 1st next into the last half of the present year.

Just as the carry-over referred to on January 1st correspondingly reduced the otherwise available capacity of the steel mills for the first half of 1920, so will the increased carry over of unfilled orders July 1st next, already referred to, to a greater extent reduce the otherwise available steel capacity to the manufacturers of this country including the exceptionally essential farm operating equipment industry and while the steel shortage during the past twelve months has been particularly acute, we are, nevertheless, exporting steel at the rate of some three million tons a year and to that extent disregarding the domestic demand therefor.

## Independent Producers Charging High Premium

Despite the frequent interruptions in the production of steel and other essential materials due to strikes, a peculiar viewpoint has been developed by the steel producers for while heretofore during recent years the Steel Corporation has dominated that industry's policy thus enabling manufacturers to contract in advance with some intelligence, we are now confronted with the possibility of a split steel market as the Corporation is indicating a willingness to contract with their regular customers for the last half of the present year on the basis of about \$2.35, Pittsburgh, for steel bars while in striking contrast with such a moderate and constructive policy, many of the independent producers seem determined to charge their regular customers for the period mentioned prices ranging from \$13.00 per ton upwards additional to the price above mentioned for steel bars.

This unprecedented situation will necessarily tend to further disturb the equilibrium of the farm implement industry and operate to the great advantage of those manufacturers

who are the exclusive customers of the Steel Corporation and to only a lesser degree to the advantage of manufacturers who are partial customers of the Corporation. The most unfortunate effect of this split steel market is that it will likely prove to be a factor in precipitating a commercial explosion in the near future.

It will scarcely be possible for the various members of the farm implement industry to sell their products at vastly different prices as competition will prevent, so it is extremely probable that those manufacturers who will be obliged to pay the exceedingly higher price for steel will be involved in more or less loss in disposing of their products.

## Pig Iron

Another vital item of raw material necessary to our industry is pig iron of which, in 1918, there was produced thirty-nine million tons in the United States while last year only thirty-one million tons was produced, out of which but 8,250,000 tons were for sale, the balance being intended for conversion into steel; in 1919 production figures being by far the lowest since 1915.

There exists today a very great shortage of pig iron and, while the price thereof ranges around \$45.00, it bears no relation whatever to production cost and is simply prompted by the idea of the producers to obtain as high a price as possible during existing exigencies.

## The Coal Situation

Last fall about the time the steel strike was settled, it was promptly succeeded by a strike of the soft coal miners which was both vigorously and savagely promoted by unnaturalized labor union officials and immediately indorsed by the American Federation of Labor in an attempt to make such strike nationwide and successful under the threat that if necessary they would starve and freeze everyone in the country in addition to paralyzing all the interstate commerce in order to impose upon the mine owner their demands for union recognition, a 60 per cent wage increase and a 30-hour week.

## Another Pretense

Thereupon our weak and vacillating Federal Government immediately indulged in a pretense of prosecuting as conspirators the labor leaders who promoted said strike and court proceedings to that effect ensued when suddenly through a compromise effected in Washington between the Government and the mine workers union, the former abandoned its prosecution of the latter and lent its good offices toward seeing that the miners obtain a wage increase ranging somewhere between thirty and forty per cent in addition to the President of the United States writing a letter and congratulating for their patriotism the very scoun-

drels whom the Government had in the first instance started to prosecute for criminal conspiracy.

The most serious result to the public of this strike and the succeeding burlesque between the Federal Government and the Union leaders already referred to, was to cause an extremely great scarcity of fuel which has existed ever since and to about an equal extent as in the case of both steel and pig iron to which reference has been made. In substantiation of this statement, it is interesting to note that while in 1918 this country produced 579,000,000 tons of soft coal, production in 1919 fell to 458,000,000 tons which is 42,000,000 tons below the country's average requirements of 500,000,000 tons.

**Result of Switchmen's Strike**

Just as the rate of production in steel, pig iron, and coal had begun to reach normal there occurred another strike and this time on the part of some 25,000 switchmen which rapidly grew to 50,000, they insisting upon an immediate allowance of a heavy wage increase and declining to avail themselves of the medium provided in the recent Railroad Act for adjusting disputes of this character.

Despite the fact that the American Federation of Labor and the Railroad Brotherhoods have both officially denounced the strikers, any settlement of the trouble is at this time not in sight but as a result of these difficulties all the manufacturers are badly crippled in their business, being unable to ship any raw material in or finished products out of their plants while most of the steel mills, pig iron furnaces and coke ovens are entirely closed down and production in these lines is practically at a standstill, with hundreds of thousands of men out of employment.

**Reasons of Car Shortage**

When the Director General of Railroads made his final report to the President of the United States March 1, 1920, on which date the roads were returned to their private owners, he indulged publicly in a practice which I am much given to observe in private by furnishing his own certificate of character, as in such report he not only stated and admitted that his extravagant administration of the transportation companies was more economical than would have been possible under private operation, but he also claimed that he returned the properties to their owners in equally as good, if not better, condition than when they had been taken over by the Federal Government twenty-six months previous.

In making this statement this self-complacent Director General entirely overlooked among other things the fact that during his administration he made but a feeble and futile effort to maintain the supply of freight cars which the railroads owned when the Government took

them over, the number thereof aggregating 2,400,000. As the maximum life of a freight car is about twenty years, it therefore becomes necessary in order to maintain this number of cars in usable order, to say nothing of providing for additional needs, to build at least 120,000 cars per year, instead of which, according to the Director General's report referred to, he only built 100,000 freight cars during the twenty-six months of his jurisdiction over the railroads, or somewhat less than one-half of the necessary number to maintain the original total of usable cars already referred to.

The result is that at present the railroads find themselves requiring for immediate use some 260,000 new freight cars yet to be built while at present cars are as difficult to obtain as is steel, pig iron and other factors vital to successful manufacture.

**Increase in Railroad Rates**

The car shortage naturally suggests to our attention the existing railroad situation and, while we have become accustomed within the last four years to pay enormous prices for things we need and outrageously high prices for things we neither need nor can afford and these being the things which we generally buy, there is now pending before the Interstate Commerce Commission a request from the railroads for an increase of 25 per cent in freight rates which demands our most serious attention as such increase is not only imperative from the standpoint of the railroads, but equally necessary in order that all industry in this country may be perpetuated and prosper.

Commercially speaking, the railroads constitute the country's basic industry for the reason that not only all business including manufacturing and mercantile, but agriculture itself, are equally dependent for their existence and prosperity upon interstate commerce which we cannot have unless railroad credits are first re-established, maintained, and the entire railroad industry rehabilitated and equipped in a manner commensurate with the enormous increase that has occurred in both industry and commerce in this country during the past few years.

**FOR AMERICAN CUTLERY**

Judge Gary, chairman of the Steel Corporation, told the stockholders at the recent annual meeting that "America can take and maintain the leading position industrially, commercially and financially of all countries of the world." His sentiments were perhaps more directly reflected when, in the course of a recent interview, he said "I think at the present time the leading cutlery makers of this country are producing razors, shears, pocket knives, carving sets, etc., of quality and workmanship fully equal to the best foreign products. I stand for the American cutlery manufacturers."

# Toys In Stock and Joys In the Stocking

Children have been taught to expect toys in their stockings. The live hardware merchant is learning to include toys in his stock. In fact he has put the cart before the horse and has turned toy stockings into "stocking toys."

The **HARDWARE WORLD** asked H. B. Morris, Sales Manager for M. Seller & Co., to put his wide-awake and tried-and-true ideas on the toy proposition into a short article for us, and we are proud to be able to turn it over to our readers for thoughtful and interested consideration. Mr. Morris knows whereof he speaks, for he has worked this matter out in practice. To introduce the article in Mr. Morris' own words, "Now, Mr. Retail Hardware Merchant, cash in on the following facts."

**I**N a town of fifteen hundred people, twenty miles from Seattle, I asked the proprietor of the leading hardware and furniture store how many washing machines, dishpans and enameled tea kettles he sold during the two weeks before Christmas. He replied, "Not many, my business at that time consists chiefly of the sale of percolators, electric irons, cutlery, roasters, carving sets and other useful items which are purchased for gifts."

Now—this is the case with every hardware man, so I asked this merchant why the requirements of the younger members of his customers' families should not be offered for sale at this time. Naturally I referred to the better grade of toys.

It so happens that this man has met with success in his business, so did not resort to the time worn alibi, "I have not the room in which to make a proper display." Instead he said he had been thinking of just that very thing and needed some advice as to what he should buy.

We drew up our chairs and I put forth this theory, "People come throughout the year to the hardware store for good goods. The nature of the hardware man's stock makes it necessary for him to stand behind the goods he sells, that they may remain sold. He does not depend upon cheap goods for his trade, hence, he is the man to offer quality toys."

The result was that Mr. Merchant left to us the selection and amount of the stock he should try out.

Having found a man who I knew had met with success in his regular lines, looking so favorably on our idea, I at once got in touch with several hardware accounts in different parts of the territory and started the ball rolling. In each instance the idea took hold.

## Another Helpful Suggestion

To one live wire hardware man whose town is not more than an hour's ride from Seattle, I put up this argument, "For the past few years you have been handling with a fair degree of success, a certain class of toys, consisting of wheel goods, construction toys, tool chests, mechanical and electrical trains. With your enthusiasm, and the reputation you have built up in this community for handling dependable merchandise, you cannot only get away with seven or eight hundred dollars worth of these toy lines, but you can by means of investing two thousand dollars in a general toy line, including

dolls, make your store the headquarters for Christmas goods. These toys will bring in the youngsters, the youngsters will bring their parents. For the parents you will already be stocked up heavily with a general line of useful and practical gifts. Thus—the toy business will increase the possibilities of other staple and holiday merchandise."

Each of the hardware men referred to met with unqualified success in the sale of their toys. They had handled the right kind of toys. No junk. They had placed their orders early, so their goods were shipped complete and at a seasonable time. They were all enthusiastic, in consequence of which each man made in his store an attractive display.

Before January 1, 1920, we had booked the orders for the following holiday season's requirements of each of these men and it is with pardonable satisfaction that I can state—Each order is considerably larger than the experimental order of last year.

People want good goods. They want good toys. A tool chest retails for fifteen dollars, hence the volume possibilities are easily seen.

Play the game, boys, but be sure you get the right kind.

## A JUST COMPLAINT

I may be wrong, but it strikes me, as a traveling salesman, that hotels as a rule are doing about as much or more profiteering as any class of business men now-a-days. Their prices as to rooms and meals are often unreasonable and exorbitant. Traveling men will welcome the time when instead of having to wire ahead for a room which leaves the price to the discretion of the hotel clerk, he can register and get a room, consistent in price with what he can afford to pay. Hotel profits during and since the war are without much doubt the largest in the history of the business, and reservations of rooms without doubt contribute to that end.

Traveling men's associations must look after the welfare of their members and as a body in convention assembled petition our representatives in Congress to pass such laws that will give us mileage rates on railroads and if possible reasonable rates and privileges at hotels commensurate with the four or five billion of dollars spent almost entirely at hotels and on railroads.

—A Salesman.

# Individual Attention For Customers

---

**How Often Does This Happen in Your Store?  
Remember, It Is Better to Make Sales Than to  
Humiliate Customers**

---

"Say, Joe, what made that man so uneasy when I was selling him a lock?" Ben Wilson stood looking after the customer who had just left the store. "He acted like he was out of sorts for some reason; yet when he came in he appeared to be in good spirits. What do you suppose I did to make him angry?"

Joe Bates, long since recognized friend of hardware clerks, paused a moment before replying.

"Well, Ben," he replied, "the man seemed alright when he entered. But he was evidently disturbed in some way before leaving. I'm glad to know that you realized the situation. So many clerks would never have noticed anything wrong, and they would have been satisfied just as long as a sale had been made. To correct a fault we must first recognize it, and your observing eye proves that you can see a mistake after it has been made."

"But what did I do?" Ben demanded, going over to the traveling man.

"You simply worked on that man's nerves, that's all. He came in intending to make a purchase, and you began to puzzle him with a lot of perplexing questions. No wonder he showed signs of anger before he left the store; I'd do the same."

## **This Happens Too Often**

"Suppose you went into a hardware store and asked for a lock, as he did. You, as a clerk, are acquainted with the many kinds of locks, but if you didn't know one from another you would object if the clerk made you expose your ignorance in the matter. Few like to advertise the fact that they don't know the difference between a padlock and a night-latch. Yet that is exactly what you did in this case. The man asked for a lock. You interrupted him to learn if he wished a padlock. He started to explain that it wasn't a padlock, and again you offer a lot of suggestions, such as rim knob, or mortise lock; yet these were not what he wanted. They only served to confuse him more."

"But I thought I'd help him out," defended Ben, "he seemed unable to say what he did want."

## **Saying the Wrong Thing**

"Yes, your intention was alright, but it was out of place. You will find that it always pays to give customers plenty of time to express in their own way what they wish to buy. Some may not be able to tell you in words, and in that case they may even draw a picture of

what they want. Such actions must be treated with tact and under no circumstances should a clerk laugh at a buyer's lack of expressive powers.

"The countless number of articles on the shelves of a hardware store all have their proper names, but the average buyer cannot know the name of each article, unless a study is made of the subject. And when a man decides that he needs a catch for a cupboard door, he is not going to take time to learn if it is called a cupboard catch or just simply a lock. He will probably enter the store and call for a lock, and if you give him time to explain, you will then learn that he really wants a cupboard catch.

"Or if you attempt to sell him a catch without first knowing that he wants something for the inside of the door, you will have a hard time learning that what he wants is an elbow catch. It requires a little patience on the part of the salesman, and the ability to grasp the customer's meaning from a meager description.

"Yes," another clerk interrupted, "your advice sounds alright, Joe, but we cannot afford to wait ten minutes while Mrs. Jones tells us that she wants a moulding hook."

"No; but there's no need of using such an exaggerated comparison, Ed. The lady wouldn't take that long to express what she wants, and surely it would be better to wait a little for her description, than to take her all over the store showing her the different kind of hooks in order to find what kind she wants.

"You might show her the cup hooks, the screw hooks or the square hooks, all of which are located in different parts of the store. And after all this walking you would finally learn that she wanted them to hang pictures on. Had you waited a moment in the first place, you would have spared her the needless walking and she would escape any embarrassment from her inability to tell what she did want."

"Isn't a clerk's ability judged by the way he handles his customers?" asked Ed.

## **Real Satisfied Customers Return**

"Yes, Ed, not so much as to the number of customers, but the way he handles them so as to assure satisfaction and continued patronage. You may sell fifty articles to as many buyers in the time another clerk may require to sell half that many. But unless satisfaction and proper attention is given every sale, you lose in the end. The slower clerk studies his customer and deals with him accordingly, whereas

you rush through the sale without giving individual attention to each buyer.

"And in time, the buyer will seek the clerk who gives him the proper attention; he will feel confident in his purchases. But if he is forced to buy hurriedly, he hesitates because he cannot use his opinion in the deal and therefore dissatisfaction is more apt to result."

"How are we to deal with the person who thinks we ought to know beforehand what he wants. You know, some people think clerks are mind-readers."

#### Wonderful Power of a Smile

Bates laughed. "You are right, Ben, many people expect a whole lot from a clerk. But again, with a little patience you can overcome these conditions. For instance, that man we have been discussing came in abruptly and said he wanted 'a lock.' He didn't say what kind he wanted, but in this case you didn't give him a chance. But suppose you had waited for him to explain more fully and he failed. Then the best way to draw him out is to smile. A real honest smile and a pleasant 'What kind, please?'"

"The smile will break the gap between you, and in most cases it brings the desired results. He will readily understand that you don't know what he wants and he will then amplify his remarks to enable you to recognize the article."

"But if you remain cool or indifferent and make a few odd guesses that are far from what is wanted, your customer will probably lose his patience. All it requires in any case is tact and judgment. The man who is impatient and cranky must be handled differently than one who is jolly and good natured; and all the time you must remember that each one's dollar helps

to swell your day's sales. Therefore you must handle them both in such a way as to make the register ring in both instances."

"I guess I was a little hasty with Mr. Wilson," confessed Ben. "He would probably have told me what he wanted the lock for, if I had only waited."

"Yes, Ben, he would have explained that he was making a cupboard and from that you would divine that he wanted a cupboard catch. As it happened you confused him by showing him padlocks and rim knob locks until he grew flustered and excited. Many men would have walked out without buying at all."

"You're right, Joe; after this I'm going to use more judgment and not try to tell the customer what he wants. They know what they want, and if we just give them time, they'll make it plain enough for us to fill the order."

"That's the stuff, Ben." Ed Miller saw the point of Joe's argument, too. "And when a man buys what he wants, he is far more satisfied that if he takes what is forced upon him by the clerk."

"Well, boys," Joe arose to depart, "I'm glad you realize the importance of individual attention in the handling of customers. And you can bank on it, your sales will grow steadily if you continue to practice the lesson you have learned this afternoon."

"Good-bye, Joe," called Ben. "We won't forget; you can bet on that."

Time is money only if you have gumption enough to make it so. There is a vast army of people who are long on time and short on cash.

#### PAINT CAMPAIGN SUGGESTIONS

No merchant can complain that the campaign committee for the Clean Up and Paint Up Campaign did not offer to supply him with full data and suggestions for the conduct of a local campaign, particularly advertising. The committee has issued circular letters, reading matter which can be reproduced in local papers, as well as a large number of attractive and convincing advertisements. Mats and electros are also offered to any dealer, to be ordered by number.

Just as an illustration we reproduce herewith a cartoon on the subject by Briggs, and this can be secured in a three column electro for 60c, with a mat of the same width for 30c. A five column electro costs \$1.50, with a mat for 50c.

Any dealer not in touch with the plans of the campaign, or any dealer wishing further information should communicate with the National Clean Up and Paint Up Campaign Bureau, Pontiac Building, St. Louis, Mo.

# Advertising Your Community

**Every Merchant Should Do His Share.**

(By W. H. Levings)

**I**N the time of King David there were those who "went down to battle" and those who "tarried by the stuff"—and those who tarried by the stuff thought that they should share alike in the spoils of war with those who went down to battle.

Direct descendants of those who tarried by the stuff are the men who attach themselves to a community in a sort of parasitic way and expect to be rewarded for the mere work of hanging on. They have no vision, no imagination, no initiative.

They risk nothing of their own in behalf of their community. They husband what they have and they depend for their increase of store upon the exertions of those who go down to battle.

And there are those who "sleep in the daytime." They have come down to us in a straight line from the days of Confucius. The Master, who was just a gentle teacher, passed up these daytime sleepers as a hopeless lot. "Rotten wood," he said, "cannot be carved."

Also we have the non-resisters. They deduce their birth from Po-yi, who retired to the edge of the North Sea when things went wrong—and he is sitting there yet, waiting for the world to become clean.

Do you know these gentlemen:

Those Who Tarry by the Stuff

Those Who Sleep in the Daytime

Those Who Are Waiting for the World to Become Clean.

They are the "Oregon Boot" on the leg of commerce—and the criminals will tell you that an "Oregon Boot" is a most effective retarder of progress.

The potential buyer of a motor car, for instance, is not interested in your motor car as such. Before you can sell him any particular brand of car you must have brought him about to the wish of owning a car—and this wish springs from the sense of pleasure or profit he will derive from the use of a car.

It is just like getting married. You cannot wish any specific kind of a wife on a man until, by roseate painting of the general state of matrimony, you have given him a connubial inclination. If he don't want a wife, then of what use is it for you to advertise that your type of wife has the valve in the head or has three or four speeds, or is water-cooled, or anything else that might help to distinguish her from any other kind of wife. But if he really and truly wants a wife you can sell him anything.

The other day I asked a man only three

cities from here, who is a world traveler, to sit down and tell me what he thought was most needed in the effort to push any city to her place of relative importance in the world. "We don't have to sit down to tell you that," he answered. "In all my travels I have found just three American cities that have the right idea.

Those cities are New York, Chicago and Los Angeles. The people of those cities are selling their towns twenty-four hours of every day. No matter whether they are at home or abroad, they are always boosting and advertising the place in which they live and do business. It has come to be a second nature to them. It is a part of their life. No city can be kept favorably before the world unless her own people keep her there. That is what is most needed in any town or city.

Make your advertising sell the district in which you do business. On the other hand, this kind of advertising, which will necessarily be more attractive than the advertising which is now done, will bring you a greater immediate return upon your investment; and on the other hand you will find that your city and your state, when once definitely sold by you to the world, will bring you and your community a volume of business that could not otherwise be achieved.

Your local, regional and national advertising are alike subject to this community treatment. If you persistently devote your best thought to the exploitation of your city and state in pictorial and textual advertising, you will keep your territory favorably before the world all the time.

Any city that is satisfied with a natural increase of trade is hastening to commercial decay. No city can achieve and hold commercial supremacy without artificial stimulus. If you are going to depend upon natural forces, the struggle is over. You can definitely estimate our future sales by consulting the mortuary records.

When once you have fairly entered upon this work of community advertising it will quickly become a keenly competitive part of your business, and one of the finest results of that will be that the quality and variety of every man's advertising will be improved and increased.

It is a work worthy of your best effort. Give your imagination free play. Imagination is vision—and with vision plus faith and courage and persistence, we can come near to moulding our own future.

## E. C. Simmons---Great Builder and Mighty Prophet

**D**URING the month just past, every heart in the hardware trade in this nation, as well as many an ironmonger's overseas, has been heavy in the thought of the passing of E. C. Simmons.

In every sense, he was the dean among merchants of hardware, and the trade's noblest figure before the world of business. As the words of sympathetic praise and acclaiming recognition have sounded on all sides, the thoughts of the thousands who knew "Dear Old Number 8," and of the ten thousands who knew of him and appreciated his worth,—these thoughts have been constantly dwelling upon his memory and his life.

One great master suggests another and strangely enough, at this time we think of that other spirit as He went about doing good in Galilee, saying, "A prophet is not without honor, save in his own country and in his own home."

Surely here is at once a kinship and a difference. E. C. Simmons was every inch a master. He was a prophet among prophets. He went about doing good. Yet how just and fine it is to feel that this prophet is not without honor in any sense. Surely the thousands of members of his own house bear him the deepest love and the tenderest memories. In his own country there has been no stint of praise, nor any shallowness of feeling.

The life of E. C. Simmons is a wonderful example to every young man in the trade, in fact to every young man who is starting on a business career. Let us look back briefly on the main facts of his wonderful life history.

Born in Frederick City, Maryland, September 21, 1839, his parents started out across the plains seven years later, to his future home at St. Louis. Here Edward Campbell Simmons had a taste of the frontier life in an undeveloped country, calling into play the strength and resourcefulness which were to come to the pioneer, the explorer, the nation builder.

He had his schooling at the early and primitive grammar schools and secondary course at St. Louis. But early his parents felt the pinch of poverty and the pressure of financial necessity and the boy started to work January 1st, 1856, over 64 years ago. It is said that when he approached Mr. Pratt of the wholesale hardware firm of Child, Pratt & Company, the proprietor asked him what he could do. He answered, "I can do as much as any boy my age. Where shall I hang my coat?" He started with the broom and dust cloth and the mop. He dusted and arranged the stock, wrapped up the

bundles, built the fires. All this while his eyes were open and his hands busy.

### Sold Goods Before the Store Opened

His enterprise and enthusiasm were evident from the start. He wanted to sell things, and the only time he could sell things was when the more experienced members of the organization were away. He asked for the key to the building to come down at six thirty in the morning and open the store. The country buyers who were on the streets early found a pleasant reception and an eager merchant to wait on them and represent the house of Child, Pratt & Company. Sales were brisk by the time the regular force arrived.

These little things summarize the later success of E. C. Simmons. "Where shall I hang my coat?" and "May I have the key?" His advancement was steady and in a few years he had doubled his salary. When the firm was reorganized ten years later, taking the name of the Waters-Simmons Co. he was a partner in the firm. In 1871 Mr. Waters retired from the business and the firm became E. C. Simmons & Company. In 1874 the Simmons Hardware Company was incorporated with a capital of \$200,000. From that time to this it is said that no new money has been put into the business, although its undisturbed earnings are worth seventy times the original capital.

Up to 1897, the development of the Simmons Hardware Company was the immediate and evident result of the active, energetic constant labor of E. C. Simmons himself. He handled a tremendous volume of correspondence. He did a huge day's work. He looked after the future, seeing thing large, even while handling this mass of detail. He picked his men and left them quite on their own initiative, yet he was always with them as counselor and advisor and friend. In wonderful combination he mixed the practical, close-focused, pusher with the far-seeing prophet and a man of vision.

### His Innovations in the Trade

The Company went through stages of growth that have set the pace for all wholesale hardware institutions in the United States as well as for large business in general. The first full line of high grade hardware under one name or trade mark was produced, starting with Keen Kutter axes in 1870. The use of traveling salesmen and their cooperation with the main house was developed to a point never before and probably never since attained by any other institution. In 1880, came the Simmons illustrated catalogues, which were the first and most effective method of meeting the competition of

**E. C. SIMMONS**

One of the master builders in world history. He has given to the United States a great business institution, to the hardware trade such an example and such leadership that his name, his fame, and his impress can never be forgotten.

catalogue and mail order houses in the hardware business.

Twenty-three years ago, the health of Mr. Simmons was dangerously threatened, and he retired from active business, turning over the management and responsibility of the business of the great institution bearing his name to his three sons, W. D. Simmons, E. H. Simmons, and G. W. Simmons, who have been in active charge since that time. The health of the sturdy, strong old man rallied and he was not by any means ready to pass on. He has watched over the destinies of his sons and his big family of business associates ever since. He has spent a few hours every day at the office—he has kept closely in touch with business affairs,—he has ever been the dean, the honored head of the hardware fraternity.

His very passing was typical of his life—simple, vigorous, strong to the end, yet reconciled to a force mightier than his own. Up until a few days before his death, he had been at his office regularly. His doctors noticed that his heart action was somewhat weaker than usual, though there was no change in his active manner or in his outward appearance. As he became weaker, his words to his family and to the nurse in attendance were perfectly normal, perfectly steady. He knew the end was very close, "I do not think you can help me. I think this is the climax." So for a day he rested, yet faded and finally Sunday morning, April 18, he went peacefully to his final sleep in the arms of his son.

#### His Cardinal Principles

Of the many factors which entered into the secret of Mr. Simmons' success, we might summarize a few that were outstanding. These cardinal principles may well be the lode star for the young man who is following along the same way that E. C. Simmons so famously traveled. First and foremost was **HARD WORK**. From early morning to late at night and always at a tremendous speed, with keen force, with alert mind, E. C. Simmons was a worker.

Then again, Mr. Simmons was guided and distinguished by the most **UPRIGHT PRINCIPLES** of personal life and business conduct. As his long associate and later rival, Saunders Norvell puts it, "I never knew him to do a mean thing." He demonstrated to the world that a man, a business man, can at the same time be a Christian gentleman—that a business can be run strictly on Christian principles. Never at any time, during its history, have any of the competitors of the Simmons Hardware Company, had anything but respect and admiration for E. C. Simmons or the Company.

An outstanding quality in Mr. Simmons' makeup was **VISION**—the ability to look way ahead. In addition, he could look deep within the men with whom he came in contact and analyse the situations in various business cen-

ters and in the branches of the trade with which he was concerned.

Added to these three cardinal virtues of Industry, Upright Dealing and Vision were appreciation of the importance of sales, his great enthusiasm, his consideration and interest in the men with whom he had to deal either as associates, customers or competitors. All of these qualities of course combine into that one, which we call genius, mastery, the highest attainment of the highest goal.

---

Work is a blessing to the man who works,  
a curse to the man who shirks.

---

Make yourself worthy of success and it will matter but the smallest bit whether you win it or not.

---

#### THE FIRST ADVERTISEMENTS

The rainbow was the first great advertisement. It had position. It had color. It held out a promise of benefit in effect: "I shall not drown you again if you behave." And then it had the value of repetition, because it is repeated in the same position and color and promise after every rain.

The next big advertiser was Caesar when he wrote on the walls of Rome for the people to read just what the senators were doing in the senate chambers. These advertisements of old contained the elements necessary in all great advertising, which are:

Advertising must be seen; it must be read; it must be understood; it must be believed; it must create a want.

Advertising is difficult because you must make the man stop thinking as he thinks and make him think as you think and interested in the thing you are interested in. It is easy to interest a man in himself. If your advertising convinces him that it is good for him, you have him sold.

Domestic prosperity depends on what we can sell to the outsider. Good advertising creates a want and a desire abroad, and thus creates employment, prosperity and happiness at home.

Don't take it for granted that the other fellow knows all about what you have. Few of us ever know enough, and many of us never know anything. Don't be afraid to keep on telling the world what you have. You have got to keep it up.

Advertising is the heart of business. If you stop a man's heart, he dies. If you stop advertising, business dies.

Bacon said: "Reading makes a full man; writing an exact man, and talking a ready man"; and let me add: "Thinking maketh a real man!" One great trouble with our American life is that we have invented every device to save us the trouble of thinking.

—Arthur Brisbane.

**A CLERK'S THOUGHTS AT CLOSING TIME**

"If I had only exercised a little more patience I believe I could have sold that fine refrigerator to Mrs. B—. Am afraid that she went down to Brown's for her refrigerator. Guess I'll have to stock up on patience and have it on tap for these patrons like Mrs. B—. Hope the boss will not find it out!"

"Wonder if the boss noticed that I was five minutes late? Wish he wouldn't always get here on the dot, then he would not smile at me in that peculiar way of his, and say: 'Want me to give you the correct time, Bassett!'"

"Possibly I could have found that odd bolt for Jones if I had gone to the basement, but it only lacked five minutes of quitting time when the old fellow came in. Hope the boss will not find out that I allowed him to go to Brown's for it."

"Stock does look rather disorderly, but possibly I can get down in the morning before the old man appears, and put things to rights. Wonder if the boss hung up that motto: 'A place for everything, and everything in its place' for my benefit?"

"Am afraid that I did exaggerate the good points of that cultivator. Wonder if Farmer Jackson meant anything when he said to me: 'Pears to me it can do anything but climb a tree?' Boss is rather emphatic when he says: 'No misrepresentation in this store!'"

"Don't see how the boss sells so many goods; he doesn't talk half so much as I do! Would not like to ask him; he might say: 'Principal reason is lack of interest.' Mighty sharp things the boss says at times, even if he does smile while he is saying them."

"I surely must think more and try to do what I would want my clerks to do if I was paying them a salary instead of being paid one."

**A CREED FOR AMERICANS**

I believe in the United States of America.  
My opportunity and hope depend upon its future.

I believe that its stability and progress rest upon the thrift and industry of its people; therefore:

- I will work hard and live simply.
- I will spend less than I earn.
- I will use my earnings with care.
- I will save consistently.
- I will invest thoughtfully.
- I will buy government securities to increase the financial strength of my country and myself.
- I will hold above barter the obligations my country thus incurs.

**TALK NATURALLY, AS IF TO ONE PERSON  
IN YOUR ADV. COPY**

Many a merchant who has no difficulty in constantly making earnest, convincing talks across his counter that result in sales, is bothered almost to death when he sits down to write his once-a-week ad for the home paper.

It is a sort of stage fright which "gets" him, when he starts to put his thoughts on paper. Now, the remedy to cure it is this: be natural. Imagine that you are talking to your customer across your counter. Write your plain, straight selling facts just as you talk them. Forget about "pretty" writing or essay writing. Be short and to the point. And always remember that your local newspaper publisher, or one of his men, is around the corner willing and anxious to help you with your ad copy.

**What an Editor Tells Us**

Speaking of newspaper men helping out the merchants with copy, a successful young newspaper owner and editor who lives in a thriving Illinois town, told us that he writes practically all the ads which his local merchants run in his paper—and he carries a fine line of ads. This is his method: He drops into the store and first asks the merchant if he has some ideas or notes for the week's ad. Often, but not always, the merchant has ideas or notes. And then they plan out the ad together.

But sometimes the merchant is too busy to do any collaborating, and it is then all up to the editor to produce that week's change of copy. At such times the scribe looks over the stock, talks to a clerk and then bases his ad on some timely, seasonable articles.

**The Foreman Helps Out**

This editor said that he in turn is helped out by his experienced foreman, who takes pride in setting up attractive ads; who really enjoys having the lay-out and style of type left to his judgment.

Practically every ad he prepares mentions from one to four high-class, standardized brands of merchandise. And he uses liberally the attractive cuts which the advertising manufacturers furnish free for the small town merchants' weekly newspaper copy. Of course, there are hundreds of other editors and foremen who are thus helping out their friends and most important clients, the local merchants, every week.

**Try Writing Your Next Ad as if to One Customer**

**HABIT**

"Habit" is hard to overcome. If you take off the first letter, it does not change "a bit." If you take off another you have a "bit" left. If you take still another, the whole of "it" remains. If you take still another, it is not "t" totally used up. All of which goes to show that if you wish to be rid of a "habit," you must throw it off altogether.

## NATIONAL INEFFICIENCY AND EXTRAVAGANCE

**You As a Business Man, Employee and Employer Must Pay Your Share**

(From the Kansas City Star)

Do you know the government spent from 1917 to 1920, 36 billion 813 million dollars? (This in 3 years).

Do you know the total appropriations from 1789 to 1917 were only 40 billions? This in 128 years including all the cost of the several wars in which we have had.

Do you know from 1917 to 1920 the government collected in taxes 13 billion 99 million dollars and borrowed 24 billion?

Do you know the government spent 150 million dollars building port terminals at Charleston, Norfolk and other places from which not a single ship sailed during the war?

Do you know the government spent 20 million dollars building a terminal up the river from Charleston which ships could not reach because the river was too shallow to float them?

Do you know the government spent 120 million dollars building nitrate plants, but did not produce a pound of nitrate for use in the war?

Do you know that the government spent 100 million dollars on tanks, powder plants, none of which produced a pound of powder used in the war?

Do you know the government spent 100 million dollars on tanks but that the first American tank reached France after the armistice?

Do you know the government spent one billions dollars on shells, but that only 17,000 American made shells reached our forces in France—about ten minutes' supply?

Do you know the government spent 117 million dollars on gas but that not a single American made gas shell was fired by the American forces in France?

Do you know the government spent 478 million dollars on guns but that only 72 American made guns reached our forces at the front?

Do you know the government spent 7 million dollars on a naval training camp in Virginia after the armistice was signed?

Do you know the government spent 70 million dollars on a powder plant at Nitro, W. Va., and sold it for 8 million?

Do you know the government spent 100 million dollars for a nitrate plant at Muscle Shoals, Ala., and that congress has been asked for additional appropriations to make this plant capable of producing fertilizer?

Do you know these items and others like them—cited by Representative E. V. Denison of Illinois in a recent speech—helped to explain the size of the expenditures for which the people are paying today and will continue to pay for years to come?

## DEFECTIVE CERTIFICATE OF NOTARY INVALIDATES CHATTEL MORTGAGE

In a recent case tried in Indiana it was held by the court that the failure of the notary public to state the name of the state and county in which he was notary, or the names of the party or parties acknowledging the instrument, failure to state that the parties acknowledged the instrument before the officer ("before me" clause was omitted) and failure to state the county in which the notary had his appointment constituted a defective certificate of acknowledgement and invalidated the chattel mortgage on an automobile in the case involved.

The notary public simply acknowledged the certificate as follows:

"Sworn and subscribed to this 12th day of November 1914." Signed John H. Immels, Notary Public, my commission expires November 13, 1917.

This is a technical matter that would mean a great deal to retail merchants having chattel mortgages on any goods which he might sell, or in fact any instrument where a notary's affidavit and seal is required. It is one of the points that a merchant should look closely to, and if he is one sufficiently informed on all these matters should have his attorney pass upon it.

## IT ONLY TAKES A MINUTE

It only takes a minute to say;

"How are you getting along?"

Or simply say: "Wheat doing well?"

To good old Farmer Strong.

It only takes a minute to say

To poultry raiser Brown,

When he is buying chicken wire;

"Hope hens are giving down!"

It only takes a minute to say,

In offhand, cheery way;

"I'm glad your boys are doing well;"

Then why not say it, pray!

It only takes a minute to say;

"I'm glad you got that job!"—

No cheery words like these can e'er

With hardware trade raise hob.

Jones carries axes, plows and hoes,

And kitchen ware galore,

As good as any stock that you

May have within your store.

But folks must human treatment have;

Folk-interest, expressed,

Has way of crystalizing in

Great hardware-interest.

Use your will to make the hill.

# Do You Sell or Do Your Customers Buy

**P**RACTICALLY every successful dealer uses advertising and window displays to draw customers into his store. But does he as universally continue using the power of suggestion after the customer enters his store?

The average customer enters a store with some particular purchase in mind. He should never be allowed to leave without some suggestions being made to him about merchandise he has not asked for. This can often be done without offense by word of mouth, but must be done tactfully and with keen recognition of the type of customer.

## Value of Suggestions

Suggestions made verbally should be in line with the customer's purchases. If, for example, the customer buys paint for a porch, the clerk might suggest the purchase of a new brush, or paint for shutters, trim or porch furniture. The clerk might go further and talk paint for the customer's house.

In suggesting the painting of a customer's house, the clerk should appeal to his pride in appearance and to his sense of economy. The latter appeal is probably best expressed by the slogan of the Save the Surface Campaign, namely, "Save the Surface and You Save All." There are many arguments in support of the thought behind this slogan. It might be pointed out, for example, that a postponement of painting might easily result in an actual loss of money in repair bills due to deterioration of unprotected surfaces.

The customer may not immediately follow the clerk's suggestion, but when he does decide to paint his house he is likely to return to the store employing that clerk for his paint materials. On the other hand, the clerks' suggestion might hurry his decision, the customer having considered painting for some time, only needing a short argument to arouse him into action.

Salesmanship in the store should not be confined to verbal suggestions or arguments. An attractive display of merchandise on the shelves and in the show cases is also an effective form of salesmanship. So is the printed suggestion or argument.

Many manufacturers issue printed selling arguments or suggestions in various forms. The majority are effective business-getters and should therefore be used whenever possible. But manufacturers have no corner on such ideas; many dealers have conceived excellent printed business appeals or suggestions.

## Methods of a Successful Dealer

A Poughkeepsie dealer keeps a row of printed cards suspended over his display counters. Each card is suspended at such an angle that a customer can easily read them so that

these men-in-type get busy as soon as the customer enters the store. The cards are placed in a frame, which is open at the top so that they can be changed easily and as often as desired.

Each card carries a brief, pointed suggestion, directing the attention of the reader to some particular line of merchandise carried, or to some bargain being offered at that time. The cards mainly serve to remind customers that certain goods are offered for sale, but in some cases their object is to effect an immediate sale. In the latter case, prices which are attractive are mentioned, or a seasonable appeal is made in such a way that an immediate purchase can be urged effectively.

Dealers are never really successful until they make the most of salesmanship in all its branches, a few of which have been touched upon in this article. Summing up, they include well-trained clerks; judicious advertising in such medium as newspapers, dodgers and follow-up letters; frequently changed and well-trimmed show windows; attractively displayed merchandise on shelves and in show cases; and, last but not least, printed or pictured selling arguments, either furnished by manufacturers or conceived by the dealer, and prominently displayed. Perhaps you have an idea along this line that you would be willing to pass along to the other fellows.

## AMERICAN KITCHEN UTENSILS WIN FRENCH WIVES

American kitchen utensils have come into favor with French housewives after a long struggle for popularity. Not yet reconciled to the loss of her age-old copper pots and pans, the Gallic menagere for a long time looked askance at the queer utensils which the American Red Cross supplied to thousands of families in the devastated districts.

Her especial disfavor was visited on the queer contraption the Americans gave her for sifting flour to take the place of her beloved wooden hoop covered with horsehair. She could not believe that a sifter with a handle was simpler or quicker than rubbing the flour through the horsehair.

A full "kitchen battery" formerly was the French bride's most prized gift. The "battery" today includes all the aluminum and tinware which make gay the advertising sections of our American household magazines.

The French woman is firm in her belief that everything new under the sun comes from America, and the trick brooms, odd shaped coffee pots, metal dish-washers, patent egg beaters and dishpans are at last winning her praises.

# Breaking Customers Delivery Habits

**Confusing Service With Expense. Good Salesmen Can Lead Buyer's Thought Into Carrying His Purchase Home.**

"Glad to see you, Ed," exclaimed Bob Evans, as he shook hands with the traveling man. "Joe and I have been waiting for you to come around again, we have several problems for you to solve."

Ed Wilson smiled; as a knight of the grip he considered every clerk on his route a friend, and they invariably looked forward to his monthly visit with pleasure.

"Well, Bob, I'm glad to hear that you fellows have been doing some thinking. You know it is easy to dodge a problem, but it takes work to overcome it. That's why I like to see you keep at a question until you get an answer. What's on your mind this time?"

"It is a question along the line of one you settled on your last trip. If you remember, you gave us a talk on Sales Suggestions, and ever since our sales have really increased by using your ideas.

## **Use Your Head More Than Your Hands**

"Just yesterday a lady came in for a paring knife. I suggested a tea strainer and she remembered that she really needed one. Then I showed her some new enameled sink strainers and showed how they would prevent stoppage of the sink; it sold the strainer. When she left the store she had bought four articles instead of the one she came in for. Such methods run your sales up in a month's time."

"You bet they do," agreed Ed. "Not only that, by your attention and apparent interest in the customer you create a better feeling that ultimately means more sales. By your suggestions you show that you are interested in the customer. In nearly every case this thoughtfulness is appreciated."

Joe Barnett, another store salesman joined the discussion.

"I wish you'd tell us how to handle what we call the 'petty delivery' customer," said Joe. "You know, the person who calls up and asks that a box of tacks be sent out right away, or a pound of nails. It costs money to make these deliveries, yet if we fail to do so people think it is a mark of poor service."

"Today," added Bob, "Mrs. Smith called twice for simple little articles that were hardly worth delivering. And Mr. Watson asked us to deliver a paint brush that he could easily put in his pocket."

"That's the way it goes, Ed, what would you do?"

"Well, boys," Wilson spoke with deliberation. "you have asked a hard question. But

you know that people abuse the word 'service' just as they do anything else. And they believe that prompt delivery of small items is a part of store service.

## **Reasons for Such a Belief**

"I believe it comes from the fact that many stores, especially drug stores, advertise what they call quick delivery. They have a boy on wheel who rushes small parcels at practically no expense. But when you have to deliver with a horse and wagon, or a motor truck, the proposition is different.

"You see, to deliver a small order it costs just as much as a large one, and you could deliver ten items for the same expense that one requires. So the problem is to eliminate the small deliveries as much as possible.

"One method would be to establish regular delivery hours. Serve notice to your customers that from a certain date deliveries would be made at a specified hour and nothing could be delivered before or after that time unless paid for by the customer."

"But that is not service," interrupted Joe. "people like to deal where they get prompt delivery. Besides they would object to your plan of charging for deliveries made outside of the regular time."

"You may think they would, Joe, but you'll find out that a customer is generally quite reasonable in such matters. If a merchant points out that delivery is an expense and if he shows how the customer can help eliminate the expense, very few people will raise an objection. Instead they will be glad to help the merchant.

## **Confuse Service With Expense**

"The trouble is that so many confuse service with expense. They forget that delivery costs the merchant just as his merchandise does. And since no one can afford to give his goods away, why should he be expected to give this service free? People should be made to realize this fact and they would be more willing to curtail the delivery of small items."

## **Charges for Special Delivery**

"You pay ten cents for a special delivery letter," observed Bob, "why not pay for special delivery of merchandise?"

"That's a good point, Bob. The government charges the public for special service, yet merchants think they can afford to render the same service without a thought of the cost. That theory could be extended to cover every delivery you make. It costs a certain amount for every trip made, and the customer could

pay for his goods and then pay for their delivery, instead of paying more for his goods to cover the delivery charge. Goods could be sold at a closer margin and the buyer would know why he paid more when he had the goods delivered, and he could save the amount if he carried them himself.

"Of course that is a big question to decide. But there are other factors to consider in this question of delivery habit. That is what it can be called, a habit. Most buyers have things sent out merely through habit. They grow accustomed to the idea and seldom think of the expense that they create. But with the help of the store salesman they can be shown how they can help themselves by helping the storekeeper.

"When a customer enters the store and you sell him what he desires, your influence has a direct bearing on his purchases. Thus he buys this hammer instead of that, or this two bladed knife in preference to a cheaper knife. Perhaps without knowing it, you control the customers actions and his purchases.

#### **Sell Your Customers Out of the Delivery Habit**

"This same influence should not cease with the close of a sale. Carry it farther and convince the buyer that he can carry the goods himself. I notice that most of you say, 'Shall we send this over, Mr. Jones?' And he replies in the affirmative because you make him believe that you consider it a privilege to make the delivery. But if you change tactics and lead Mr. Jones into another line of thought, you will accomplish a great deal toward eliminating small deliveries.

"Change your question to one like this, 'Will you take this with you, Mr. Jones,—or do you wish it delivered?' Always make a slight pause in the middle of the question, to allow Jones a chance to grasp your suggestion. You see, you are suggesting to him that he carry the goods, and he will generally follow that suggestion readily. But if you suggest the delivery, he will just as willingly accept your offer.

"So the idea is to lead him into the idea of taking the things with him. A person will accept an idea in your favor as well as in their own if it is put to them in the proper way. Hence the first part of the question should be said in such a tone as to lead the buyer toward acceptance. The latter part can be said so that it will unconsciously leave him with the impression that he doesn't want you to send the things over. And he will take them rather than have you make the trip.

"Generally when you say, 'Will you take this with you,' the buyer will say yes before you can finish the question. That is the object of the pause in the middle. It gives the customer a chance to grasp your lead and he accepts it in a natural way. And if you say the latter part in

the proper manner, he will carry the article rather than do something which you have lead him to believe he doesn't want to do."

#### **Psychology, Diplomacy or Tact**

"You can call it that if you like. But it is an established fact that if a clerk can influence a customer in his purchases, the same clerk can lead the customer toward accepting a suggestion relative to the delivery of those purchases. If you lead their thoughts during the transaction, continue to do so until they pass out the door.

"You understand that I don't mean you can make a person do just what you want him to do. But I do mean you can exert the same influence in regard to delivery that you do in the selection of goods."

"That's good stuff, Ed." Bob was pleased with the talk Ed had given. "I believe if we clerks use those tactics we can help a great deal in cutting down needless deliveries. At the present prices of gas and tires it costs something to run way out to Pine street with a pound of nails. We'll try your plan immediately, Ed."

"You bet we will," concluded Joe, as he stepped forward to wait on another customer who entered the store just then.

Even the people who profess most earnestly not to believe in advertising, are continually giving publicity in the show windows of their appearance and conversation, to their own ideals and the lack of them.

#### **GROWING OLDER**

A little more tired at the close of day;  
A little less anxious to have our way;  
A little less ready to scold and blame;  
A little more care for a brother's name;  
And so we are nearing the journey's end,  
Where time and eternity meet and blend.

A little less care for bonds and gold;  
A little more zest in the days of old;  
A broader view and a saner mind  
And a little more love for all mankind;  
A little more careful of what we say;  
And so we are faring a-down the way.

A little more love for the friends of youth;  
A little more zeal for established truth;  
A little more charity in our views;  
A little less thirst for the daily news.  
And so we are folding our tents away  
And passing in silence at close of day.

A little more leisure to sit and dream;  
A little more real the things unseen;  
A little bit nearer to those ahead;  
With visions of those long loved and dead;  
And so we are going where all must go,  
To the place the living may never know.

A little more laughter, a few more tears,  
And we shall have told our increasing years;  
The book is closed and the prayers are said,  
And we are a part of the countless dead.  
Thrice happy, then, if some soul can say:  
"I live because he has passed my way."

### TAKE ADVANTAGE OF THIS MECHANICAL AGE

When the servant girl went into the office and factory, and the washlady followed the servant girl, they brought a condition and not a theory upon the world which it didn't know how to tackle. Many thought these two useful members of society would "come back," and the lady of the house consoled herself with the pleasing reflection that her one-time helpers would soon return and the old world would jog on as before.

But it has gradually dawned upon the people that the servant girl and the washlady have gone for good, and that we must get along without them.

And then the inventors—may they live long, and may their tribe increase—jumped into the breach and proceeded to set their inventive faculties at work. They invented things literally by the hundred.

They invented vacuum cleaners, and washing machines, gas ranges and appliances, electric cookers and ironers, quick-working hot-water heaters, and what not.

They didn't simply invent one each of the above, but produced them literally by the score, if not by the hundred. The name of the clothes-washing-machine is legion and then some. New styles of vacuum cleaners are still being put on the market, and there is a veritable torrent of new labor-saving machines of every possible description.

These are the things which are taking the place of Bridget and Mary—and the housewife is buying them galore. And she will continue to buy them for many years to come. Also she will be continually buying their parts and fixtures.

This totally unexpected condition has opened up opportunities for the alert and the live wires in the trade.

Here are innumerable household appliances all at interesting prices which warrant interesting profits, and they are so absolutely necessary that many of them just must be bought by every fairly prosperous family.

### READ YOUR AD ALOUD

The next time you sit down to write any kind of an ad, pick out one person, preferably a customer whom you know very well, and write out what you would say if you were selling face to face.

Then work it over. Cut out useless words, strengthen it here and there, but don't make it stiff or unnatural! Then read it aloud. If you can say it in print naturally to a customer, it will express your individuality. It will get close to people. It will have the friendly ring of your private conversation. And thus it is bound to be an ad that will sell goods.

### "DON'T FORGET TO SELL YOUR STORE'S SERVICE"

There is one commodity that the merchant, be he small or great, seems often to forget in preparing his advertising copy—or ordering it prepared. And that commodity is service. In other words, he has service to sell as well as merchandise.

The merchant knows that his success depends on offering service to all his customers. He knows he must deliver service as well as deliver the goods, but does he, as a rule, talk about it enough in his advertisements?

#### Talk About Your Service

Of course, the greatest proportion of your newspaper space must be devoted to sales-producing descriptions of your merchandise, and the prices. That is self-evident.

Don't be satisfied, therefore, just to give service to the people who come into your store, but talk about it in your advertising.

If you make deliveries promptly, if you have clerks enough so that people need not be delayed in making purchases, if you guarantee the goods you sell—whatever may be the quality of service that you render—keep hammering away steadily on it in your advertising. It pays.

#### A Friendly, Homelike Store

A simple sentence like one of the following might serve the purpose: 'This store is operated on the basis that no sale made in it is complete until the purchaser is perfectly satisfied.'

'We have something more to offer you than just honest goods at fair prices—we can offer you also a type of service that will make you want to continue to deal with us.'

'This is a friendly, homelike store where there are good goods, reasonable prices and a sincere desire to serve each customer well.'

These are simply rough suggestions, but they illustrate the point.

### CUTLERY MARKET HAS TREBLED

According to last reports in the year of 1919 total sales of cutlery at retail prices amounted to \$150,000,000. Higher prices for material and labor are responsible. Consumption of cutlery has trebled since pre-war times. Before the war the United States market required \$50,000,000 worth of cutlery every year, to fill the demand for new cutlery and replace worn out knives, scissors and razors. While in former years as much as 20 per cent of all the cutlery found in the United States cutlery stores was of foreign make, the imports have decreased heavily and for every 100 American pocket knives, for instance, only one sold comes from abroad. Increased cutlery consumption does not mean extravagance, for in nine cases out of ten a knife is purchased for economical purposes.

# EN ROUTE TO NATIONAL AUTOMOTIVE CONVENTION

Elsewhere in this issue appears the announcement of the National Automotive Convention to be held at Del Monte, California, commencing June 10th.

Before this issue is in the hands of our readers, several hundred delegates from the eastern and middle western states will be en route to the Pacific Coast.

For many it will be their first far western trip, and many of the delegates plan to make a circuit of the entire West, visiting all the principal cities and jobbing centers from the Canadian border to Mexico.

It is a splendid education as well as a business opportunity for the trade—for the visiting members as well as the various jobbers.

At the time of going to press we do not have available all the members who will attend, but among those who are making the trip are the following:

E. G. Guthard, Edgar C. Guthard Co., Chicago.  
 Happy Rhoades, Howe Lamp Mfg. Co., Chicago.  
 Mr. and Mrs. O. D. Kimball, Mid-West Mfg. Co., Minneapolis.  
 H. B. Hamer, American Ever Ready Works, Long Island, N. Y.  
 Chas. P. Hughes, Automotive Equipment Assn., Chicago.  
 E. R. Schultz and J. Courtney, Schultz Auto Supply Co., Sioux City.  
 Mr. and Mrs. C. Rattner, Sidel-Rattner Mfg. Co., Brooklyn.  
 W. F. Edwards and party, Globe Mach. & Stamping Co., Cleveland.  
 Mr. and Mrs. H. M. Cooper, Cooper Mfg. Co., Marshalltown, Ia.  
 A. C. Delson and J. B. Victor, Victor Mfg. & Gasket Co., Chicago.  
 Mr. and Mrs. R. G. Ames, Mr. and Mrs. R. W. Proctor, Mr. and Mrs. S. D. Black, Black & Decker Mfg. Co., Baltimore.  
 E. A. Pegau, Western Auto Supply Co., Omaha.  
 R. M. Smith, National Standard Co., Niles, Mich.  
 B. Miller, Economy Auto Supply Co., Newark.  
 Mr. and Mrs. B. Cochrane, Howe Lamp Mfg. Co., Chicago.  
 Mrs. A. J. Richs, Miss N. Everhart, Giant Grip Mfg. Co., Oshkosh, Wis.  
 D. M. Peck, H & D Co., Crawfordville, Ind.  
 J. O. Donnell, Multibestos Co., Walpole, Mass.  
 C. W. Hauck, Perkins Campbell Co., Cincinnati.  
 Mr. and Mrs. H. M. Dine, Dine-De Wees Co., Canton, O.  
 Mr. and Mrs. Wm. M. Webster, Automotive Equipment Assn., Chicago.  
 Mr. and Mrs. C. O. Boynton, "X" Laboratories, New York.  
 Mr. and Mrs. S. A. Fulton, The Fulton Co., Milwaukee.  
 Mr. and Mrs. R. R. Englehart, Sieg Co., Davenport, Ia.  
 Mr. and Mrs. W. E. Wissler, Herring Motor Co., Des Moines.  
 Mr. and Mrs. B. J. Grigsby, Anderson Elec. Sup. Co., Chicago.  
 Mr. and Mrs. J. F. Galvin, Metal Stamping Co., Long Island.  
 Mr. and Mrs. O. P. Hand, Burd High Compression Ring Co., Rockford.  
 Chas. E. Faeth, Motor & Machinists' Sup. Co., Kansas City.  
 S. B. Dean, Nicola, Dean & Gregg, St. Paul.  
 Mr. and Mrs. Geo. N. Niekamp, Beck & Corbett Iron Co., St. Louis.  
 Mr. and Mrs. O. G. Stark, Inland Mach. Works, St. Louis.  
 Mr. and Mrs. L. W. Golder, Metal Specialties Co., Chicago.  
 Mr. and Mrs. H. C. Calvin, Bonniwell Calvin Iron Co., Kansas City.  
 W. P. Coghlan, American Hammered Piston Ring Co., Baltimore.  
 Geo. N. Lockridge, Kansas City Auto Supply Co., Kansas City.  
 A. J. Grimm, National Lamp Works of General Electric Co., Cleveland.  
 J. W. Lawhead, Au-to Compressor Co., Wilmington.  
 F. W. Stewart, F. W. Stewart Mfg. Corp., Chicago.  
 F. P. Gaul, Gaul, Derr & Shearer Co., Philadelphia.  
 R. J. Cahall Motor Sup. Co., Philadelphia.  
 J. W. Lawhead, Au-to Compressor Co., Wilmington.

A. A. Gross, Gross Hdwe. Co., Milwaukee.  
 C. J. Lamont, Lamont & Co., Ft. Wayne.  
 C. B. Ozias, Dayton Iron & Steel Co., Dayton.  
 A. L. Lockwood, Lockwood Ash Motor Co., Jackson.  
 W. F. Parker, Packard Electrical Co., Warren, O.  
 L. A. Hine, Hine-Watt Mfg. Co., Chicago.  
 F. H. Suter, Shadbolt & Boyd Iron Co., Milwaukee.  
 J. Prescott, Prescott Auto Parts Co., Webster.  
 Mr. and Mrs. F. W. Conant, Conant & Donelson Co., Conway.  
 H. R. Buntin, Rajah Auto Sup. Co., Bloomfield, N. J.  
 T. M. Avery, Arrow Grip Mfg. Co., Glens Falls, N. Y.  
 C. Schofield, J. B. Burwell Sup. Co., Oklahoma City.  
 M. E. Gates, Motor Equipment Co., Wichita.  
 R. C. Carlisle, Watson Weldon Motor Sup. Co., Salina, Kans.  
 J. H. Hopkins, Geller Ward & Hasner Hdwe. Co., St. Louis.  
 E. J. Smith, Jr., Gill Piston Ring Co., Chicago.  
 Mr. and Mrs. N. H. Oliver, Metal Specialties Co., Chicago.  
 George Frits, Automotive Equipment Assn., Chicago.  
 J. C. Stiles, Stiles Mfg. Co., St. Louis.  
 Geo. F. French, Champion Spark Plug Co., Toledo.  
 Chas. Rubel, Chas. Rubel & Co., Washington.  
 Mr. and Mrs. Jas. Higgins, Higgins Spring & Axle Co., Racine.  
 Mr. and Mrs. J. E. Countryman, Elite Mfg. Co., Ashland.  
 Mr. and Mrs. Jas. T. Greenlee, Imperial Brass Mfg. Co., Chicago.  
 Mr. and Mrs. W. M. Scott, Sterling Mfg. Co., Cleveland.  
 H. F. Kircher, Peoria Overhead Washer Co., Peoria.  
 Mr. and Mrs. D. A. Graves, Southern Auto Supply Co., Chattanooga.  
 Mr. and Mrs. J. Foster, Foster Auto Supply Co., Denver.  
 L. L. Dawson and party, Robinson Bros. Co., Louisville.  
 Mr. and Mrs. M. J. Judd, Raybestos Co., Bridgeport.  
 Mr. and Mrs. E. J. Smith and daughter, Gill Piston Ring Co., Bridgeport.  
 Mr. and Mrs. J. W. Fulton, Fulton-Houston Co., Chicago.  
 Mr. and Mrs. Geo. H. Wilkins, Keystone Reamer & Tool Co., Millersburg.  
 Mr. and Mrs. M. J. Tisch, Tisch Auto Supply Co., Grand Rapids.  
 Mr. and Mrs. C. J. Wollheim, Atlas Specialty Mfg. Co., Chicago.  
 Mr. and Mrs. Geo. C. Rinkenberger, Washington Auto Supply Co., Washington, D. C.  
 Mr. and Mrs. H. E. Olson, American Bureau of Engr., Inc., Chicago.  
 Mr. and Mrs. B. M. Asch and child, Asch & Co., New York.  
 Mr. and Mrs. Geo. Bouthinon, Spencer Metal Products Co., Spencer, Ohio.  
 Chas. H. Hathaway and party, Badger Mfg. Co., Milwaukee.  
 Geo. L. Brunner and party, Brunner Mfg. Co., Utica.  
 Mr. and Mrs. Noah Van Cleef, Van Cleef Bros., Chicago.  
 Geo. H. Southard, Jr., F. A. Knight, J. & B. Mfg. Co., Pittsfield, Mass.  
 Mr. and Mrs. E. M. Tarbell and niece, Tarbell-Watters Co., Springfield.

FAMED DEL MONTE LODGE

On Pebble Beach, Carmel Bay, where the members of the Automotive Association with their families will "recreate" while attending the Convention.

- R. A. Picard, A. J. Pickard Co., New York.  
 Mr. and Mrs. O. Albertson, Mr. and Mrs. B. Weldon and daughter, Albertson & Co., Sioux City, Iowa.  
 J. C. Hipp, Penn. Rubber & Supply Co., Cleveland.  
 E. C. Deardoff, Toledo Rubber Co., Toledo.  
 R. A. Picard Co., A. J. Pickard Co., New York.  
 E. R. Waterman, Splitdorf Electrical Co., New York.  
 Mr. and Mrs. W. J. Ford, Gill Piston Ring Co., Chicago.  
 Mr. and Mrs. W. J. Shay, Champion Spark Plug Co., Chicago.  
 Mr. and Mrs. W. T. Walker and family, Walker Mfg. Co., Racine.  
 E. J. Hess, The Equipment Co., Kansas City.  
 J. F. Keegan, Chicago.  
 Mr. and Mrs. L. J. Miley, Russell Mfg. Co., Chicago.  
 Mr. and Mrs. J. S. McGauley, Beck and Corbitt Iron Co., St. Louis.  
 Mr. and Mrs. A. L. Severin, Severin Tire & Sup. Co., Oklahoma City.  
 Mr. and Mrs. V. L. Johnson, Johnson Bros. Auto Sup. Co., Wichita.  
 C. R. Churchill, Electric Appliance Co., New Orleans.  
 J. Van Benshoten, John Van Benshoten, Poughkeepsie, N. Y.  
 H. H. Brenner, I. J. Cooper Rubber Co., Cincinnati.  
 W. H. Walker, Walker Mfg. Co., Racine.  
 G. W. Anderson, Inland Machine Works, St. Louis.  
 F. W. George, Shattuck-George Co., Wichita.  
 Mr. and Mrs. L. H. Van Briggie and family, Van Briggie Motor Device Co., Indianapolis.  
 D. S. Campbell, Mr. and Mrs. Chas. W. Price and Mrs. McDonald, Tuthill Spring Co., Chicago.  
 Chas. F. and Miss Hodgson, Weaver Mfg. Co., Springfield, Ill.  
 Mr. and Mrs. C. F. York, York Supply Co., Greenville, Ohio.  
 Mr. and Mrs. Chas. N. Hauck, Perkins-Campbell Co., Cincinnati.  
 Mr. and Mrs. A. S. Hatcher, A. S. Hatcher Co., Macon, Ga.  
 Mr. and Mrs. H. B. Lasher, International Magazine Co., Chicago.  
 Mr. and Mrs. W. J. Heineke, D. Moberly, L. P. Halladay Co., Streator, Ill.  
 L. F. Iverson, Piston Ring Co., Muskegon, Mich.  
 L. H. Woodruff, C. S. Mersick & Co., New Haven, Conn.  
 Mr. and Mrs. J. S. Carswell, Carswell-Hammond Mfg. Co., Boone, Iowa.  
 N. Leverone, Hill Pump Valve Co., Chicago.  
 C. H. Shruptine, Cedar Rapids Co., Cedar Rapids, Ia.  
 F. G. Norton, J. D. Grant Co., Fargo, N. D.  
 H. C. Farran and W. C. Payne, Gates Rubber Co., Chicago.  
 Mr. and Mrs. C. J. Smith, C. J. Smith & Co., St. Paul.  
 A. J. Hopkins, Canadian Fairbanks Morse Co., Montreal.  
 Lee Freudenthal, Champion Ignition Co., Chicago.  
 Mr. and Mrs. W. E. Cody, W. E. Cody Co., Columbus.  
 Mr. and Mrs. H. M. Behan, Chicago Auto Equipment Co., Chicago.  
 J. T. Spicer, Thermoid Rubber Co., Trenton, N. J.  
 Miss Julia Braatsch, Automotive Equipment Assn., Chicago.  
 D. H. Lansing, Lansing Hardware Co., Scranton, Pa.  
 J. Liston, Hippee States Co., Des Moines.  
 J. B. McMullin, Western Mfg. Co., Oskaloosa, Ia.  
 J. R. Rhoads, Terre Haute Automobile Co., Terre Haute.  
 C. R. Swisshelm, Crescent Tool Co., Jamestown, N. Y.  
 F. Mayo, Mayo-Skinner Mfg. Co., Chicago.  
 W. R. Snyder, Frank Rose Mfg. Co., Chicago.  
 A. E. Gorham, Motor Specialties Co., Waltham.  
 L. R. Upham, Williams Hardware Co., Minneapolis.  
 H. B. Burlow, Templeton, Kenly & Co., Chicago.  
 Paul G. Niehoff, Paul G. Niehoff & Co., Chicago.  
 F. E. McGuire, Alvord Reamer & Tool Co., Millerburg, Pa.  
 Mr. and Mrs. F. E. Sparks and daughter, American Chain Co., Bridgeport.  
 Mr. and Mrs. W. S. Isherwood, Champion Ignition Co., Flint, Mich.  
 Dr. and Mrs. D. H. Cunningham, Chicago.  
 Mr. and Mrs. Fred Campbell, Fred Campbell Auto Supply Co., St. Louis.  
 Mr. and Mrs. W. McCollum Chas. O. Tingley & Co., Rahway, N. J.  
 Chas. J. Parker, Western Motor Supply Co., Minneapolis.  
 J. H. Rose, S. Smith & Sons, London.  
 F. R. Hall, Northwestern Chemical Co., Marietta, Ohio.  
 Mr. and Mrs. A. C. Johnson, Apex Electrical Co., Chicago.  
 N. J. Clark, General Sales Co., Detroit.  
 Mr. and Mrs. M. Miller, Master Sales Co., Omaha.  
 Mr. and Mrs. A. M. Roper and O. R. Dunn, Roper, Harris & Dunn, Greenville, Tex.  
 R. B. Miller, Service Products Co., Springfield.  
 A. S. Lenhart, Goodrich Lenhart Mfg. Co., Hamburg, Pa.  
 H. Gooch, General Auto Supply Co., Colorado Springs.  
 L. W. Korsmeyer, The Korsmeyer Co., Lincoln.  
 C. H. Hawley, Inter-Mountain Electrical Co., Salt Lake.  
 O. J. Shields, F. W. Stewart Co., Chicago.  
 Theo. Bass, National Electrical & Auto Supply Co., Peoria.  
 W. F. Neff, Automobile Supply Co., Chicago.  
 Mr. and Mrs. H. E. Patterson, Warner-Patterson Co., Chicago.  
 F. J. Radloff, A. Nelson Mfg. Co., Chicago.  
 L. W. Perkins, Jiffy Jack Co., Cleveland.  
 L. Weidenhoff, Jos. H. Weidenhoff, Chicago.  
 H. J. Reade, Wheeler Scheller Co., Indianapolis.  
 H. E. Duffield, New Era Spring & Specialty Co., Grand Rapids.  
 W. A. White, Orr Iron Co., Evansville.

Ludwig Ilfeld who for twenty years has been a leading merchant at Las Vegas, New Mexico, has purchased the Greenclay Hardware Store in his city and will combine the two businesses. Mr. Ilfeld has recently purchased a new building and when alterations are complete the combined stocks will be carried in the new home.

For those members of the National Automotive Convention who hesitate to "brave the briny deep" at Monterey while attending the Convention at Del Monte, a special swimming pool has been constructed on the grounds, where they may sport to their hearts' content.

We strongly advise selling Hygrade Lamps at list. They're worth it.

## Satisfactory Profits From Hygrade Lamps

The Hygrade Selling Plan enables any dealer, however small his total sales, to make—even from the start—a satisfactory profit from those sales.

Hygrade Lamps are sold to you just like any other merchandise—at outright sale.

You sell them just as you sell other merchandise—at your own price and under your own terms.

Hygrade Lamps, too, are made so thoroughly that in spite of their higher cost, they yield a greater net profit because sales are so much larger and complaints so few.

**R. R. ENGLEHART**

President Automotive Equipment Association. The National Convention to be held at Hotel Del Monte this year, commencing June 10th, promises to be the most largely attended as well as one of the most interesting and helpful meetings that the Association has ever held.

President Englehart believes that all members who have not visited the Pacific Coast will avail themselves of this opportunity.

**R. A. STRANAHAN**

Vice President of the Automotive Equipment Association, who ably seconds President Englehart's efforts and invitation for the biggest Convention yet held. Mr. Stranahan and a number of his associates of the Champion Spark Plug Co. can be counted upon to practice what they preach and lend a helping hand.

### NEGATIVE VIRTUES OF AN AUTO

An auto never kicks the dashboard to flinders and then looks around, longing for more worlds to conquer; no, not even in these days of scarcity of fuel.

An auto never gets the line under her tail and holds on like the bulldog in the Hoosier Schoolmaster that "heaven and yarth couldn't make let go."

An auto never takes the bit in her teeth as a dog would a bone, and then runs away with it—not a bit of it!

An auto never shies out from a newspaper and scatters its human load all over the inhuman street.

An auto can cover more miles in a day than old Dobbin could in a full-fledged month. Even a newly-tried auto never becomes weary, but is always workbrittle. And the name of their owners is "Legion."

Why should an unjust judge say to the guileless autoist: "Fine"? This patting a man on the back with one hand and taking money out of his pocket with the other, is hard on a modest man's feelings or on a poor man's cash.

Never try a self starter on a balky horse or kindle a fire under a balky auto—you cannot reverse nature without suffering reverses yourself.

### MOTOR BRIEFS

The first New York show was held in 1900.

In 1898 gasoline sold for 6 cents a gallon.

The first four cylinder car was brought out in 1900.

In 1896 Barnum & Bailey announced that they would exhibit throughout the country a "horseless vehicle."

In July, 1898, the news was given that a plant would be built to turn out "one motor carriage a week."

Gen. Nelson A. Miles, Chauncey M. Depew, and John Jacob Astor were judges of the second automobile run to be held in this country.

In 1896 there were only four automobiles in the United States.

The first long distance tour was made from Cleveland to New York. It took from July 28 to Aug. 7.

The highway budget of the United States for 1920 is four times greater than the expenditures for similar purposes in 1919. The proposed amount will be \$633,000,000 as compared with \$125,000,000 for 1919.

This will mean greater use of passenger cars and motor vehicles than ever before and will be a great incentive to the ship-by-truck movement all over the country. If production schedules are increased so that the demand for passenger cars may be filled, this will undoubtedly be a banner touring year.

No amount of hot air by a disgusted motorist has ever inflated a punctured tire.

Nearly every customer that comes into your store for a car part or accessory is a prospect for one of the BEATS-ALL Products.

It is easy to sell any of these products when you explain to your trade that the original Stormproof qualities and Factory Durability can be restored by using any of these car ECONOMIES.

BEATS-ALL Top Dressings for Mohair, Pantasote and Imitation of Leather are the only Top Dressings in which LIQUID RUBBER is incorporated into the base. That is why they are sold on a guarantee to WEATHERPROOF and RE-RUBBERIZE the fabric.

If your jobber cannot supply you, write direct to these representatives:

## Every Can Contains Lasting Protection for the Car Owner

### Mohair Top Dressing

Will give the shabby, leaky, weatherbeaten top that new appearance and factory durability. It re-dyes and re-rubberizes, making the fabric stormproof, leaving the top soft and pliable.

Pints, 85c; quarts, \$1.50

### Re-Knu Upholstery Dressing

The Upholstery which has become worn and shabby can be made to look as good as new by a coat of this dressing. Puts on a rich and elastic surface, retains the new pliability and affords a good durable wearing finish. Dries in 15 minutes.

Pints, 75c; quarts, \$1.35

### Drab Lining Dye

It re-dyes and re-finishes the inside lining a fast light color, giving it that fresh and new appearance. Covers all stains and discolorations.

Pints, \$1.35; qts., \$2.50

### Dull-Lac Top Dressing

For all Leather and Pantasote tops—weatherproofs and re-rubberizes—softens and preserves the material, giving it that rich egg shell non-gloss finish.

Pints, 85c; quarts, \$1.50

### Knu-Lac FORD Top Dressing

A coat of Knu-Lac applied to any FORD, Rubber or Imitation of Leather Top will positively waterproof and re-rubberize it. Gives it that original pliability and wearing quality—produces a rich gloss black durable finish.

Pints, 75c; quarts, \$1.35

**WILLIAM M. WEBSTER**

Commissioner of the Automotive Equipment Association, whose untiring efforts for the past several years have resulted in placing the Association on a splendid basis in every particular. The Association is especially fortunate in having such a hard working and painstaking commissioner and secretary, for to a very great extent he is the wheel horse that must keep everything running smoothly and efficiently.

We feel sure that could they voice their feelings now, both Noah and Daniel and the other illustrious members of the Webster family, would add their approval.

## WE MUST PRODUCE

(By John S. Capper.)

The world is hungry for the things we eat, wear and use. Stark Hungry! The cupboard is bare as a bone. Prices mount to staggering figures and the cry of our worker is—more pay; shorter hours—and then a shortage shoots the price of things up another notch; again the cry—more pay; less hours. Ye Gods!

Must the vicious circle continue? Shall we never see that it is more hours we need, that to reduce the cost of things we use we must produce not less but more? I just received a cablegram from my brother in London, reading, "Market bare, prices awful, hopeless, sailing home. Oh, if Americans would grasp their opportunity."

Merchandise is even shorter on the other side than here. They have nothing to sell and their shelves are bare. They want to buy—to buy from America—to buy the things that Americans make—and the answer of our workers is—reduce our hours—44 hours a week instead of 60—a cut in production of 25 per cent.

The writer sympathizes with those who work. He understands what hard work, privation and struggle of life is—he has lived it. He has walked eight miles a day to earn fifty cents, carrying water for the workers who built the town of Pullman. He has gotten out of bed at three o'clock to milk fifteen cows on a winter's morning.

**F. T. CHASE**

Of the Frank Mossberg Co. and a member of the Board of Directors of the Automotive Equipment Association. Mr. Chase is anticipating a most interesting and helpful Convention, and considers it will be well worth the trip across the continent to visit with his associates and co-workers.

He has put in fifteen hours a day in a store. He is not a natural born plutocrat; rather—he is the son of a steel worker. He feels that he know the needs of those who struggle, but anyone would be foolish indeed who failed to see that the waste of time by carpenter, plumber or other worker, in turn raised the price of rent, raised the price of the very clothes that he himself wore, and everything used by him or his fellow worker.

Short hours in the city has made the farm worker restless; he, too, wants short hours and increased pay. May Kind Providence preserve us if farm workers ever insist on 44 hours per week, or an eight-hour day. You and I, my friend, will go hungry. I farm 800 acres and I know what short hours in the city are doing for the farm.

We may keep high wages, we may keep our present scale, and still reduce the cost of living by a simple remedy—work—good, hard, honest, faithful service—not 8 hours, rather 10 and then some. Let us for one year, at least, resolve to work, and work like H—!

Many a man works overtime to keep his auto tired.

There is only one careful auto driver. Yes, you can see him in the mirror.

When a man sits at the steering wheel for the first time he gives fancy full play, but when his machine balks he remembers that his auto is a fact, and that facts are stubborn things.

**D**IAMOND TIRES are the hardware dealer's most successful merchandised tires, because Diamond Tires are high quality tires—and the trade appreciates them. Diamond salesmen co-operate very closely with hardware dealers—and the hardware dealers know it. Diamond Tires are nationally advertised—and dealers cash in on it. Furthermore, Diamonds are giving such extra big mileage and splendid service that you have no trouble selling them and no trouble after they are sold.

## TIRES

## Clear, Sharp Illumination— Without Side Glare

**T**HE spotlight law is here. Soon it will be as universally applied as the headlight regulations, with the dominant feature "There must be no glare."

The Raydex Shaftlight, which is equipped with full circular Raydex Glassless and Glareless Lens, meets the most exacting requirements.

Each lens contains more than 9000 small metal reflectors, which eliminate all glare without absorp-

tion or diffusion of light. They concentrate and intensify the beam, providing clear illumination right where you want it.

Every dealer who has seen the Raydex pronounces it the most efficient and best looking shaftlight on the market.

Made of silver, aluminum and brass. Rattleproof, reliable and durable. Universal bracket fits any car.

The Raydex Shaftlight is one of those profitable, easy-to-sell specialties that appeal to dealers and distributors.

Order a sample.

## Saves Time and Effort In Relining Ford Cars

**N**O longer is it necessary when relining Ford brake bands to tear down the transmission. Raydex Reliners have made the Ford one of the easiest cars to reline.

Simply remove handplate of transmission cover, pull out pedal, slip Raydex between transmission and drum, then reinsert pedal.

The job is finished in a very few minutes. The dealer

or garageman can complete with ease what formerly was a long, tedious job, and he makes a quick profit.

Also he will make many such sales, for the Raydex Reliner appeals strongly to Ford owners—thousands of whom are now having their brakes Raydex lined. Many will call on you. Will you be ready?

Order a sample.

# Motor Accessories Will Sell Big

**The How and Why of This Profitable Side Line  
For the Country Store.**

(By Frank Farrington)

The business on automobile accessories is growing, and it is growing rapidly. If the number of cars in use remained the same, the business would be a growing business, but with the number of cars increased every year, right in your community, it is one of the best lines a store can stock.

Perhaps a milliner or an exclusive woman's apparel shop might not be adapted to the trade, but even at that I am not sure but certain kinds of accessories might be sold even in those seemingly incongruous places.

## **Motorists Always on Lookout**

The point is that whenever automobilists see accessories displayed they will buy there if the appeal is strong enough. The motorist is always interested in automobile affairs. He is usually considerable of an enthusiast. He is looking for new things for use about the car, and he is constantly faced by big advertising of just such things. There is no line of goods you can stock that has the general advertising behind it that backs up automobile supplies and accessories.

An important fact about the accessories trade is that mighty few garages handle such things in a way that makes a strong appeal to the user. The garage is the natural source of supply of such goods, but most garages do not display the line in show cases or make attractive window displays, or use any merchandising methods in selling them. They simply depend upon the motorists coming there to buy because it is a garage.

Well, in many towns the garages are losing their hold on the accessories business, and merchants of one sort or another are grabbing it. There are in the larger towns accessory specialty stores, and even in competition with these, other merchants, general stores, harness stores, hardware stores, etc., are getting a profitable trade in the line.

Many stores, perhaps your own store included, carry automobile accessories without realizing it. A hardware store, for example, sells wrenches. A drug store sells flashlights. You may sell dry batteries or robes or lunch kits, or some few of the thousands of items that are properly enough classified with motor equipment.

Why not get all this automobile stock together and add the important items not carried and make an accessory department out of it, even if you have not been able to depart-

mentalize the stock? When you do this, you make a new appeal to the public, an appeal not being made before. You make a direct and distinct appeal to the motorist.

There, no doubt, is someone in your store, and there may be several, who own or operate cars. Such persons will have more intelligence about handling motor supplies than someone who does not know a bumper from a torison rod. And for a salesperson who knows nothing about automobiles there is only one way to wait on a customer in that line, and that is to let the customer wait on himself—or at least to keep still unless asked a question that can be answered intelligently.

So you need to have somebody on the job who knows something about the job and can camouflage the rest. And this somebody ought to be interested in the department and in its success. It is a department that requires constant attention, just like any other live department. The more interesting and the faster turning the line naturally is, the more attention it takes to keeping it going constantly.

## **Advantage of Keeping Up-to-Date**

You cannot run an accessories department on the basis of an idea that certain items are staples year in and year out and need only to be kept in stock and they will sell themselves. Self-selling is a feature of well-advertised automobile accessories, but there is such a constant change and improvement all along this line that it is a mistake to think of any portion of the stock as being permanently staple and free from change.

When you have picked out the best line of accessories today, you have taken care of the immediate future, but must watch the trade and especially its advertising in order to know about new and improved items when they are offered by the manufactures. Before reordering on any novelty, be sure that it has not been or not being superseded by some improvement. Keep up to date along the line.

## **Buy Stock to Suit Needs of Your Community**

In order to know what and how to buy for accessories trade you should make a study of the field. Consider the type of car used mainly by your customers and the type used by people whose trade you may be able to get. Pick your stock to fit your customers. Stock up with a good variety of Ford car accessories and specialties if your customers are in the main Ford users, and be prepared for that class of trade to some extent, anyway, because there is

*The Standard Spark*

*Plug of the World*

Your customers will never demand as much  
 of AC Spark Plugs as Tommy Milton did  
 in winning the recent 50-mile Los Angeles  
 Speedway race at an average of 111.8 miles  
 per hour. But there's a world of satisfac-  
 tion in knowing that the spark plugs you  
 sell will stand up under such terrific punish-  
 ment. Moreover, the achievements of  
 AC's—spectacular and everyday—have  
 given them a pronounced preference, both  
 as factory equipment and as replacements.  
 Write today for complete dealer information.  
 Champion Ignition Company, FLINT, *Michigan*

always a big field for the sale of "trimmings" for cheap cars which are sold with comparatively little on them in the way of extras.

There are many people who are glad to buy the small parts and minor supply items for cars at a store where they are sold at their value rather than with a service charge attached. A man who wants a dry cell which he could just as well take home and put in the car himself would rather buy it at your store for the regular price than to go to the garage for it and feel under obligations to let the mechanic put it in, and usually as a result have to pay double its actual worth.

#### Women Buy Accessories

Spark plugs, battery connections, coil springs, grease cups, many other things, are salable easier in a store than in a garage. Then, too, women who have occasion to make any such purchases, where they are sent for them by their husbands when coming to town, don't find garage shopping agreeable or easy. They prefer a store. And if you know of women drivers who are interested in accessories, and they always are, you know they will look them over and ask about them in a store when they rarely, if ever, would get to see them in garages.

The feminine trade is increasing in the automobile accessory and supplies line, and it is a wise merchant who makes his plans accordingly.

In many towns with pretty good garages it is difficult to get specialties for your car, because the garages do not bother to stock up with anything until they are practically compelled to do so, and in the meantime, with no regular local source of supply, motorists get on without what they want.

#### Garages Usually Not Merchants

Oh, yes, the garage man will order for you almost anything you say you want him to get, but have you ever had much experience right along that line? You know how it works when you try to get a garage man, the average garage man, to order, say, a different spark plug or a different kind of piston rings from the kind that he keeps.

He wants to sell what he has. He is a conservative on these new developments. He says, "Oh, yes, I see advertising every day for some new thing like that and they all claim theirs is the best. I'll get it for you if you say so, but it ain't any better than what I've got." It makes it hard work to get a special order through, and it takes a long time to get the thing, because the man getting it for you is glad to see the order held up, and to have the whole proposition fall through, pleases him.

As a merchant you know how to give the trade service on special orders, and you want to get the trade and you can make it easy for motorists to get what they want through you. If you advertise strongly that you are prepared to get for a motorist any specialty he sees ad-

vertised and wants, you will interest him in a kind of service he has had little to do with hitherto.

By keeping in touch with the big advertising of makers of accessories you can be supplied with at least a minimum stock of such new things and display them along with the clipped out magazine advertisements of them, and in this way you will tie up your store to the advertising. You can make your accessories department known as headquarters for advertised accessories. If you work along that line you will make a strong appeal to the interest of the best buying class of car owners.

You find that owners sort of naturally divide into two classes, those who are enthusiastic about their cars, who might be said to specialize on their cars, and those with whom cars are more or less incidental. The latter class are interested mainly in getting the things the car needs, as it needs them in order to give good service. The former class are looking for new features just because they are new, for extra equipment that will add to appearance, speed or comfort, that will bring the old car up to date, or give it more style.

#### A Mailing List Most Useful

In arranging your mailing list of motorists, for you must have one for advertising purposes, you will do well to check it up in such a way that you can reach any class of users you want to reach without the waste circulation involved in sending advertising to those whom it would interest.

There are accessories you can sell that the garage rarely sells because it does not try to sell them. Take piston rings, for example. The average driver gives them no thought. The garage man does not suggest trying any special ring in a car. The sale is comparatively small. But you stock a few sets of rings in the best selling sizes and you call motorists' attention to the fact that they get more power for less money, get snappier action and use less gas by putting in a set of those rings, and you will make sales because you have something to offer that presents a real value. There are great opportunities for branching out along this line and getting trade that is just waiting for you to come after it—or for someone to come who has the merchandising sense that successful merchants lack, or lack incentive for using.

The point with the garage man nowadays is that if he is the right kind, he has all the business he can handle, and more than likely he is in the position where the motorist deems himself lucky if he can get a mechanic to take time to look at his car. Under those conditions the garages are not going to try to develop their accessories to trade. They feel no need for it. They are not giving it much thought. This is the time for the merchant who can handle accessories, to get busy and lay the foundation for a future trade in that field that will be mighty profitable to him for years.

# RUSCO CLUTCH FACINGS

They are dependable. This has been proven by their actual use on automotive vehicles of all kinds, from heavy truck to speedy roadster.

In congested city traffic and on hilly country roads, they have been a source of positive protection to those who drive and ride. So has been RUSCO Brake Lining.

And that protection is woven into their every strand.

### BRITISH MOTOR TAXES BASED ON ROAD WEAR

U. S. Consul William J. Grace, at Sheffield, England, cables that the new taxes, which it is contemplated will be levied on motor vehicles in the United Kingdom, will be based on the principle of road wear and tear, according to a statement of the Ministry of Transport.

The "horsepower" will be the unit for the calculation of the tax on private motor vehicles, their weight the unit for commercial vehicles, and their seating capacity for hackney carriages and omnibuses. Motorcycles will be taxed on their weight, with an extra amount for side car or trailer.

The proposals, which are likely to figure in the recommendations of the Motor Legislation Committee—a body advisory to the Ministry of Transportation—are that private motor cars should be taxed \$4.87 at normal exchange per unit of horsepower, with a minimum of \$29.20; that commercial vehicles should be taxed according to their weight, and that the tax on hackney carriages and motor omnibuses should be based on their seating capacity.

Of commercial vehicles, it is estimated that there will be 1000 motorcycles, and these will be taxed \$14.60, and the 3000 three-wheeler motors will each have to pay \$19.47. The 30,000 commercial vehicles not exceeding 1 ton, unladen weight, will pay \$77.86; the 12,000 vehicles exceeding 1 ton and not exceeding 2 tons, unladen weight, will pay \$102.20; the 20,000 vehicles exceeding 2 tons and not exceeding 3 tons, unladen weight, will pay \$121.66; while the 15,000 vehicles of between 3 and 4 tons, un-

laden weight, will be taxed \$136.26; and the 8000 vehicles of over 4 tons, unladen weight, will have to bear an annual tax of \$146.

It is estimated that there will be approximately 210,000 pleasure motor cars, and each of these will be taxed, as already stated, on the basis of \$4.87 per unit of horsepower, with a minimum of \$29.20.

There is a variety of other miscellaneous vehicles which will come within the scope of the new taxation proposals; for instance, the 10,000 commercial vehicles with the right to draw trailers, and for which a special tax of \$24.33 may be imposed. The 2,000 motor tractors may not escape with less tax than \$102.20. Road locomotives will, according to their weight, pay \$121.66 to \$146 each, while agricultural tractors used on roads for haulage will pay a \$48.67 tax, although agricultural tractors not used for haulage may escape with but a nominal duty of a few shillings.

### THE PUZZLE

When the cranker, a' cranking, keeps  
turning the crank;  
And his muscle, though lanky, keeps  
growing more lank;  
While his hair, wet and danky, keeps  
getting more dank;  
And his words, which are rankling, keep  
growing more rank;  
"Which," we say, "is the cranker, and which  
is the crank?"

The man who only half tries doesn't even  
half make good.

*A distributor may not have been appointed in your community and we may need each other*

# Trade Conquerors for American Injectors

**Captain Lamson's Field Is the World, While  
Lieutenants Beall and Lippincott Campaign  
Famously in the West**

**I**N meeting the big men and leaders in the industrial field, particularly those connected with hardware manufacture or distribution, it is always interesting to inquire into their background. How did they enter the industry or trade? What was their first job? What gift of heredity or environment prepared them for their special place in the field?

steam into water and inject the water back again into the boiler at the same pressure.

Surely that is romance for a mechanical minded boy! So young Lamson went into the plant and started with a broom and oil can. In the nearly thirty years since he has developed with the injector and with the Company until he is a member of the firm and a most import-

**F. M. BEALL**

A glance shows that he combines force, enthusiasm and a keen business sense in representing eastern manufacturers in the western territory.

**C. L. LAMSON**

Secretary and Foreign Ambassador of the Penberthy Injector Co. Mr. Lamson returns from the Orient more proud of his American interests than ever.

**J. B. LIPPINCOTT**

Familiarly known as "Lip," whose genial personality and faithful service to his principals and his customers are close to the hearts of the western trade.

C. L. Lamson, able secretary of the Penberthy Injector Company was recently in conference with J. B. Lippincott of Lippincott Beall & Company, western representatives and we put the question to each of them. "What was your first job?" "How did you happen to be where you are today?" The answer was surprising. Each man still represents the firm with which he commenced.

The Penberthy Injector Company was established in 1886 and 6 years later, in 1892, C. L. Lamson entered the organization. He had been a Detroit boy and with mechanical leanings he naturally turned to this new enterprise with such interesting and unlimited possibilities. The patentee Penberthy had devised an appliance which could take steam from the blow-off of a boiler at 150 pounds pressure, condense the

ant and invaluable one. In fact, Mr. Lamson is the only member of the firm not a member of the Johnson family. The company was founded by C. S. Johnson who took over the Penberthy patent and put it on the market. At the present time C. S. Johnson's two sons, Charles and Homer are with their father, and these four constitute the present officers.

A glimpse at Mr. Lamson's good features shows the twinkling eyes and brings out his characteristics. As is every industrial power, Mr. Lamson is level headed and decisive. He has the attribute of positive character which can be felt rather than described and which makes itself felt. He has a twinkle in his eye that is never to be forgotten. He enjoys a good story, sees a funny situation, and can laugh heartily afterward at what may have been a critical situation at the time.

# LOCKWOOD Tire Covers

Among automobile owners and dealers in all parts of the world, LOCKWOOD Tire Covers—formerly known by the trade-name, BAKER—are universal favorites, owing to their superior quality fabrics, workmanship, design and glove-like fit.

The LOCKWOOD Line is a Rapid Business Builder for thousands of dealers. Besides Tire Covers, it includes such nationally advertised Automotive Fabric Accessories as: Seat Covers, One Man Tops for Fords, Top Recovers, Side Curtains, "Summa Slip" Covers, and many others.

## Friends for Life

**N**EXT time your customer says "socket wrench"—sell him a "HEXALL" Set. The fact will stick in his mind that you put him next to a proposition that gave him 100% service and satisfaction. When admiring friends ask where he got it, he's sure to say—"Bill Smith sold me this 'HEXALL' Set; you can always depend upon Bill to give you the right dope." Try it.

That's the tonic that builds business. And, it's because folks without number all over the country are continually asking "HEXALL" users "where they got it" that "HEXALL" Socket Wrenches today are eclipsing all former selling records. True, "HEXALL" is "there" in every sense of the word—in fact, we contend that they are the best socket wrenches in the world.

Seven Sets—a "HEXALL" for every need—sold under this Guarantee of Faith:

**"Break Any Sedgley Wrench and We Repair It—No Charge"**

Speaking of "Best Sellers"—

remember the "BABY" Hammerless Revolver. This is WHY: Measures only 4 inches over all; weighs 6 oz.; shoots 6 .22 caliber short, sureshot, rimfire cartridges; hammerless; folding trigger, interchangeable parts.

**R. F. SEDGLEY, Inc. Est. 1897**

2311-13-15 North 16th St., Philadelphia, Pa.

Pacific Coast Representatives: McDonald & Linforth  
San Francisco, Cal.

"HEXALL" Ratchet Socket Wrench No. 2.  
11 Pcs.

"HEXALL" Socket Wrench No. 5—8 Pcs.

Late last fall, Mr. Lamson started off with his family literally to conquer the world for Penberthy Injectors. His itinerary included the Pacific Islands, China, Japan, Australia, India, Egypt and Europe. His entire trip as contemplated would have taken him over a year and probably two years. Unfortunately, Mr. Lamson was stricken in Manila with the influenza which developed into pneumonia. He was between life and death for some time and was naturally compelled to cancel his plans. His friends now considered it great luck that he is able to return, much less to go on.

However, if Mr. Lamson was an invalid when we met him, we should like to see him at his best for his forceful and magnetic personality are surely a threat and a challenge to his competitors—to all obstacles in his way.

All in all, Mr. Lamson is something of an injector himself—an injector of good will and of the highest type of business activity.

#### Trade Barriers in Japan

The cancellation of Mr. Lamson's plans interfered with his investigations and close contact with the situation. Yet in the short time he was over-seas, he was well able to catch the note on the wind in China and Japan.

"There is an entirely different attitude toward the American business man in China than there is in Japan. The Chinese merchant is ready to welcome you. You have to sell him to be sure and you have to convince him, but once you have sold him he is faithful and loyal. He realizes that American trade is to his advantage."

In Japan the attitude is entirely different. The American business traveler seems unwelcome. There is a suspicion in dealing with him. Of course they have their own goods but they also let you know that America and American goods are only tolerated when they are inevitable. "While in Japan Mr. Lawson had the peculiar experience of being shadowed by a rather crude secret service man. In his calls in the cities and even in traveling he was followed and watched with no stealth, but rather openly. He would be asked what his plans were when he would leave a city, and then he would be checked up. It did not bother Mr. Lamson, in fact, it rather amused him. But his impression of trade pioneering in Japan is not a happy one.

#### Growth of Lippincott, Beall & Co.

Our good friends Lippincott, Beall & Co. must not be overlooked in this connection. Their western representation of the Injector is one of those happy trade combinations so mutually congenial in handling western business.

J. B. Lippincott, or "Lip" as he is universally known to the trade, was originally connected with the Boston Woven Hose and Rubber Company. After his first experience on the road he was manager of the Philadelphia

branch and it was from there that he was sent to San Francisco some 15 years ago as western representative for the line. In this capacity he covered the entire territory west of Denver and was intimately familiar with every buyer and every condition in the territory.

After leaving school, F. M. Beall became associated with the Luthe Hardware Company, Des Moines, Iowa, where he spent about a year in stock, and then went on the road traveling Southern Iowa and Northern Missouri. In 1909 he accepted a position with Krakauer, Zork & Moye's, covering the states of Arizona and New Mexico. In three years, he had risen to Sales Manager, which position he held until May 1916, when he resigned to enter the present partnership business.

Lippincott, Beall's original offices were in El Paso and Los Angeles, Mr. Lippincott being in charge in California, with Mr. Beal in El Paso, where he had been so large a factor in the trade. Last year, offices were opened in San Francisco, Seattle and Portland in addition to the El Paso and Los Angeles offices. Mr. Lippincott took charge at San Francisco, while Mr. Beall left El Paso to take charge at Los Angeles. This year an office was opened in Honolulu.

The relations which exist between Lippincott, Beal & Co. and the Penberthy Injector Co. are typical of the spirit of confidence and mutual pride which dominates all the connections of this enterprising, wide-awake, clean-cut firm of western representatives. Their accounts are all those of established, high-principled manufacturers whose very name and connection is guarantee of the type of their representatives. And the sales organization under the able leadership of Mr. Beall and Mr. Lippincott is fast establishing the fact that an alliance between representatives of their own stamp and such manufacturers as the Penberthy Injector Co. is a combination that is as mutually profitable as it is agreeable.

#### INDIA MAN TOURS PACIFIC COAST

H. B. Hankinson, recently appointed Assistant Sales Manager for The India Tire & Rubber Co., of Akron, O., is now making a tour of the Pacific Coast as general representative of the India interests in the West. Mr. Hankinson is widely known in the Coast states, having formerly been connected with the Diamond Rubber Co., as Manager of the Seattle Branch and also as salesman in Los Angeles and Portland territories. Having previously acted as district manager, Mr. Hankinson's appointment with the rapidly expanding India organization comes with a remarkable record of accomplishments among distributors along the Atlantic seaboard. It is now his intention to cooperate with distributors in promoting trade on the Coast and to extend India representation west of the Rockies. It is reported that the India Tire & Rubber Co. will more than double its production capacity during 1920.

Colver Bros., of Holyoke, Colorado, have purchased the main hardware store at Paoli, Colorado. They expect to double the capacity and carry a stock commensurate with the new dimensions.

## On The Trail

**C**HIEF Keokuk's tawny warriors traveled a-horse. They broke new paths thru the wilds—opened up new country—broadened their territory. The horse was their "car."

Today, everywhere, America's motorists are blazing new travel trails, discovering to themselves new country, widening their vision, and enjoying all-outdoors. This is especially true when the car is shod with STANDARD FOURS—The Chief of the Tire Tribe.

These tires—made near the home of the old Indian Chieftain—partake of his qualities. They are essentially sturdy and true and hard to wear out. They travel easily over rough roads, cushioning the shocks of hard travel. America's motorists have been quick to sense the primitive strength and power of endurance built into STANDARD FOURS. This is the best asset for permanent dealers and distributors business.

*Write or wire for exclusive territory now open.*

O. C. HILLIS

Of the Electric Appliance Co., San Francisco, State Vice President of the Association in California. Mr. Hillis' sparkling eyes and hospitable smile fairly beckon the delegates westward. He will be right beside Director Robert Winestock in performing the reception honors.

J. C. STILES, Esq.

Of the Stiles-Gilliland Mfg. Co., St. Louis. Mr. Stiles and the firm which bears his name are active and faithful members of the Association, and they are willing to be shown and to show, just as all good Missourians are.

### PROFITS ON NEW APCO ITEMS

The Apco Manufacturing Company of Providence, perhaps the largest exclusive manufacturer of equipment for Ford cars in the world, are announcing some new numbers that will be of interest to the trade.

The combination muffler and cutout illustrated is made from a one piece casting, with a test valve as an integral part of the

item. All Ford cars have trouble with mufflers exploding, and this device eliminates this difficulty, besides providing an excellent means of testing for scrapes in the engine. It retails for \$5, costs the dealer \$3.65 in single lots, and \$3.39 in lots of five or more.

The Metal Oil Gauge shown is an innovation along these lines, as it is unbreakable, easily installed and the height of the oil can be determined even at night. It lists at one dollar, costs the dealer 58c, or 54c in lots of ten.

The Ford car is not equipped with a device to steady the steering column and the Apco Steering Column Brace shown in the cut will accomplish this result and make the column as rigid as that on the high priced cars. This device enjoys a tremendous sale. It lists at one dollar, and costs the dealer 66c, or 61c in lots of ten.

The margin of profit shown on Apco goods is exceptionally large and the large advertising campaign now being conducted by this company means quick sales to the four million Ford owners in this country.

A copy of their complete catalog will be sent to any Apco products, most of the good ones do.

### NEW MYERS' OIL FORCE PUMP

A new item in the line of F. E. Myers & Bro. of Ashland, Ohio, is the new Myers' Oil Force Pump. This pump has been designed and brought out to take the place of most expensive equipment. While it is not claimed that it is practical for every purpose, the manufacturers know that it is the most handy pump for private or public garages, warehouses and stock rooms and supply bases or wherever gasoline, kerosene or oil is used in large quantities.

As illustrated herewith, this is a hand pump to do away with the spigot or faucet which is in general so unsatisfactory for use on oil drums. It can handle lubricating oil, kerosene or gasoline and pumps oil direct to the measure from the steel barrel or drum.

Expensive cabinets are eliminated and at the same time the quick-closing lock eliminates any possibility of drip. As illustrated herewith, the pump is threaded for 1½ inch or 2 inch openings and screws right into the drum.

R. E. Hall is a new member of the Colorado trade, having opened a business at Brush, Colorado.

# Announcement

**THE BLACK & DECKER**  
**Nº-46**

Several years ago we were convinced that the time would come when motor trucks would run on air like automobiles.

Having the courage of our convictions, we immediately set to work to develop an Electric Air Compressor suitable for the inflation of giant pneumatic tires.

At that time (early 1918) there was no garage Electric Air Compressor known to us which was intended for continuous service. The inflation problems of that time did not require it, and investigation indicated the futility of endeavoring to adapt any known design for this heavy service.

The first "No. 46" was finished in April, 1919, and came through all the tests we could devise with flying colors. Among other things, it was run continuously for 48 hours against 150 pounds pressure.

A number of these machines were then built and installed in various garages and service stations, where they have been operating perfectly for over a year.

The giant cord rolled into popular favor sooner than we anticipated.

It was not our intention to market these Electric Compressors so soon, as we have been unable to keep up with the demands for our smaller Lectroflater Electric Air Compressors, Electric Valve Grinders and Portable Electric Drills, but under pressure of the insistent demands from old customers, we have advanced our plans somewhat, and are now in limited production on the "No. 46".

Early this year we ordered steel for a new building, to be erected as soon as possible, which will be used exclusively for large scale production of "No. 46" outfits.

It will be some time still before we can put this new plant into production, and in the meantime orders for these Outfits will be filled in rotation.

# Telling the Trade Tales of Tools

**F. W. Pratt Believes That the Toolsmith Should Know the Trade and the Salesman Know the Tool**

**M**ANY of us who are retail merchants feel that an area of 50 feet by 200 feet is quite considerable when it comes to keeping track of stock and looking after tools and customers. Some others of us who are wholesalers or jobbers devote our attention to the trade in a certain section of the country, perhaps several counties, or a state, or in some cases quite a section of the United States. When it comes to having your tool stock on various walls, bounded by the Atlantic and the Pacific Oceans, the Canadian and Mexican borders, the problem of looking after the stock and keeping track of the customers is all of one man's job. Yet that is the little task that F. W. Pratt has had wished upon him in behalf of the Goodell-Pratt Co.

For some time the Goodell-Pratt Co. have been known to the trade in every section with their stock of 1500 good tools. Of course we mean 1500 different kinds of tools. That limitation, however, has been outgrown, and these goodly toolsmiths of Greenfield have been adding to their line and increasing it rather than reducing it in the last years. Now there are "1500 and 150 more."

To get back to Mr. Pratt, Jr., son of Wm. M. Pratt, president of the company. Just to visit the Goodell-Pratt tools at work all over the United States and get the personal opinions of the users and distributors of the tools, Mr. Pratt has been making the rounds of the country during the last two months. Starting out from Greenfield in April, he jumped across the continent by the northern route, visiting the trade in each important center as he went. Arriving at Seattle he turned at right angles and went down the Pacific Coast as far as San Diego. Then he turned east again and visited the trade of the Southwest, and then the Middle West, and by June he was back again at his desk at Greenfield.

Although Mr. Pratt is a young man, he has been in the tool business for many years. He is one of those boys who spent his grammar school

vacation at the factory, or sealing letters in the office. With this early experience and getting the fever early, he did not take the college years and the trip to Europe that many a young man in his position would be able to claim, but he got right into the business.

He says in his own words briefly: "I was born in 1894, and have been busy ever since, either working or getting into trouble. I have worked at all kinds of jobs here in the factory, and I could not say when I really did start in."

At any rate, there are ten solid years of tool experience behind him, during which time he has thoroughly familiarized himself with such branches of the business as the stock, advertising department, factory and sales department.

## **An Army Officer in France**

This does not take into account the time during the war when young Mr. Pratt took a rifle out of Plattsburg camp and after several months chafing in Texas went over to France with the 30th Division. This war experience is still very vividly in Mr. Pratt's mind, and no wonder.

Commissioned a lieutenant in the infantry, he avoided chance after chance to be assigned to noncombatant branches of the service, and as a result he finally went over with a division whose regiments were broken up to serve with the Allies. It chanced that his outfit was destined to join the British on the Flanders front and there he was right in the thick of the fight month after month. In several

of the engagements his company was reduced to a handful of men. He was often in command of the company and in charge of larger fighting units.

For any young man this active fighting experience in the war shall never be forgotten, but for a tool man there is double importance in this intimacy with steel and men as they were mixed together on the western front.

## **W. M. Pratt Was Born to Tools**

As to the growth of the Goodell-Pratt Co. and the interesting background behind W. M.

**F. W. PRATT**

The steady, sturdy junior member of the Goodell-Pratt family, whose clean-cut features, whose outspoken manner, whose frank and square way of analyzing situations and meeting new friends is typical of the great institution to which he was born, and of the "1500 and 150 more" tools which they produce.

Pratt, founder and active manager of the company, the trade knows the story.

Born at Shelburne Falls, Mass., just at the close of the Civil War, "W. M." came into the tool business by heredity. His grandfather used to make Pratt Honest Axes, his father was superintendent at the Mayhew factory for some forty years.

After twenty years in Massachusetts in school and in the tool factories, he wanted a wider experience and broader outlook, so he started west. In a few years he was absolutely separated from anything that had to do with New England or with tools. About 1890 we find him married and settled in South Dakota as a banker. With the death of his father he returned to Greenfield, and got into the game again as a traveler for Wells Bros.

Goodell Bros. Co. had been operating for some time at Greenfield as manufacturers of automatic drills, automatic screw drivers, hand pressed drills, in a small shop employing some 15 men. In 1895 W. M. Pratt bought an interest in Goodell Bros. and two years later the Goodells retired from active management and the name became Goodell-Pratt Co.

#### Remarkable Growth in Thirty Years

This was a little over twenty years ago, and the great nationally notable institution of today has grown and developed from the mere machine shop of the ninety's. Nearly one thousand employes now take the places of the original dozen.

The principles that have ruled the growth to the Goodell-Pratt Co. and Goodell-Pratt tools are the same principles that have always animated "W. M." and are now in evidence in "F. W."—frank dealing, hard work, the maintenance of standard of quality always before any considerations of price, as well as watchful attention to the trade and to the use that the tools are to be put to. It is thus that satisfaction and confidence have been gained.

Such a trip as that which young Mr. Pratt has just completed is typical of the Goodell-Pratt standard. The company has always made it a point to know the trade intimately, not through reports of salesmen or by correspondence, but through personal contact by the different men in the firm.

It was indeed a pleasure and a privilege to meet Mr. Pratt on his way, and that same pleasure was enjoyed by many members of the trade. There is something personal for them all in the Goodell-Pratt tools that they sell now. There is something of the frank, outspoken, clean-cut New England stock which is characteristic of Mr. Pratt and his son right in the drills, hack saws and tools that come out of the warehouses and go over the counter.

#### Tools the Aristocracy of Hardware

As a result of such a trip there should be a new energy in every merchant's handling this tool stock. They should not give away to the

present tendency of neglecting their tool stock for the by-ways of specialties. With no slight to these later members of the hardware merchant's stock-in-trade, he must bear in mind that the tool business is the pedigree of the real hardware man.

To sell tools, urges Mr. Pratt, one must more than carry a lame stock at the back part of the store. The men in the tool department must know and love tools. They must also know tool users of the community. Furthermore the tools themselves must be introduced and featured just as specialties in the stock are brought before the public. Just as a good tool customer is the man who knows what he is buying and appreciates value and quality, so the good salesman and merchant of tools knows what he is selling and really sells his tools from a stock that has been wisely selected and carefully maintained.

#### BLACK & DECKER AT BOSTON

The development and spread of the Black & Decker Mfg. Co. organization has been nothing short of meteoric during the last year. Every month the company has an announcement of a new branch office. This month it is at Boston, Mass., to cover the northeastern territory. D. G. Haywood, the company's northeastern district manager will have headquarters at the new office, and a service station for the Black & Decker products will be maintained at the same address to give prompt and efficient service to the company's New England trade.

#### A SAFETY VALVE CUT-OUT

The Roberts Cut-out and safety Valve is designed to prevent mufflers from bursting and also to relieve back pressure. It replaces the exhaust end of the regular muffler and is equipped with a spring-controlled "pop valve," which acts automatically. When raw or burnt gases enter the exhaust pipe faster than they can pass through the muffler, the pressure opens the spring valve and permits the gas to pass out without damaging the muffler. As soon as the pressure is relieved the valve automatically returns to its place.

This attachment also serves as a cut-out operated by a hand control at the driver's seat, which is attached to the valve by a light cable. It is the only cut-out that can be attached without cutting the exhaust pipe. The cut-out valve is at the exhaust end of the muffler and when open there is a clear, unobstructed passage. It is leak-proof and cannot rattle or work loose. The device can be very easily attached. All that is necessary is to remove the old muffler head and loosen the nut on the center rod. The Roberts Cut-out and Safety Valve is made by the G. E. Roberts Co., 172 Fifth St., Milwaukee, Wisconsin.

## *Stanwood Products*

Here are several little accessories that add greatly to the comfort, convenience and satisfaction of the driver whose car is equipped with them.

**STANWOOD ADJUSTABLE ACCELERATOR FOOT REST** sells at sight. The user receives lots of comfort from this device—relieves leg muscle tension, acting as a foot support. It can be adjusted to the position of any driver. It is a reliable safety device, preventing unintentional acceleration over rough roads, crossings. Price, each, \$1.60, List.

**STANWOOD PEDAL PLATE** shown above in connection with Accelerator Foot Rest, is used when the accelerator is not placed near enough to the clutch and brake to use the Heel Plate. It is constructed same as Stanwood Safety Step Plates. Price, each, \$.50, List.

**STANWOOD SAFETY STEP PLATES** are indispensable as safety devices—prevent slipping when entering and leaving the car. They also protect the covering on the running board.

Step Plates are subjected to rough treatment and should be built to stand it. Stanwood Plates consist of rubber covered sheet steel bases, from which solid rubber longitudinal ribs project. They always look well and do not discolor and mat down. They outlast any other step plate on the market.

Stanwood Safety Step Plates are manufactured in a variety of styles, and are priced to meet the requirements of any car owner. Type A, \$3.70; B, \$2.65; C, \$1.60; Ford Type, \$1.60, List.

**STANWOOD ACCELERATOR HEEL PLATE** furnishes a stable position for the heel when operating the clutch and brake. It prevents wearing hole in floor covering of car. It is built like Stanwood Safety Step Plates. Price, each \$.85, List.

**STANWOOD CONFORMABLE HAND PADS** add a pleasing appearance to a car. They prevent finger marks and wear on finish of car. Made of leather in various grains. Price, each, \$.90 to \$1.80, List.

### PEARL HOLLOWAY—A TRUE DAUGHTER OF THE NEBRASKA TRADE

The **HARDWARE WORLD** has been fortunate before in publishing a poem by Pearl Holloway, proprietor of the L. F. Holloway Hardware Company at Fremont, Nebraska. Better to put it that our readers are fortunate in this early, formal and brief instruction to Miss Holloway.

Now it is our pleasure to get better acquainted. Therefore, we introduce Miss Holloway in person. She is the happy and helpful daughter of a hardware merchant of long standing and hearty respect among the trade in his state. She owns a little stock in the company, as does her sister, Carrie E. Holloway, vice-president. Miss Pearl is also her father's stenographer.

Having been brought up in the hardware business, and growing with her father's business, she has come to love the hardware store, to put her heart and soul in it, and to see only joy and happiness and sunshine in the shiny tin goods on the tables and in the polished tools upon the wall. Miss Holloway is equally happy and fortunate in her avocation, for she has been in the habit of verse writing for some time and occasionally writes short stories and expresses herself in other literary forms.

We are all glad to know you, Miss Holloway. We are proud of you as a true heart, a fine mind, and the very highest type of which the trade can boast!

#### HARDWARE SUNSHINE

(By Pearl Holloway)

O, the mystical charm of the Hardware Store!  
I have tested it many a time,  
Though of other subjects there are a score  
More suited, perchance, to rhyme.

But the hardware store with its stoves so bright  
And its rows of shining tin,  
Is a sight that cheers me day or night  
Whatever state I'm in.

It always seems that a hardware store  
Holds out a friendly hand,  
And says so clear, "We're glad and more  
To see you in our land."

So be sure, if you're needing a friend some day  
And are feeling sad and sore,  
To look about you along the way.  
And call at a hardware store.

### TO A HARDWARE CLERK

This poem by Miss Pearl Holloway, although originally published in the Nebraska Iron Monger, the interesting and excellent Nebraska Association's monthly organ, is far too good to be restricted to a single territory. Miss Holloway truly says that "the poem is but a rhymed version of experience," and the author shows that her knowledge and insight into the hardware business is real and true. Surely Miss Holloway should know and sympathize with the hardware trade, for she comes of a good hardware stock, being one of the L. F. Holloway Hardware Co., Fremont, Nebraska.

One day, a stranger in the town and having much to buy,  
I stepped into a hardware store, the first that caught my eye.  
"They must be busy here," I said, "there are no clerks in sight,  
A store the size and style of this will surely be all right.

At last from down the stove lined aisle a young man came my way,  
He reached the counter where I stood, nor had a word to say.  
"Have you a scythe?" I gently asked. He wore a look of woe,  
And, to the last thing on my list, he answered, "I don't know."

With sinking heart I turned away and sought another store,  
A smiling clerk with outstretched hand threw back the swinging door.  
"What can I do for you today?" his eyes were keen and bright,  
And as he hunted up my wants I thought "This is delight."

I gladly purchased many things, yes, more than I had planned,  
For all the future season's needs he seemed to understand.  
Now, friends, the happenings here told are very, very true,  
If I had stepped into your store, which clerk would be like you?

### CUTOUTS TO COAST IN CARLOADS

What is said to be the first carload shipment of cutouts exclusively to be shipped to the automobile trade of the Pacific Coast is reported by the Norman Cowan Co. These enterprising representatives with headquarters at San Francisco recently completed a carload for N. A. Petry Co. cutouts to go to the jobbers in the San Francisco and Sacramento territory. The sum total of the order was approximately \$25,000.

Such an incident as this surely is a double tribute both to the representative and the manufacturer. The Norman Cowan Co., through its genial and energetic director-in-chief, has become one of the leaders among hardware and automobile accessory representatives in the far West.

Coupled with Mr. Cowan's enterprise is the high standard which the N. A. Petry Co., maintains on its accessories, particularly on cutouts. A positive muffler cutout has become an acknowledged automobile necessity. Not only is it possible to gain more power and more efficiency from the fuel, but the Petry cutout is also a detector. The motorist can tell if his motor is in good health and ready for the day's run if the car is equipped with a Petry Cutout. The item is made in all sizes from 3¼ inches down to the special Ford cutout.

# MOSSBERG

## ALL STEEL Wrenches and Tools

### More Sales More Satisfied Customers

How often is it necessary to turn away the prospective purchaser of a wrench because you are unable to supply the particular type of wrench desired?

The progressive dealer overcomes this handicap by stocking the Mossberg line of All Steel Wrenches. Its completeness makes the possibility of a sale greater. Whatever the size of nut—whether square or hex, there is a Mossberg wrench to handle it. No matter how unusual the purpose for which the wrench is needed, there is a Mossberg to meet the demand.

The garage man, the motorist, the expert machinist, the marine engineer, each with his particular needs, can find the right wrenches among your Mossberg stock. And he knows that the Mossberg may be relied upon. He is familiar with its reputation for strength and service.

#### OVERLAND TIRE COMPANY HEAD HAS HAD LONG EXPERIENCE

Among the new tire companies that are attracting unusual attention in the rubber industry is The Overland Tire & Rubber Co., of Omaha. Although this concern has just recently started actual production of tires, the organization back of it is of such widely known standing in the tire business as to immediately place it among the most widely discussed companies of its kind west of Chicago.

The company is headed by Fred C. Rudisell, who is known throughout all of the western territory as a tire salesman extraordinary.

Ten years ago, Rudisell started in the tire business as a salesman for The Gustin Bacon Mfg. Co. of Kansas City, which concern had the Diamond tire distribution for all of the Kansas City territory. From the beginning, his work attracted the attention of the Diamond organization in Akron and it was not long before he was appointed manager for Omaha.

As the Diamond sales rapidly increased in that district, rival concerns began to bid for Rudisell's services and seven years ago he left Diamond to take charge of the Firestone Tire & Rubber Co. business in Omaha as branch manager, with territory embracing Nebraska, Colorado, Wyoming, Southern South Dakota and Western Iowa.

When Rudisell took over Firestone affairs in Omaha, that territory stood 14th in Firestone volume of sales and 9th in cost of operation. Five years later, under Rudisell's supervision, the same territory ranked first in Firestone volume of sales, first in economy and lowest in percentage of operating cost. The business, during his last year with Firestone, amounted to \$2,000,000.

In view of the wide acquaintance Rudisell had established in the western territory and the success he had achieved, he had for some time considered embarking in the tire manufacturing business on a personal basis. The formation of The Overland Tire & Rubber Co. offered him the opportunity he had been waiting for.

As an example of the confidence placed in Rudisell by the trade in general, it is pointed out that several of The Overland Tire & Rubber Company's most important distribution points were contracted for even before an Overland tire had been seen by the distributors.

#### CAMP COOK TABLE FOR THE MOTORIST

The Invention of a Hardware Man

Motorists who tour and camp and have put up with the many annoyances and inconveniences of cooking over an open camp fire will be pleased to learn that Mr. John E. Hardy of the Honeyman Hardware Co., Portland, Oregon, has perfected and placed on the market what is known as the Hardy Combination Running Board Box, Camp Cook and Dining Table.

As a running Board Box it holds a complete cooking outfit as well as a dining service, and can be converted into a camp table in less than two minutes. When a gas stove is used it enables the person cooking the meal to stand in an upright and natural position and when the meal has been prepared, to partake of the same comfortably seated at a dining table as per the illustration. The Hardy Table and gas stove eliminates the camp fire for cooking purposes with all its blinding smoke,

dirt, flying sparks, blackened kettles and the hunting of firewood, and makes camping a real pleasure instead of a drudgery. The box packed for transportation measures 30x10½x10½ inches and when set up as a table has a top 30x26 inches, with two shelves underneath, one of which is of iron. When on the road the iron shelf is used as a top cover for the box to protect it from injury when entering or leaving the car. The box can be carried on the running board or in the tonneau of the car. The Hardy Combination is the most compact, handiest and greatest convenience ever offered the motoring tourist and camper. Mr. Hardy has applied for a patent on the table.

**T**O meet the individual preference of motorists, a dealer must carry in stock a choice of treads. To meet the individual requirements of cars, he must carry these treads in all sizes.

For twenty-seven years G & J have manufactured tires—tires that meet all road conditions—that make friends and add to dealers' profits everywhere.

## The Name Behind The Tire

**G & J TIRE COMPANY**  
1790 BROADWAY NEW YORK

## National Automotive Convention *Westward! Ho!*

**T**HE Pacific Coast seems to call many of the large business as well as political conventions this year, and in line with this "Westward the course of Empire takes its way" movement, the Automotive Equipment Association will hold their annual meeting at the Hotel Del Monte, California, beginning June 10th and "continuing until they are through."

It is particularly appropriate that the Convention should be held in California this year, and it is no disparagement to the other states of the country to say that climatically, in June, California is an ideal place in which to hold a Convention.

From an automotive standpoint it is also particularly appropriate, for California ranks among the highest in proportion to the number of automobiles per capita. From north to south, a distance of almost 800 miles, the state is almost a continuous boulevard, and her roads are the envy of even many of the older and more thickly populated states.

A more proper choice than Del Monte could not be made. Situated 125 miles south of San Francisco on the Bay of Monterey, with every convenience and facility for transacting business, and yet affording sufficient diversion and relaxation from business if that is desired—it seems as though everything conduces to a most interesting and successful gathering.

It is particularly appropriate that the **HARDWARE WORLD** should make announcement of this Convention, in view of the extent to which hardware merchants, both wholesale and retail,

are handling automobile accessories and equipment.

As a matter of fact, it is recognized by every enterprising manufacturer that the hardware merchant is in a particularly fortunate position to handle automotive equipment most successfully. Even the small merchant, who has given no attention to accessories, finds on going over his stock that he is carrying much of the tools and equipment needed by the motorist, and that it really only needs the addition of a few articles such as tires, spark plugs, lenses, lubricants, etc., to make him a full fledged automotive dealer!

It is too often the case that the garages are operated by mechanics rather than merchants. The complaints among motorists have been that the attendants at the garages are not overly anxious to sell merchandise. Perhaps it is due to his early training as a mechanic that he has a natural hesitancy to meet customers in his greasy overalls or jumper.

While we have not received the program of the Convention, yet the matter of the most economical and best methods of distribution is always an important subject in any trade or business convention.

## If You Want the Best

**I**F you want your customers to have the best that the market affords, you will be more than interested in the Auto-Kamp-Kook-Kit.

# KAMP *Auto* KOOK KITS

Two Burner Kit Closed. All  
Equipment Packed Inside

One Burner Kit Open

Four Part Suit Case Outfit

It has so many features which are found in no other stove that it is really in a class by itself. No other camp stove will be so well advertised. Every prominent outdoor publication will carry double spreads, color pages and full page ads throughout the season.

All indications point to an exceptional season. The biggest advertising campaign ever launched for a camp stove is going to bring customers into your store for this better stove. They sell quickly—profits are exceptional. Do not fail to write or wire today for our special proposition.

**Prentiss-Wabers Stove Co.**  
18 Spring Street      Grand Rapids, Wisconsin

**M. H. OLIVER**

Of the Metal Specialties Co. of Chicago, one of Chicago's finest, and we mean this in a most comprehensive way. Mr. Oliver is counting on an enthusiastic meeting at Hotel Del Monte.

**L. A. CAVANAUGH**

Of the Motor Car Supply Co. of Calgary, Canada, who will be one of the Canadian visitors to the Convention. Mr. Cavanaugh typifies the splendid spirit of co-operation and helpfulness.

**C. R. CHURCHILL**

Of the Electric Appliance Co., New Orleans, Louisiana, who will be one of the leaders of the delegation from the Sunny South. Any man from New Orleans can always be counted upon to "know how" at a Convention.

### CHANSOR-LYON RISES FROM FIRE

Although the top factory building of the Chansor-Lyon Company at Los Angeles, California, was visited by a \$30,000 fire last month, the event is but a memory in the history of this progressive western institution. Through the carelessness of a sub-tenant, the plant caught fire and much of the damage was from water. The loss was not slight to say the least. Business, however, was only interrupted for 24 hours, while the damaged stock and the building was being cleaned out and temporarily patched. The entire plant is now in full operation, perhaps even better for its experience. The quick revival is indicative of the energy of this progressive institution.

The Harper Hardware Company at Prosser, Washington, is erecting a new building, and expects to have it ready for occupancy within three or four months.

The Western Lumber Company at Hugoton, Kansas, has purchased the former Hugoton Hardware Company. It will continue as a department of the lumber business.

The Adams County Mercantile Company of Ritzville, Washington, has become so firmly established that it has added housefurnishings to its general line of hardware and farm implements. John Cassady continues as popular manager of the company.

H. H. and W. A. Ragon and W. Hardwick are the new proprietors of the former business of R. S. Davis, at Clarksville, Arkansas. These progressive merchants will continue the institution, at the same time enlarging and extending it.

E. S. Radeker, Marshall-Wells manager at Spokane, Washington, is installed in his remodeled offices at the warehouse there. The offices are now on the main floor. All are remodeled and repainted, and the space upstairs has been converted into a sample room for showing all specialties handled by the firm.

### GET ACQUAINTED WITH BLACK & DECKER COMPRESSORS

Black & Decker "All-Enclosed" Electric Compressors combine compactness, sturdy endurance and convenient availability. Already they appeal to the following market: Blowing out motors and machinery, operating small pneumatic tools, paint spraying, flame work, maintaining pressure in sprinkler systems for fire protection, sand blasting, starting gasoline and oil engines, aerating and pumping volatile liquids, such as gasoline, testing pipe lines and a host of other applications.

The No. 46 and No. 412 Electric Compressors are identical throughout, except that the No. 46—the high pressure machine—has a bore of 2½ inches, and the No. 412—the low pressure machine—has a bore of 3½ inches. This means that the low pressure machine can be changed over to high pressure, or vice versa, at any time by merely changing the cylinder and piston.

The No. 46 is designed especially for pneumatic truck tire work and other purposes requiring a good volume of air at pressures up to 200 pounds with 6 cubic feet of free air per minute capacity. The No. 412 has an unusually wide variety of uses. Its capacity is 12 cubic feet of free air per minute at pressures up to 75 pounds.

It is a heavy duty electric compressor, which one need not fear to run eight or ten hours at a stretch. The entire mechanism can be exposed for inspection or adjustment as conveniently as an automobile motor. This enclosure is accomplished in a similar manner, by means of two longitudinal covers individually removable. No other parts are supported by these covers, and machine can be run for inspection purposes with covers off.

"Completely Enclosed" design has always been a predominating feature of Black & Decker Electric Air Compressors. This affords protection from abuse and damage from outside sources, eliminates the danger of exposed belting or gearing, maintains correct alignment of all moving parts, and forms the basis of the Black & Decker patented air cooling.

**SAVE YOUR FENDERS****Merchant's Anti-Skid  
CHAIN TIGHTENER**

Loose chains slap against fenders, marring and bending them and creating an infernal racket. Merchant's prevent this by gripping the chain at five points, giving an easy tension all around. Saves chains. Saves tires. A wonderful little accessory. Price per pair \$1.00. M. H. Merchant Corp. 236-8 Emma St. Syracuse, N. Y.

# THE ROMORT AIR STATION

**MAKES 'EM STOP AT YOUR STORE**

Acting like a powerful magnet the new Romort air and water station attracts car owners and drivers from miles around. All of which means more sales, more business and more profits in your accessory and supply department.

**NEW METHODS SUPPLANT THE OLD**

The new Romort air and water station does away entirely with the dirty, grimy and usually broken curbstone air hose and the bothersome old water bucket.

**SUPERIORITY OF THE ROMORT**

With the new Romort air and water station, the hinged air pipe automatically returns to a vertical position after using and holds the air hose clear of the ground at all times.

The flexible wire armor on the hinged air pipe and the automatic tire valve prevent kinks, breaks on short bends in the hose, and there are no joints to leak, as there is one continuous hose from the tire valve to the base of the stand.

**IT PAYS TO ADVERTISE**

With its electrically lighted globe, it is on the job 24 hours a day; a constant reminder of your service to the motorist. It is by far the most effective advertising that you can buy.

**H. M. DINE**

Chairman of the Board of Directors and member of the Dine De Wees Co., of Canton, Ohio. Mr. Dine and his associates on the Board will have a good account of their stewardship to present to the Convention.

**ROBERT WEINSTOCK**

Of Winestock-Nichols Co., San Francisco, who, as the California member of the Board, will be in the position of host to the Directors and director to the host at the Convention. Mr. Weinstock has been so busy making ready for his guests that we could not get him to sit for his portrait. This snap-shot was apparently taken in the light of a California sunset, yet it caught Mr. Weinstock in action as he always is. The powerful institution which bears his name is one of the most important agencies for the distribution of automotive equipment in the west. In this it is entirely typical of Mr. Weinstock, and the visiting delegates are going to be just as glad to meet him as he is to receive them.

**EARL REYNOLDS**

Of Reynolds & Reynolds of Tacoma, Washington. Mr. Reynolds represents the North Pacific Coast on the Board of Directors and does it admirably.

## STUDY YOUR STOCK ARRANGEMENT

The moving of a show case and its contents to a new location in the store has meant increased sales to many a merchant. Experience has shown that the turnover in the front of a store is often seven or eight times in a year whereas the turnover in the rear of the same store is only from one to three times a year.

One merchant was about to seek a new location where he could get a room half the size of the one he occupied at a lower rent and was going to reduce his stock because the lines he carried in the rear of his store were moving so slowly. He happened to tell his plan to one of the manufacturer's salesmen who happened in.

### What Lighting Up Did

This salesman asked for permission to help him rearrange his show cases so the light would show up the contents a little better. This was done. The rear of the store at the direction of the salesman was thoroughly washed up and some new lights put in so as to make that section bright even on the cloudiest of days. A special display was arranged in this section and a large sign hung over the main aisle. Immediately the women began to go to the back of the store where many of them had not been for years.

B. C. Watson and C. S. Cox are the new proprietors of the hardware business at Pomona, California, formerly conducted by E. P. Boggess. Mr. Watson comes from Missouri, and Mr. Cox was formerly of Commerce, Oklahoma. Both are experienced hardware men, and have known each other for twenty-five years.

James Trapp will continue the business which has been built up by C. R. Gants, at Malvern, Kansas.

The Christiansen Hardware Co. has been organized at Nampa, Idaho, and is handling a line of shelf hardware and automobile accessories.

The Costa Hardware Company at Anthony, Kansas, is one of the new institutions which typifies the progress and spirit of development in the West.

The Ardmore Lumber & Hardware company, of Denver, Colo., has incorporated with a capital stock of \$250,000. Incorporators are Lee A. Reynolds, Harry S. Preble and Marim D. Scheeler.

The Arizona Hardware & Supply Co. at Phoenix, Arizona, will be finely situated at a very early date, when they move into their \$125,000 three story and basement warehouse now being erected, with 90,000 square feet of floor space available. The building will measure 120x250 feet. It will be modern throughout, the equipment including electric elevators and several carriers.

Brudin & Williams have bought the hardware store of I. B. Gribel, at Hemet, California. The new proprietors are live, wide-awake business men, known all over the Hemet country. Mr. Gibbel will not retire from business, but will devote his personal attention to farm implements, with an office in his new building.

#### SELECT QUARTET FROM THE CHANSLOR-LYON CO. DELEGATION

Among the distributors of automotive equipment in the far western territory, the Chanslor-Lyon Co. is ranked by none. As the delegates move up and down the Pacific Coast, they will find hearty receptions at Spokane, Seattle, Tacoma, Portland, San Francisco, Oakland and Los Angeles. The organization throughout is typical of the spirit of the west in approaching the problems of the automotive industry.

Above are four representative members of the organization who will be among the hosts at Del Monte. From the reader's left to right they are: W. G. Chanslor, President; Frank Enos, Manager at San Francisco; D. F. Hopkins, Manager at Fresno; T. A. Walsh, General Purchasing Agent.

#### NEW ENGLAND MILLS CAPITAL NOW \$150,000

Today the New England Mills Company, 1027-33 W. Van Buren St., Chicago, is one of the country's leading automobile accessory jobbers. The growth of this institution has been wonderful. In almost a breath they jumped from a stock room of 1,100 square feet with \$15,000 capital to 10,000 square feet and a \$35,000 capital to over 20,000 square feet besides large warehouse space and \$150,000 capital.

The reason for the phenomenal growth of this concern is probably superior "Service." Their operating policy is: "Orders in Today and Out Today." It proves a great satisfaction to the dealer, not only to have his goods shipped the day the order is received, but also to have it correctly billed, the same day the order is received, with receipts attached and all the information so that he will know just where to look for his goods and when to expect them. This is "The Little Salesman" way.

They are careful buyers and give the customer standard merchandise,—the kind he has a right to expect, at lowest prices. They keep their warehouse full and this is undoubtedly the secret of the "Service" for which they are famous.

They served over 15,000 dealers last year and are planning to increase this 100 per cent in 1921. The New England Mills Company evidently realizes that this is not always going to be a seller's market, and the amount of "Good Will" and hearty co-operation that they give their customers now will no doubt be the standard the dealer will judge from when dividing his business after things are again normal, and jobbers can be sure it will be in proportion to the "Service" rendered the dealer today.

The Prewitt Hardware Company at Taylor, Texas, has changed its name to the Taylor Hardware Company, but its method of doing business and its prestige among members of the community will continue as previously.

The Western Hardware Company is a new firm at Long Beach, California. The officers are: President, J. H. Lehman, formerly a hardware merchant in Pennsylvania; secretary, J. K. Sowden; treasurer, H. L. Herring.

#### IDEAL TIRE CO. ADDS TO OUTPUT

The Ideal Tire & Rubber Co., of Cleveland, manufacturing Greyhound tires and tubes, announces an increase in their output of 300 tires a day, commencing June 1. This is made possible by an addition to the plant which will be finished by that date. Additional production is necessary according to D. C. Hathaway, General Sales Manager of the company, in view of extensive distribution that has recently been established in the South and West.

Arrangements have just been concluded whereby The National Auto Supply Co., of Oklahoma City, is given distribution for the Oklahoma territory. The states of Louisiana, Mississippi, and the Southern part of Arkansas have been assigned to the Rapides Auto Company, of Alexandria, La. The Tri-States Tire Works, of Chattanooga, Tenn., is made distributor for the states of Tennessee and Alabama. The Texas territory has been divided into two parts and the Behrens Drug Co., of Waco, has the distribution in the Northeast. The Elkins-Boyd Tire Co., of Fort Worth, takes the representation in the Southwest. This territory is in charge of G. E. Buckingham, who is District Manager.

The Three Rivers Company has taken over the stock and fixtures of the Three Forks Hardware Company, at Three Forks, Montana. The new proprietors are: F. A. Jorgenson, W. M. Graybiel, Pierce Elmore, A. J. Hoffer and Joseph Hoffer.

**\$1.00 An Unbreakable Oil Gauge for your Ford**

ALL metal gauge, cannot be broken by a flying stone. Consists of a metal chamber containing a float to which is attached a rod with a white ball which indicates amount of oil in can. Easily installed.

### THREE CHAMPIONS OF THE CHAMPION

Here is a trio of the sparkling Champions of the Champion Spark Plug Co., who will be present at the Convention among the other representatives of manufacturers. One of the most congenial features of the organization of the Automotive Equipment Association consists in this joint membership for manufacturers and jobbers.

The men above are, from left to right: A. D. Hicks, C. D. Clark and George F. French.

### CONDITIONS IN GENERAL

(By H. C. Atkins, President E. C. Atkins & Co., Inc.)

So much is being said about abnormal conditions that one more word seems enough to drive one crazy. Yet sound judgment dictates the wisdom of keeping before you the truth as we see it.

Present conditions as to supply and demand and prices are really normal for busy times. Similar conditions as to supply and demand in 1914 and 1915 would have been welcomed with open arms by everybody. Business in every line at present is good. The demand for goods is insistent. The market resembles the prosperous days of 1906 and 1907 without the danger of a financial panic which followed over-extension of credits at that time. We have now as a safeguard against such a termination of an era of real prosperity the Federal Reserve system.

Concerning present high prices; we have learned to regard that situation as normal for the times. Many chronic diseases are far from fatal. High prices are traceable to legitimate causes and are logical and necessary at the present time. They are no longer speculative but what one might term chronic. The further logic of the situation is that these high prices are going to stay high. The Wall Street Journal says:

"The Industrial Outlook of the current year is encouraging. Nearly all branches of business have well filled order books and are operating at as near capacity as physical conditions will permit. Industry as a whole is in a very strong position to go through a period

of business expansion without seeking financial assistance from the outside."

With the financial situation sound and the demand insistent we should go ahead in a business-like normal state of mind with an abiding faith that the present conditions are sound fundamentally and will not change for the worse to endanger the prudent and careful business man. Carry your usual stock of goods, firm in the belief that there are just as many people living, breathing and carrying on the ordinary pursuits as ever.

### PUBLISH WARNING OF SHORTS

The hardware department of the Merino Lumber Co. at Merin, Colorado, is to be congratulated on the idea of publishing for the benefit of its customers in the community letters from manufacturers and jobbers, explaining why it is that it is so difficult to get certain lines and items in hardware stock at the present time. Thus the consumer is kept informed on the situation and when he sees it is hard for the hardware man to keep his stock up and how he must anticipate his wants long in advance, he, too, will make his purchases long in advance and help the hardware man judge better what his demand will be. In these critical times in trade, frankness and open dealing is just as important as foresight and vision.

The business of the Delta Hardware Co., Delta, Colorado, has so increased that it has been necessary for the company to purchase the Sanders Block in that city. Extensive improvements will be made at the new location this spring.

Captain Kerfoot of the Kerfoot Hardware Co., San Francisco, has purchased the Mountain View Hardware Co. at Mountain View, California. He has also taken a lease of the store adjoining, and will extend his business to include that room also.

#### FOUR OF THE MOUNTAIN MOTOR MEN WHO WILL REPRESENT DENVER AT THE CONVENTION

Denver has become prominent and important in the industry, both as a manufacturing and distributing center for automotive products. Above are four of the leaders who will come out of the mountains to exchange ideas with the rest of the trade. Reading from right to left they are: S. T. McCollum, of the Auto Equipment Co., Denver, and member of the Board of Directors for Colorado; A. B. Mattingly, Specialty Salesman for the Gates Rubber Co.; N. Mattingly, Chief of Sales for the Gates Rubber Co. in the west; H. C. Farran, Gates Sales Chief east of the Missouri River.

#### FOR THE LACK OF PUNCH IN A PINCH

Who cares if he's stalwart and able and fit?  
Who cares if he's clever—a bit of a wit?  
When there's some one on bases we want him to hit.  
That's a cinch.

He may be a jolly companion at lunch,  
Or good at a bargain—but still I've a hunch  
It's back to the minors if he lacks the punch  
In the pinch.

Who cares if he's forty years in the game  
And knows all the ins and outs of the same,  
There are times when the business needs more than a  
name,

That's a cinch.

We want—not a man who can holler and bellow  
And not a mere joker and jolly good fellow—  
When it comes to the pinch.

What odds does it make, that he owns a wad of money?  
What odds that the man's disposition is sunny,  
If he tries now and then to pull off something funny?  
It's a cinch

We want no four-flusher, whose courage is cracked  
And many a guy on the job has been sacked  
'Cause when needed the most we found that he lacked  
The punch in the pinch.

Colver Bros., Holyoke, Colorado, have purchased the Paoli Hardware Store at Paoli, Colorado, and will build an addition at once which will double the size of the store. Furniture will be added to the present stock.

Peter H. Breuss of Pleasanton, California, has added electrical goods to his hardware and plumbing business. A sheet metal shop is also operated by Mr. Breuss, and he is in position to serve his customers in all these lines at his store or at their home.

Bruce Wolfe, 714 Delta Bldg., Los Angeles, who represents a number of Eastern factories on the West Coast territory, has contracted with the Perfection Mfg. Co., Chicago, to represent them on their automobile timers. The trade in California, New Mexico and Arizona will be supplied with timers from stock carried in Los Angeles.

John Dingle, formerly of Coeur d'Alene, Idaho, is the new proprietor of the Prater-Rinehart Hardware Company at Dayton, Washington.

The Western Hardware Company has been incorporated at Los Angeles, California, with a capital stock of \$50,000. The directors are H. L. Herring, J. H. Snowden and J. H. Lehman.

The Hoene Hardware Company of Cottonwood, Idaho, has purchased the Idaho Outfitting Company at Winona, Washington. The store will be enlarged and remodeled and will carry a complete stock of hardware.

John W. Miller and Ray F. Miller have purchased the stock of the Coquille Hardware Company, at Coquille, Oregon. The new managers are well known local men and the business will be conducted just as before.

F. W. Whitmore & Company have combined the stocks of the Barroll Hardware Company and the Codd Furniture Company at Colfax, Washington. Through the consolidated stock they will be able to offer a complete and up-to-date line of Hardware, Crockery and Furniture.

On moving into their new building, the McHan Hardware Company at Fairfield, Idaho, are being congratulated on having one of the most worthy and up-to-date institutions in Idaho. Hardware, plumbing and gas engines and furniture are handled in the different departments of the business and with the additional space the business will grow extensively.

## Weber Crank-Pin Re-Turning Tool

**NO FILING NO OFFSETTING NO JIGS**

This Weber Tool turns all pins absolutely round from one setting of Crank Shaft, on centers. A micrometer dial enables the operator to gauge his cuts and turn all pins to uniform size. The average time required for truing up one pin is from 5 to 10 minutes. The 4 pins can easily be finished in 30 minutes, and the entire shaft is completed with only one setting.

The Weber Tool is guaranteed to turn crank-pins within as close limits of accuracy as any other known method. It will soon save its cost in any Tractor or Automobile Repair Shop. An assortment of cutting tools are furnished. These will fit the pins of most of the popular automobiles, trucks and tractors.

Jobbers and dealers will find this a good article to sell. Write for prices, terms, etc.

**A SIZE FOR EVERY CAR**

### FIRST WINCHESTER STORE DESCRIBED

The trade cannot fail from being interested in the opening of the first of a great number of Winchester stores that are to blossom in all parts of the United States, in Providence, R. I.

Members of the various gun, rifle, bait and fly casting clubs, the Rhode Island Fish and Game Protective Association, social, political and business organizations were invited to attend the formal evening opening and some four thousand persons passed through the doors on a tour of inspection during the two hours the doors were open.

The store was opened to the general public on the following day and for seven hours more than 500 persons an hour paid tribute to the progressiveness of the Winchester Repeating Arms Company. With the first store open and going on in a smooth manner, the other Winchester stores will be opened in rapid succession.

President John E. Otterson of the Winchester Repeating Arms Company, with Vice-Presidents Henry Brewer, Frank G. Drew and J. L. Ackerson, attended the opening on the 22nd, and a great many other officials of the Winchester Company. The people came and appreciated the wonderful store. Everyone who entered came because he or she wanted to see what it looked like and nearly 2000 women scrutinized all parts of the store on the opening days. You will realize that the women as well as the men are interested in what the Winchester Company has to sell.

Long study and preparation had been made by the company and several innovations made. You will rarely find a woman clerk in a hardware or sporting goods store, yet in this store there are three women clerks, for it is the intention of the Winchester Repeating Arms Company to cater to the women as well as the men. With this idea predominant, a ladies rest room is to be found on the balcony. The rest room is beautifully finished in wicker with a settee and comfortable chairs and the latest magazines.

Winchester fronts will be the same whether the store is in Providence, Boston or Kalamazoo, and the front cannot help but attract attention. The front is of gray with the name "Winchester" set out in vivid red. The color scheme is carried out in the windows. Guns and ammunition were shown in the right window; there being everything in the window that might interest a huntsman or trapshooter. Garden and lawn equipment was shown in the left window in a most

simple manner. In a small side window baseball and tennis goods were displayed.

#### Studied Store Arrangement

Careful study has been given by experts in the interior as well as the exterior. The fixtures were designed and arranged by experts and the merchandise so displayed that everything was within reach. There are no ladders of any kind in the store, and there will be none in any of the Winchester stores. There will be no protruding objects to mar the beauty of the interior. Every article sampled bore a tag on which was a description of the article and the price in plain figures. Special fixtures have been constructed for particular kinds of merchandise, so that they may be inspected advantageously. Every department in the Providence store is so located that after one once visits a department he or she will always know where to find it, for there will be no changing. This will be carried through in all Winchester stores.

The Winchester name has been built on quality, and everything sold in the Winchester store will be of the same grade as the Winchester Rifle, Guns and Ammunition. No one ever questioned the quality of Winchester guns or ammunition and the Winchester Company

A reception and reading room on the balcony is one of the features.

## Here is a simple plan that can make your store razor headquarters

*Practical suggestions that dealers are using to speed up sales and get quicker turnover*

*AutoStrop Razors sell themselves when the salesman knows how to demonstrate them. Show the customer how a touch of the thumb adjusts the blade for a close or medium shave, how the blade can be wiped dry without removing it from the frame. A demonstration goes a long way towards clinching the sale.*

**M**EN like to trade where they can get dependable advice on their purchases. They buy where they have confidence in the judgment of the proprietor and his clerks.

Just to offer several brands and ask a man to take his choice, is not the way to sell him. Men want help—service—and the store that makes selection easiest is the store that they will come back to.

### *Examples of dealer service*

Dealers everywhere are trying to find new ways to give better service, because they realize that a new day in retailing has arrived—that only by a superior type of merchandising can a store meet today's competition.

A dealer in Iowa has averaged more than \$3,000 a year for the last two years—selling AutoStrop Razors, because he gave his customers an opportunity to demonstrate the AutoStrop Razor for themselves.

A dealer in New Jersey has made his store known for miles around as "Razor Headquarters." His plan is a simple one—offering an AutoStrop Razor free to anyone who can make the razor cut or injure the strop while restoring the edge.

A dealer in Pennsylvania is speeding up sales by displaying together articles *that are used together*. With his monthly window-trim of AutoStrop Razors he always displays shaving brushes, soap, mugs, strop-dressings, blades, even talcum and shaving lotions.

*One of the best methods of selling the AutoStrop Razor is to get the customer himself to strop the razor on its own specially prepared strop. Show him how the stropping is done without removing the blade*

These are practical business-building ideas that have proved their worth with other dealers. They will help a lot toward making your store stand out in the community—toward giving it a personality that will attract customers and hold them.

### ***Take advantage of this big razor-selling season***

This time of the year is second only to the Christmas season with many dealers. Thousands of gift sets are sold for vacation trips and as school graduation presents.

Men everywhere will soon be outfitting themselves for mountain, lake and seaside resorts. This is a sales opportunity that no live dealer can afford to miss.

Make a special drive on safety razors. When the vacationist is in your store to buy articles for his vacation kit demonstrate the AutoStrop Razor, show him how it sharpens itself without removing the blade and explain to him that 500 shaves are guaranteed from every dozen blades.

These same sales-appeals are extremely effective in selling gift sets for graduation and commencement presents.

This season offers a double opportunity for the dealer—vacationists and graduates—each a logical prospect for an AutoStrop Razor.

Build appropriate window-displays to reach these classes of buyers. See for yourself how to build up razor sales at this time.

**Dealers**—Write for information about our free merchandising service and special selling assistance. We can help you in many ways to speed up your sales of AutoStrop Razors.

**AUTOSTROP SAFETY RAZOR CO.**  
New York      Toronto      Paris

## **Auto-Strop Razor** *—sharpens itself*

**320 newspapers are carrying the story of the AutoStrop Razor to every locality in the United States**

Special advertising, the most effective we have ever run, will reach a total of 25,000,000 live up-to-the-minute newspaper readers. The selling appeal in these advertisements has been tested and proved. In 1919 this same kind of advertising *trebled* the business.

**A magazine audience of another 20,000,000**

44 big advertisements, some of them two-page ads, every one tested, are running in such big national magazines, as Literary Digest, Collier's, American Magazine, The Red Book, Life, Cosmopolitan, and the American Legion Weekly—all men's magazines of big pulling power.

There never was an AutoStrop campaign so comprehensive as this. We are pushing right ahead—will you be with us?

With the aisles flanked by both counters and cases, with light in abundance and order everywhere—all this gives the Winchester stores the appearance of a fine jewelry or department store.

doesn't want anyone to question the other line of goods they are now making and selling. It is not the intention of the Winchester Company to cut prices—they intend to sell goods at a fair margin of profit.

#### Lights and Displays Everywhere

The Providence store is very light. The side walls and ceiling are painted ivory white with 16 large indirect lights. All show cases are lighted and lights are also in the panels on the wall fixtures. The woodwork is of dark mission oak. All goods are sampled on boards covered with green felt. On the right behind sliding glass doors are shown rifles and trapguns, fishing, tennis, baseball and other athletic equipment. The Crawford McGregor line of golf clubs and the Draper-Maynard line of athletic goods are being sold and will be sold in all Winchester stores. Bancroft, Lee and Slazenger tennis racquets are also being carried. Everything from sneakers to snow shoes will be sold, and the carpenter, the plumber, the athlete, and the housewife will be all taken care of.

On the left side of the store one found saws, tools, hardware and locks, while beneath the ledge was shown small merchandise. When these were in a drawer the front was of glass and if on a shelf a glass door lifted to give access. Therefore no merchandise is concealed. The counters are in the center of the store, the wonderful show cases forming a perfect horseshoe. With this arrangement, there are wide aisles between the cases and the side walls. In the show cases were shown smoking sets, revolvers, flashlights, shaving accessories, Sterno alcohol stoves, clocks, cutlery, pocket knives, ivory pyralin, thermometers, silverware, vacuum goods, electrical appliances, etc. The goods to appeal to the woman are on the left side of the store and the articles to appeal to the men on the right.

#### Men's and Women's Departments

Automobile accessories, bathroom fixtures, paints, oils, etc., were shown in the back of the store, directly behind the sporting goods section. In the basement bulky household merchandise and utensils were displayed. Here there are open shelves and counters where everyone can pick up the goods they wish to inspect. Practically all of the heavy hardware is in the basement store.

On the wall cabinets on the main floor is used the latest and best method of pricing and stocking of merchandise. The stock is in numbered drawers behind the sample doors. These drawers are divided into sections. The first section is No. 1. The second is 1-1. The third is 1-2, and so on down the line. This number is shown on the sample panel so that the salesperson

can find the goods quickly. The stock is behind the opposite panel from which it is shown. This makes it possible to secure the article without taking the sample away from the sight of the customer. This idea is followed through the store and it will be the same in every store.

#### A JACK FOR EVERY CAR

"A size for every car" is the motto of the Republic Auto Parts Co., at Long Island City, New York, in announcing their Sterling Jacks to the trade. It is also claimed by the company that "Sterling Jacks never fail," representing as they do the highest development of sturdy construction. The operating mechanism of the Sterling Jack is the very best grade of carbon steel, all parts are carefully machined, fitted and subjected to rigid inspection.

In fact, the company guarantees that Sterling jacks are absolutely sure to give unqualified satisfaction to the user, and any jack or part found defective in material or workmanship or unsatisfactory in service will be replaced when returned, charges prepaid, to the factory for inspection.

Finger loops are provided for every jack weighing over six pounds. The jacks are made in sizes which vary in weight from five and a half pounds to twenty-eight pounds to raise weights varying from 1500 pounds per wheel up to 5 tons per wheel.

San Pedro Hardware Company, at San Pedro, California, has passed from the hands of Peter Lux to John A. Elliott, Jeff Evans and Walter L. Davenport. All the new proprietors are well known in their community.

## GENERAL OIL UTILITY OIL

### SELL IT TO EVERYBODY

**S**UPPOSE you sold every customer entering your store a can of Winchester General Utility Oil. Think what your turn-over would amount to on this item each month—what a profit-maker it would be for you.

You can almost do this very thing.

For **everybody** is a prospective buyer of Winchester General Utility Oil. Everybody has use for it every day in a dozen or more ways. In the home, the factory, the office, or on the farm. Many, many times they find something working stiffly, squeaking, rusting or needing cleaning and polishing, and would use a little Oil—if it were handy.

#### TOO MANY USES TO ENUMERATE

Nobody can enumerate all the uses for Winchester General Utility Oil. Everybody can make use of it every day.

It takes friction out of everything that requires a light lubricant.

It "eases up" anything that rubs another surface, such as scissor or shear blades, door latches, etc.

And, as its name implies, Winchester General Utility Oil has more uses than just to lubricate.

## LUBRICATES—CLEANS— POLISHES—PREVENTS RUST

**D**ENTISTS and Barbers use it on their instruments for the whole four purposes—to make them run quickly and smoothly, to keep them clean and shiny, and to prevent rust.

Why not do a big volume of business on this lightweight oil? It is easy to handle, easy to sell—already put up for you, in 1 oz. bottles and 3 oz. cans—and can be made to pay you steady profits.

Try suggesting to every customer, after making any purchase, a handy can of Winchester General Utility Oil.

Try this a few times—you'll be surprised how easily it sells.

THE SEA COAST NEAR DEL MONTE

No part of the California sea coast is more attractive than that about Monterey Bay, near the Hotel Del Monte, where every facility is provided for the comfort and complete enjoyment of guests.

### ABLE COMBINATION AUTO LOCK

Lucky is he who owns an automobile, but twice lucky is he who keeps his machine these days. In order to meet the demand for a method of

locking automobiles, the Able Chain Tire Lock, illustrated herewith, has been found to meet all the requirements of the automobile owner.

As a trade proposition, accessory dealers and distributors find this combination lock outfit most attractive. They are made of new process steel links and bars and with a bronze combination. They are simple to install, easy to operate and in the terms of the manufacturers, "Safe as a Safe." No two locks have the same combination.

In his report, the Engineer of the Casualty Department for the Insurance Underwriters, said: "The steel loops resisted all attempts to cut it with bolt cutters. It was impossible to start hack-saw blade in the material or to mark it with a file. No success was had in the attempts to break the lock or loop with a 2 lb. machinist's hammer." Also that "it was easily installed, and easily locked and unlocked." In conclusion, he said: "It will be noted that this device is practical to install and use; that it is durable, and that it is uniformly manufactured."

Able locks are handled exclusively through distributors and jobbers. Further information may be obtained from the Able Mfg. Company, 731-733 Folsom Street, San Francisco, California, where the company's own factories are engaged in manufacturing these locks.

Jerry N. Taylor is a new member of the hardware trade of Carthage, Missouri, and is building up at the same time a good stock and local good will.

McMillan & Hills are proud of their new store building at Linneus, Missouri, for they have facilities to better display their stock and receive their many customers.

### STANLEY COMPANIES UNITE IN COMMON INTEREST

With the purchase of the going manufacturing business of The Stanley Rule & Level Company, the Stanley Works will own and operate some twelve different plants and properties, located where for years the workmen have grown up and become accustomed to the exact requirements needed in the production of the particular articles that are manufactured in these factories.

In connection with these are operated open hearth steel works, hot and cold rolling mills, foundries, timber lands and saw mills for furnishing much of the raw material used. There are also engineering and machine shops for the design and construction of its own special machinery, and hydraulic plants for furnishing electric power.

The principal factories for the production of the finished product, and the main offices of the company, are in New Britain, Conn., but there are other factories located at Niles, Ohio; Newark, New Jersey; Bridgewater, Mass.; South Shaftesbury, Vermont; Bridgeport, Conn.; Plantsville, Conn.; in Canada, at Hamilton, Ontario, Roxton Pond, Quebec, and at Kobe, Japan.

The Stanley Works was founded in 1843 by F. T. Stanley and incorporated as a joint stock company under the present corporate name, in 1852. The Stanley Rule & Level Company was incorporated under that name in 1858, being a combination of the firms Hall & Knapp and of A. Stanley & Co., which had been incorporated some years previous.

The present consolidation unites the manufacturing interests of the two Stanley Companies that have grown side by side for almost seventy years, each developing its separate line of products for the hardware trade. During that period, there have been many common interests. During the earlier years, the same salesmen frequently represented both companies, and in some foreign fields such arrangements still exist.

The two businesses will be carried on under separate names as heretofore, and it is the present plan to merge, or consolidate, only those activities in making or selling the product, which, beyond any doubt, can be strengthened and improved by so doing. There are many points of contact where the forces of both companies will be mutually helpful, which will eventually result in better service to the trade.

### B-N TOURIST'S HAND AXE

The Burgess-Norton Mfg. Co. of Geneva, Illinois, manufacturers of Bur-Nor hardware specialties and "B-N" automobile accessories, are placing on the market a new "Tourists and Campers"

Hand Axe, known as the No. 110 Special special.

Like all other Bur-Nor Hatchets which have been made for fifteen years, this small hand axe is constructed with a hollow steel reinforced handle that is guaranteed not to break, and an oil tempered blade which will positively keep its edge. It is an article which will appeal during the coming year to automobilists to a very large extent. It can be thrown into the tool box, under the back seat or fastened onto the belt.

It has been widely advertised during the spring months in trade papers, and at its price it is certain of a large sale. Samples will be submitted to jobbers upon request. The list price is \$1.90 with sheath, and it is sold to the retail trade at \$12.00 per dozen.

## NEW HOME FOR OAKLAND JOBBERS

The Western Heavy Hardware & Iron Co. started business at Oakland, California, in March, 1907—dealing in iron, steel, wagon and blacksmith supplies. With the passing of the horse drawn vehicles to the automobiles, it was seen by C. A. Nesbitt, manager, that the business would have to be converted to the automobile and shop supply business.

In the new line the company has out-grown the old location and is moving into a new home especially built to accommodate a jobbing business, the only one of its kind in Oakland. The building is 75x100 feet, with spur track facilities and all conveniences for the employees. They intend to give better service to their customers and a welcome is extended to all.

R. H. Hall is the proprietor of a new hardware business at Brush, Colorado.

## Farmers and Owners of Cars are Prospects

**Y**OU who have in the past handled vehicles and wagons and have lost that profitable trade to the Motor Vehicle, are in a position to get the old volume and more back in handling "Utility Trailers" and without the necessity of giving service or having an expensive service department as is required where you sell motorized vehicles.

Every farmer in your community is a prospect for a Utility Trailer of some sort. Every motor truck running over your highways is necessarily a prospect for a Utility Trailer, if he is to compete with others using them, they bring truck operating cost down to a point where the profits are satisfactory, and truck operating brought out of the Red Ink.

Utility Trailers are motorless auxiliaries to the truck or passenger automobile, bringing you a clean profit when sold and a profit that is yours, not to be later paid out in shop costs of free service as in motorized vehicles.

We have some good territory open, write us for our proposition to dealers.

1328 Palmetto St., Los Angeles, Cal.

## W. D. COLLINS FINDS TRAVEL IN AUSTRALIA HARD

Certainly W. D. Collins could write an enlightening volume on the difficulties of travel and general business handicaps to be encountered by the American traveler or merchant in Australia.

For thirteen years Mr. Collins has been covering the western half of the world, which includes perhaps the eastern half also, for S. L. Allen & Co. of Philadelphia. He has made many trips to Australia, but on his return from his last trip he is impressed with the fact that never before has he encountered such obstacles or difficulties as between November, 1919, and April of this year, when he returned. Lack of ships, labor difficulties, a prolonged drought and after-the-war reconstruction measures combine to bring about the Australian problem.

Mr. Collins has arranged to take his wife with him, but he found it would be impossible to get accommodations for her, even between the United States and Australia, much less hotel accommodations about the Island Continent. It was necessary at all times to telegraph ahead for reservations in the hotels and to book passage on steamers between ports for months in advance.

The American red tape and governmental requirements are nothing compared to those of Australia, says Mr. Collins. As a matter of fact, he had to pay income tax on his salary based on the time he was in Australia, and holds receipts for this amount from the Internal Revenue department of the Commonwealth. Passports and clearance papers are necessary for movement all about the Island, and the authorities are very strict on account of their fear of an epidemic of influenza.

The same difficulties encountered in travel are, of course, to be faced in shipping goods and taking orders. Altogether Mr. Collins found his trip very difficult, but reports that business is good, and the demand for Planet Jr. tools and the other items in the line of S. L. Allen & Co. is always increasing and always will. The very fact that the Australian buyers are anxious to import Allen goods, even in the face of these difficulties, is proof enough of the satisfaction Mr. Collins brings by placing the Philadelphia made tools and implements in the Commonwealth.

Mr. Collins will spend the next few months in calling on the trade on the Pacific Coast and the inter-mountain region and plans his annual trip back to Philadelphia in July. He also represented his company at the foreign trade convention, which met in San Francisco recently.

The Fritsch Hardware Store at Sedro-Woolley, Washington, is giving way to the pressure of necessity and extending its balcony over the entire main floor to give more floor space.

Barlow & Dewees are the successors to H. T. Warnstaff in the hardware business at South Haven, Kansas. They will carry a general line of hardware, sporting goods and farm implements.

The Charles Ford Company, of Watsonville, California, has purchased the hardware stock of Charles Leu. It will be combined with the Ford Company's already extensive complete stock.

The Frank Hardware Company has been incorporated at Wheatley, Arkansas, and will handle a full line of hardware, sporting goods and farm implements. The proprietors are Alexander Ochleschlager, Samuel G. Scott, Henry M. Frand and E. R. Moss.

It might seem that entering business under the title of Greene Bros. might be a liability, but the firm of that name at Rutland, North Dakota, do not find it so. In fact, things are booming with them since they purchased the stock of the Rutland Hardware Company at that locality.

Anniversary sales are usually characteristic of department stores, but it was for the Le Clerc Hardware Store of Hoquiam, Washington, to celebrate the fifth anniversary last month with a great anniversary sale. Under the present ownership the store has constantly grown and improved until it is now recognized as one of the largest and liveliest hardware stores in Southwestern Washington.

## POSSIBILITIES IN PUSHING ROPE THROUGH DISPLAYS

"You can sell rope all the year around and you don't have to be on the sea coast to do it," say Pettit & Morrison, merchants at Grundy Center, Iowa. Just to back up what they say, they took a picture of their recent display of rope and cordage, and when the western merchant looks on the display as it is here reproduced, he will see somewhat of the secret of the success of Pettit & Morrison in the rope and cordage business. It is not only the house mover, the hangman and the sea captain who are using rope.

Construction work is going on all over the country these days. The painter is buying rope. The farmer is always looking for rope. Merchants will be surprised how many small orders for rope will grow into big orders if the rope is only put before the public in an attractive way. It may also be part of the secret of Pettit & Morrison's success that they concentrate on Columbian Cordage.

Columbian Rope Display of Pettit & Morrison, Grundy Center, Iowa

Every Foot of  
**COLUMBIAN MANILA ROPE**

can now be easily and positively identified on the dealer's floor or in actual use by anyone. This Rope, if a few inches are untwisted, will show imbedded in the heart of a strand a small twisted tape. Pulling this tape out and unwinding it brings to view the colors (red, white and blue) and the signature of the Columbian Rope Company.

Think what this means; you have the tangible evidence in every foot of Columbian Manila Rope that it is made by this Company and, therefore, is guaranteed to be not only pure Manila, but equal and in most cases superior to ANY Rope made.

Mr. Dealer, teach your Rope customers to look for the red, white and blue marker; it means repeated orders for you.

## WINCHESTER DEALERS MEET IN NEW HAVEN, JUNE 28-JULY 1

As a part of the development of the Winchester plan, there will be held at the main plant of the company in New Haven, Conn., June 28, 29, 30, July 1, a gathering of dealers from all parts of the country that promises to be a great event in the history of hardware merchandising.

The Winchester Company is inviting every one of the thousands of retail hardware men who have accepted the opportunity of cooperating in the Winchester plan to go to New Haven for the largest convention of hardware men that has ever been held in the United States, which will also be the First National Convention of Winchester Agents.

The convention is planned to give every Winchester dealer an opportunity to inspect the vast plant of the company, to see its manufacturing resources, to see how the goods which they are to handle are made, to learn the details of them and the reasons for the quality and service upon which they are fundamentally based and the reasons that warrant them in their confidence and enthusiastic support of these goods.

Agents have been established in every section of the country and they will be present from the farthest points of the Pacific coast, north and south. Just how many will be in attendance cannot, of course, be even approximately estimated at this time, but the company expects 2000 at least.

The Tolt Hardware business at Carnation, Wash., has been purchased by A. Reder and Joseph Van Horn, two young business men of Seattle, who will henceforth conduct the business.

The Ennis & Harris Mercantile Stores has been incorporated at Rifle, Colorado. This is a combination of the former Ennis & Harris Hardware Co. with a grocery and market in the town, and the combination will allow for extensive improvements and extensions of each business.

Grover Crosswhite has joined with his brother, C. E. Crosswhite, in the business of the Castle Rock Hardware Co., Castlerock, Colorado. This progressive firm caters to the needs of the agriculturalists of their vicinity, carrying a complete line of implements and hardware at all times.

Cooperating with the local Rod and Gun Club of Hoquiam, Washington, in a drive for new members, the LeClerc Hardware Company at Aberdeen, Washington, has offered a handsome fishing prize to the solicitor securing the most members for the club. It is in co-operation and interest of this sort that dealers will bring the trade to their counters.

A new era in the life of the Christenson Brothers' Hardware Co., at Nampa, Idaho, started with their moving into their new brick building. The firm has been engaged in business for a number of years at Kuna, Idaho. The new building measures about 60x90 feet and cost about \$25,000. A \$75,000 stock will be carried, and it promises to be one of the largest hardware firms in southern Idaho.

## NEW SIMPLEX ELECTRIC RANGES

A few years ago it was thought that the electric cook stove was an appliance for the plutocrat, or for only the very rich. Several factors have since combined to make the electric range within the reach of the average consumer and highly practical from all points of view. Gas, coal and wood fuel have all risen in price since the war, because of their growing scarcity, and the high prices which it is necessary to pay to labor in their production.

Electric power is constantly conquering the country, and its costs have not risen in any way proportionately with those of other fuels. A factor in the coming of the electric range has been the enterprise of the manufacturers in simplifying and perfecting the range itself. The two new models of the Simplex Electric Heating Co. of Cambridge, Mass., pictured herewith are typical of the electric range of today.

No. 25 Simplex

No. 29 Simplex

For the past year Simplex model No. 27 has been one of the best selling electric ranges manufactured. These two new models, No. 25 and No. 29, are similar in construction to No. 27, one being a four plate range, with elevated oven, roaster and warming compartments. No. 25 is the smaller range with oven and three plates.

Among the principal exclusive features of the Simplex Ranges is the enclosed unit which obtains an intense red heat so conducive to quick results. The vertical switch panels, shown beside the oven of each range, are a feature which adds to the appearance. These ranges are white enameled, always clean and easily distinguished.

Thomas E. Waters has purchased the stock of W. J. Deering & Son at Atlantic, Iowa.

Budin, Williams & Company is the name of the firm which will succeed the Gibbel Hardware Company at Hemet, California.

One of the progressive merchants who took an active interest in the recent convention at Long Beach, was Homer F. Larkin, of the firm of McClellan & Larkin at Covina, California.

## The Efficiency Cotter

This Is an Age of Specialists

When sick, you consult that physician with special training on your particular ailment. He is a specialist.

When you want a man to handle a new line, you choose carefully, and select one with more than ordinary knowledge of the merchandise. He is a specialist.

When your Flivver refuses to go another foot you call up one of Mr. Ford's assistants. Another specialist.

# Electrical Appliances An Unlimited Field for the Merchant

**T**HERE are about twenty-two million homes in the United States. About seven million of these are wired for electric service, and hundreds of thousands more are being wired each year. But let us consider the seven million already wired for electric service.

In every one of these seven million homes there's need, right now, of electrically operated appliances that at retail would represent an investment of from one hundred to one thousand dollars.

## A Long and Useful List

The electric clothes washer, the electric ironer, the electric dishwasher, the electric cleaner, refrigerator, range, and a long list of personal appliances, such as the electric vibrator, sewing machine and small power motors, curling irons, heating pads, grills, toasters, percolators and other devices will easily total more than one thousand dollars' worth of electrical essentials for efficiency in the home.

Here is an immediate field for electric appliances for the home running into seven billion dollars! Will the merchant grasp his opportunity?

And as fast as the electrical industries' great enthusiastic manufactures organizations and associations, keep hammering with educational publicity directed at the woman in the home, these appliances will be accepted, because it will be learned that they cannot afford to be without them.

If the field for these appliances were restricted to those who, from the superficial standpoint, "could afford them," then there would be less reason for enthusiasm. But actual experience in selling such products clearly demonstrates that it is in the home of moderate means, where there are no maids to help with work, and where the mother is brought directly in contact with daily drudgery that electrical helps are most in demand.

## Every Wired Home a Prospect

We can, therefore, rest assured from actual experience, that every home wired for electricity is a real prospect for the sale of all such electrical appliances just as quickly as they can be made and brought to the home owners' attention in the right way.

This tremendous home-field for the sale of electrical appliances has been almost wholly neglected until now, due to the pressing needs of electrical devices for industrial purposes. These needs have occupied the time and attention of engineers and manufacturers to almost the complete exclusion of the home. Outside of electricity for lighting, practically

nothing has been done to supply the home with the labor and money-saving electrical devices which have made American business houses the most efficient in the world.

Now the home is coming into its own, and the electrical industry is beginning to give it the attention that its tremendousness deserves. As a result, we stand today at the beginning of an electrical household appliance industry so vast in extent, and so unlimited in future growth that even the most far-seeing mind cannot fully grasp its magnitude.

Are you preparing to get your share?

Neither the merchant who nags his clerks, nor the clerk who nags his customers will ever be successful in getting along with the parties nagged.

## A POWDER POEM

A woman is queer, there's no doubt about that.

She hates to be thin and she hates to be fat.  
One minute it's laughter, the next it's a cry.  
You can't understand her, however you try.  
But there's one thing about her which everyone knows—

A woman's not dressed till she powders her nose.

You never can tell what a woman will say,  
She's a law to herself every hour of the day.  
It keeps a man guessing to know what to do—  
And mostly he's wrong when his guessing is through;  
But this you can bet on, wherever she goes  
She'll find some occasion to powder her nose.

I've studied the sex for a number of years,  
I've watched her in laughter and seen her in tears;  
On her ways and her whims I have pondered a lot,  
To find what will please her and just what will not;  
But all that I've learned from the start to the close.  
Is\*that sooner or later she'll powder her nose.

At church or a ball game, a dance or a show,  
There's one thing about her I know that I know—  
At weddings or funerals, dinner of taste,  
You can bet that her hand will dive into her waist,  
And every few minutes she'll strike up a pose,  
And the whole world must wait till she powders her nose.

—Edward A. Guest.

## WHITLOCK'S GREAT WAR ORDER

The Whitlock Cordage Company claims one of the largest war orders of the Navy Department. A single contract was placed for more than 1,400,000 pounds of Whitlock Cordage, ranging in size from 1/4-inch diameter ("6thd.") to 10-inch circumference hawsers. The navy inspectors' guarantee and the usual tests the rope was put to in the service, is an effective recognition of Whitlock Cordage quality.

This order went to the navy yard at Portsmouth, Virginia, and supplemented the supply which the navy's own rope factory was able to turn out. It is claimed by the Whitlock Cordage Company that all shipments of the Whitlock Cordage were passed by Navy Inspectors and not a single coil was rejected or even unfavorably criticised, and that their unusually high strength guarantees were exceeded on the average by more than 20 per cent.

Now that the war is over, the entire output of the Whitlock plant is available to the trade under the company's slogan "Either you are satisfied or we are not," the merchants of rope know that what was good enough for the government is good enough for their customers.

### Have You a "Rope Schedule"?

Merchants who sell rope, and this includes every progressive merchant, can ill afford to be without such a rope schedule as is published by the Whitlock Cordage Company, and the company will supply it to any merchant or dealer upon request. This includes tables on the weight and strength of every diameter of rope manufactured by the company, and the price per hundred feet.

The company has bound these Rope Schedules with cardboard cover, varnished for protection against soiling. Merchants who have not received a copy of the schedule, may receive one by applying to the office of the Whitlock Cordage Company, 46 South Street, New York City, N. Y.

The Stadelman-Bonn Hardware Store at The Dalles, Oregon, suffered from fire recently. It is estimated that the damage to the stock will amount to about \$10,000.

Gregg W. Summers has taken over the stock of John Luttge at Burbank, California, and will add a full line of hardware to the stock. H. A. Moore will have charge of the new hardware department.

The Oliver Rickard Hardware Co., Centralia, Wash., has recently been reorganized by the entrance of L. G. and H. G. Goranson into the firm. C. L. Rickard is the president and Wm. H. Oliver is secretary and treasurer.

In spite of the high cost of building materials and the uncertainties of a presidential year, the Avis Hardware Company at Pomona, California, is being extensively remodeled. The change for the better is certainly indicative of the condition of the business and the spirit of progress which animates it. A new front will be put on the building, giving a fine deep entrance with display windows on each side.

In order to see for himself where the goods he sells are manufactured and why it is that he cannot get them as fast and as fully as he used to, E. E. Johnson, manager of the Stephens Hardware Company at Monroe, Washington, left with his wife last month for an extended visit to New Haven, Connecticut, Montreal, and other eastern cities. The trip will occupy them several months and will combine both business and pleasure.

## YOU CAN ALWAYS TELL COLUMBIAN ROPE

For many manufacturers it is easy to place a trade mark on their products conspicuously so that as the article is used or as it is issued it is always identified with its manufacturer. Steel is stamped with a die, articles of clothing are definitely marked by their makers, and oranges are wrapped in tissue paper which identifies the grower or the brand. The paper manufacturer puts his water mark right into the paper so his goods can never be mistaken.

Along other lines it is more difficult to identify the product with the manufacturer and with the trade mark, and cordage is one of the products which is most difficult to trade mark or identify. It is for this reason that the Columbian Rope Company's new sample which has just gone to the trade, is particularly interesting and clever.

This three foot sample of pure Columbian Manila rope tells the entire story more really and more graphically than pages and pages of catalog or descriptive matter would. One half of the sample is finished rope such as would be used with the ordinary block and tackle. About the middle it is tied, and the other half shows the makeup of the rope. One strand is just the way it comes from the machine, another strand is combed out to show how much fibre each strand contains. The third strand shows the way the marker is inserted in the rope.

A paper tape with the company's red, white and blue band is woven right into each strand, as proof positive that the rope is of Columbian manufacture and carries the Columbian guarantee that it will satisfactorily perform the service for which rope is intended.

Certainly there is no other cordage guarantee stronger than this, and there could be no better way of identifying the product with the guarantor and what is behind it. No matter how the rope may be worn, or how far it may be carried from its home in the cordage city of Auburn, New York, its mark is impressed in each of the three strands, woven into the very fibre and fabric of the rope itself.

### "THEY DON'T SCRATCH, THEY CUT"

The Caldwell Sales Company, San Francisco, Western distributors and factory representatives for the Diamond Saw & Stamping Works, manufacturers of Sterling Hack Saw Blades and Power Saws, have adopted the above caption as their slogan in behalf of Sterling Blades.

Their able field representative, Walter D. Osborn, is now in the Northwest, where his industry, coupled with Sterling quality, are producing most satisfactory results. Wherever Mr. Osborn's presence and efforts are extended, customers invariably hit the Sterling trail.

Mr. Caldwell invites buyer's correspondence on Sterling Blades as well as their other lines mentioned elsewhere in our pages.

## ATTRACTIVE ALUMINUM WARE CATALOG

F. R. Murray Co., Ltd., 365 Water Street, Vancouver, B. C., who are wholesale distributors of hardware specialties, have just mailed to the trade their attractive catalog, featuring their aluminumware and other household specialties which they are handling. They concentrate on the popular Viko line.

This catalog is most attractive in every way, well printed, on excellent paper and will doubtless be preserved for reference by the buyers in the territory in which the Murray Co. operate. They will be glad to send a copy to any of our readers upon request.

## If One-Half the Dealers Knew

The real facts of how they could supply a modern Spring Bar Bumper of double strength for EVERY car desired—front and rear,

**An Output Ten Times Larger**

Couldn't Fill the Demand.

## New Era "Better" Spring Bumper

is a positive evolution of merit in several points.

**Its Double Bars Mean Double Strength.**

Interchangeable for ALL cars by detachable arms, furnished for every car—front or REAR—and freely exchanged for any car desired.

The most complete catalog, showing arms for EVERY car—front and rear—will EARN HUNDREDS of dollars for any dealer. If your jobber won't furnish Spring Bar Bumpers with the name "New Era" and patent dates, between the double bars, ask us the name of nearest jobber. The catalog also shows "BETTER" Springs and Tire Carriers for all cars.

### "PYREXING A KITCHEN"

It is claimed by the manufacturers that very few articles are more natural "repeaters" than Pyrex—the transparent oven dishes. A Pyrex pie plate inevitably leads the customer to buy a Pyrex bread pan, custard dishes, layer-cake dish, beefsteak casserole, bean pot, utility roaster, individual baker—and a host of other necessary dishes. And so has come the phrase, "Pyrexing a Kitchen."

Merchandise that brings a customer back to the store every week or month for another article of the same make is practically certain turnover—the kind that can be estimated in advance.

There are really two kinds of repeaters. There is the kind of article whose sure breakage requires the periodic renewal of the same article. Then there is the kind of repeater which brings back the customer for more of the same class of article. You appreciate the difference.

Pyrex seems to be the kind that stands up under wear—and it has a family. The best repeater is the durable, guaranteed product that has a family.—A wife, parents, children, grandchildren, grandparents, uncles, aunts, nephews, nieces, cousins! The kind of product which says, "I am made in many forms for all uses. Get us all—one by one if you wish." The kind of product in which the customer meets the parents and wishes to meet the children—meets the uncles and wishes to meet the aunts—meets the cousins and wishes to meet the nephews and nieces.

For the merchant, Pyrex helps to establish that mountain of steady assets otherwise known as good will. The dealer in Pyrex will be known as the "Pyrex man" to hundreds of people for years after he retires from business—if he does.

"Pyrexing a kitchen" is more than a phrase. It means a multiplied customer. It makes one more than one—many times more. As an example of a repeat product it is superb. The merchant needs such repeaters in his business.

---

Davis & Fillpot have purchased the stock of Miller & Babbs at Stockton, Mo.

---

Taylor & Winslow are the purchasers of the business of Edwin Blackburn of Surprise, Nebraska.

---

The Srygley Hardware & Furniture Co. has been incorporated at Valliant, Oklahoma, with a capital stock of \$15,000.

---

The Nevins Hardware Co. at Ford, Kansas, purchased the stock of B. E. Henry of the same place, and the two business have been combined.

---

A new firm at Quinton, Oklahoma, is the Quinton Hardware Co. They will carry a full line of hardware, implements, household goods, as well as sporting goods.

---

The Crook French Hardware Co. has been incorporated at Durant, Oklahoma, with a capital stock of \$25,000. No ill omen is taken from the fact that three Crooks are the incorporators of the business.

---

G. A. Evans, a hardware pioneer at Beaver Crossing, Nebraska, has taken his son into the business and the firm will henceforth be known as G. A. Evans & Son. Electrical supplies have been added to the general hardware stock.

---

Rather a unique purchase for a hardware merchant was that of L. A. Love of the Sultan Furniture & Hardware Co., at Sultan, Wash., when he purchased the city park of his community. It seems that this property has been leased and used as a cow pasture. Mr. Love is reported to have bought the public playground for \$1,100.

### MORE ROOM FOR OHLEN-BISHOP SAWS

The Ohlen-Bishop Company—which is a merger of the old established firm of The James Ohlen & Sons Saw Mfg. Co., of Columbus, O., and The Geo. H. Bishop & Co., of Lawrenceburg, Ind.,—is erecting a large addition to its Columbus plant. The new building is of the saw-tooth type, of the most modern construction and when completed will be devoted to the fabrication of Hand Saws, Trowels and other products used in the hardware and building line. All of the machinery and equipment to be installed is being made in the company's own machine shops. It is expected that the new units will begin to produce about July first, and will result in nearly doubling the present capacity of the hardware division.

Columbus architects are now drawing plans for extensive additions to the Bishop plant at Lawrenceburg, and these plans and specifications will be offered to contractors about June first. The company's booked business indicates a constantly increasing demand for Ohlen and Bishop Saws and Tools, from both foreign and domestic buyers, and compels the management to double its manufacturing facilities.

### NEW FIELD FOR AVIS FLY TRAP

The Avis Hardware Company at Pomona, California, announces a new contract with the Swift Fly Swatter Company of Kansas City, Missouri, whereby Avis Sanitary Fly Trap will be manufactured and distributed throughout the United States on a scale far greater than has even been possible.

Distribution west of the Rocky Mountains will be continued by the Avis Hardware Company. The Swift Fly Swatter Company will take care of the trade east of the mountains and the Fly Trap is destined to be introduced to a far larger and keener demand than it has ever felt before. The initial device of the Avis trap as well as its steady growth and development is a personal tribute to the enterprise and inventive genius of A. B. Avis, who up to this time has been its sole distributor.

### BARR BROS.' NEW SALES MANAGER

Barr Bros. Co. of Oakland, California, pioneer cutlery and sacking needle manufacturers of the far West, immensely strengthened their organization when Fred H. Poss entered the firm as sales manager. With him in the enterprise in organizing a new sales policy to cover the United States, is J. B. Barlow.

Barr Bros. has developed a fine line of knives during many years of production. In addition to the knives the company has a sack needle line which is unique in the United States. At the present time the demand for sack needles is particularly keen, since the foreign supply has been cut off, and Barr Bros. find it difficult to supply the trade on the one item of needles, receiving orders from all sections.

It is the plan of Mr. Poss and his partner, Mr. Barlow, to develop the sack needle business first. A sales organization will be formed to cover the United States, and it is very probable that other needles will be added to the company's line, such as darning, knitting and crochet needles.

---

Another northwestern institution enjoying a new location with the advantages of increased space, is the Lentz Hardware Co., Yakima, Washington.

---

Herman Hurwitz of Seattle, owner of the Olympic Hardware Co., recently celebrated his twentieth business anniversary. It so happened that the drive for Armenian Relief Fund happened at the same time, and he announced for the Olympic Hardware Co. that 2 per cent of all purchases made during the week of the drive would be devoted to it. This only goes to show that progressive merchants can be public spirited citizens.

### NAIL BINS AS NEVER BEFORE

With nails almost in a class with potatoes and sugar as for price and supply in the hardware dealer's stock, the necessity for scientific storing of the nail stock and careful selling of nails has been brought home to the merchant. It is for this reason that the announcement of the Wellston Mfg. Co.'s Eclipse Nail Bins, elsewhere in this issue will be of particular interest and vital concern to the merchants of the West.

We have heard it rumored that many members of the trade have considered installing glass cases to display their nails and vaults in which to lock them at night. For those who are not able to do this, we would strongly recommend an investigation of the Wellston Eclipse Nail Bin. The Wellston Mfg. Co., is known to the trade and a pioneer along its line of manufacture, having specialized on the nail bins until they are standard. Each section of the improved model nail bin revolves separately and even when loaded to capacity the lightest touch will turn it in either direction on its ball bearing swivel.

The construction throughout is substantial and the finish attractive and complete. Each bin has a capacity of a keg. The bins may be secured with or without a lip. More than 5000 retailers all over the world are endorsers of the Eclipse Wellston bin.

In addition to the nail bins the Wellston Mfg. Co. makes bolt cases of various capacities and sub-divisions, also a screw and nut case and a general display stand. The company also maintains a service department for the aid of those whose needs require a departure from the regular line of devices.

Any merchant who needs metal furniture of a special nature as well as those interested in the Standard line of Eclipse bins can communicate with the Wellston Mfg. Co., Wellston, Ohio, or with the company's western representative, L. R. Smith, Santa Maria Building, San Francisco.

John Howitz & Son have succeeded E. C. Dedrick in the hardware business at Langdon, North Dakota.

### BENJAMIN 2-WAY PULL PLUG

Here is the Benjamin Company's latest contribution, the Benjamin Pull Plug. It is, of course, a development of the famous 92 two-way plug, which has been known for years wherever current is used. The pull chain mechanism controls one of the outlets which permits the lamp to be turned off. It has never been shown anywhere before, according to the manufacturers.

As a new and readily saleable item, the 2-way pull plug deserves the attention of the merchant whose electrical supply counter carries fixtures and specialties which sell on sight. The products of the Benjamin Electric Mfg. Co., are their own introduction and no further introduction and no further recommendation is necessary. The company's announcement of its No. 92 plug appears elsewhere in these pages.

### NEW STILETTO REPRESENTATIVE OVERSEAS

An almost completed rearrangement of its export and overseas force has been made by Baker, Hamilton & Pacific Co. E. R. Morgan has for many years represented Stiletto brand in China, Japan and Manila. During the last few months, Mr. Morgan has abandoned the rickshaw and is now travelling American roads. Taking Mr. Morgan's place in the Orient, G. P. Wolf from will sail this summer for a trip to last anywhere from a year to two years. The trip will not be a new one for Mr. Wolf from for he has made several trips to the Orient. In fact, he has just returned from a trip to Australia and the South Pacific.

Mr. Wolf from is an able salesman and one of those loyal employees whose success is founded on hard work and industry but who shrinks from any personal glorification or boasting about his achievement. Lester G. Melquino who has managed the export department for the house for some time has left for Australia and New Zealand to cover Mr. Wolf from's former territory.

It is with deep regret that the trade learns of the death of Harry H. Henoch, for ten years representative for the Auto Strop Safety Razor Co., in Michigan and Wisconsin. He has been a good friend to the trade, and a good salesman for his employers, and his loss is mutually mourned and keenly felt. While it is poor consolation at best, Mr. Henoch's family is fortunate in benefiting by the Group Insurance which the company has recently inaugurated.

The Eymann Hardware Co., of Parlier, California, in a general reorganization and enlargement announces a change in their name to the Eymann Suderman Hardware Co. A second store has been located at 734-44 J St., Fresno, Calif.

Hicks-Burton is a new firm at Wiggins, Colorado. They will carry a full line of Ford parts and accessories, and will do repairing on all makes of cars.

Dean H. Davis has become a member of the firm of G. C. Davis & Sons at Chanute, Kansas. This is a pioneer institution of the locality, having been established since 1874.

### MABEL HENNESSY JOINS WINCHESTER STAFF

After six years of experience as advertising manager for the Bunting Hardware Co., Kansas City, during which time she has established a national reputation for her writings for hardware publications on hardware and household goods from the unique standpoint of a woman consumer, Mabel Hennessy has joined the advertising staff of the Winchester Repeating Arms Co., of New Haven, Conn.

Miss Hennessy has become, through her long experience and her definite study of household hardware from the woman's viewpoint, an expert in her knowledge of such articles and the relation of the woman buyer to them. In her new position she will bring the benefit of this experience to bear on the work of the Winchester Plant in bringing its household hardware products before the women of the country and in making the new Winchester stores the attractive hardware buying establishments for women.

Not unlike many other persons who have achieved high success in the advertising field, Miss Hennessy broke into this line of work because of a major ambition to write. The first symptoms of this ambition developed in her school days when Miss Hennessy's essays were the model of her schoolmates. After completing her school work, Miss Hennessy applied for a place on the advertising staff of the Bunting Hardware store of Kansas City on the platform: "I want a place where I can write for women."

She has since developed into a skilled writer of advertising and an enthusiastic student of the articles of hardware offered for household purposes, the special points that made certain articles particularly useful to the women of the home, the details in which they helped the woman in her work and their feminine appeal. She has also written articles for the trade papers on household hardware from the woman consumer's point of view, interesting articles about refrigerators, electric washers, the advantages of long handled cutlery in the kitchen so that she soon became known as probably the most widely known and quoted woman in the hardware trade in the middle west.

Of her work along this line, Miss Hennessy says:

"I saw that labor saving devices must do the work of two people in one pair of hands. I studied a woman's day from daylight till dark. Mentally I have kept house a thousand years if you count the

number of times I have thought over the routine of housework and fitted labor saving utensils into one pair of hands. Because I am a woman I know that an awkward knife or bungling egg whip can jangle nerves into domestic discord. I have studied advertising from the consumer's side first and worked back to the wholesale interests."

Miss Hennessy knows women and their household problems and she plans to continue to assist them to solve them on a larger scale than ever and to help the Winchester stores to solve them in a big way.

### NAPIER SAW MAKERS CONCENTRATING

News of what is both a combination and a separation but which will tend to strengthen the product as well as the organization, of two of the largest saw manufacturers in the United States, comes to the trade with the announcement that the Napier Saw Works, Inc., has been reorganized and that henceforth the manufacture and sale of hack saws will be separated from the band saws and metal cutting machines.

Napier Expert and Napier Quality hack saws have grown in volume and quality and popularity so fast that it is necessary to concentrate on one line alone. Henceforth the hack saw business will be conducted by a new and un-named company under the able leadership of A. C. Whitefield, sales manager of Napier Saw Works, Inc. Headquarters of the new consolidation will be in New York and a new factory will be built at Springfield, which will combine the plants of the hack saw department of the Napier Saw Works and the Victor Saw Works, which has been combined with the Napier organization.

The output of Napier Saws has for some time been the second largest in the United States, and with the new consolidation and reorganization, the largest hack saw works in the world will be organized. For the time being, Victor saws will probably be handled by the old Victor Sales organization and the Napier Saw organization will handle both the cutting machines, band saws and hack saws. It is probable that as time goes on, the line of cleavage will become more and more distinct, and two great industries will grow where only one has been before.

### KRAKAUER-ZORK CO. AT PHOENIX, ARIZ.

Recognizing the great opportunities at Phoenix and the Salt River Valley as a point of distribution in the western territory, the Krakauer Company of El Paso, Texas, has opened a warehouse at Phoenix. The Phoenix branch will be under the management of C. W. Fulkerson, who also has charge of the Southern Border Motor Company's business in the Arizona territory. The Motor Company is an affiliated interest with Krakauer-Zork Co. Heavy hardware, Krakauer-Zork machinery and the Stover gas engines will be particularly handled from the Phoenix warehouse.

F. W. McCracken has purchased the Kerr Hardware Company at Patterson, California, and he will conduct the business along the same lines that have made it successful in the past.

### SPOKANE PIONEER PASSES

The death of Will H. Ziegler at Spokane, Washington, last month deprives the trade of one of its early pioneers. Mr. Ziegler was a native of Chenoa, Illinois, and at the age of sixteen came in 1879 to Spokane Falls and entered the hardware business with his father, Louis W. Ziegler. A branch store was opened at Medical Lake and was operated there under the name of Ziegler & Son until 1884. Will Ziegler then came to Spokane and managed the main store until the fire of 1889 wiped out the business. Since that time Mr. Ziegler was connected with real estate and political affairs. He leaves an estate of \$400,000 to his wife.

## STANDARDIZING CLEANING CLOTHS

The production of cleaning cloths on a basis of uniform quality and complete standardization of all factors entering into the product is the latest venture of the Royal Manufacturing Company, manufacturers of the widely advertised Royal Cotton and Wool Waste.

Standardization in this field, according to the Royal organization, must begin with the raw material, which in the past has shown a tendency to diverge widely from anything like uniformity of quality and from materials procured from standard sources selected for the required quality and kind of cloths they produce.

Royal Cleaning Cloths are guaranteed to be thoroughly laundered, completely sterilized and dried before shipment. Through standard processes and equipment the finished article is warranted to run true to sample in every particular.

The bale made famous in the case of Royal Cotton Waste will now enter the cleaning cloth field. Shipments will be made in bales of light clean burlap with new steel bands. Weight will be guaranteed even as ordered, thus obviating the "padding" evil. "Tare" (Wrappings) is guaranteed not to exceed 6 per cent of total weight.

There will be four standard grades of Royal Cleaning Cloths: All-White, Colored, Near-White and Hosiery. These may be ordered from the Royal Cleaning Cloths Sampling Folder, which may be had upon request of the Royal Manufacturing Company, Rahway, N. J.

## CONVINCING STANLEY SALES LITERATURE

There are few manufacturers in the hardware field who take more pains and more justifiable pride in their sales literature and helps than do the Stanley Works. Just this month, two new additions to the great volume of beautifully published material describing Stanley Products have been added.

There is a twenty-four page beautifully published description of Stanley specially designed garage hardware. Each page is beautifully tinted and decorated, and the specifications are suggestively arranged among the pictures of model installations. The book is bound in a gray three color cover, which makes the whole typical of the products which are described therein. It reaches the very height of the printer's art in picturing and describing the last word in garage hardware.

"Use Stanley Works Ball Bearing Butts for Permanence," says another Stanley booklet. It goes on to describe the various types of ball-bearing butts manufactured by the Stanley Works. Each item is pictured in its natural brass color and with an accuracy that fits the description on the opposite page. In the double page center of the booklet, a butt is analyzed for its points of superiority and sales features. No merchant handling Stanley garage or builders' hardware should miss either of these booklets. They should also be in the hands of all contractor and architect customers.

The Flanery Hardware Company has come into being at Warrensburg, Missouri, having succeeded I. D. Garner & Sons. They will specialize on auto accessories and general hardware.

The Kennewick Hardware Company of Kennewick, Washington, reports that "business is fine." They are adding extra men to the force, and the outlook for the coming season is most encouraging.

The firm of Dyer & Botsford at Granger, Washington, has become Dyer & Company with the withdrawal of W. J. Botsford to represent the Yakima Hardware Company at Walla Walla, Washington. Mr. Dyer will conduct the business, handling hardware, furniture and implements.

## What's In a Name

Enough—plenty — SUCCESS in the RIGHT ONE properly applied. It's half the game, naturally, you don't get a good one with poor merchandise, unprincipled methods nor disregard for rendering distinctive and valuable service. Establish a meritorious name, it compares with a solidly laid rail system that has demonstrated "delivered" ability, preciseness and certainty, when the charges are fair the public uses the road over and over again, even if the cars are changed in color, the conductor's uniform from blue to gray or electricity replacing steam.

"Good Morning" (It's me they're talking about)

Evidence galore, Brunswick Balke (Pool Table Mfgs.) undeniable success producing talking machines and automobile tires. Do you think the name helped any?

Heinz put over 57 and more varieties. We contend first one was hardest, name helped others along materially.

Chandler Motor Car Company identified with Cleveland Motor Car Company. Chandler a success, Cleveland unknown, BUT, public had sufficient confidence in connection that 25,000 Cleveland cars sold before one was shown.

Think of it. Standard Oil put over mild laxative (Nujol), really there is a contrast between Kerosene Stove (Perfection) and body lubricant.

"WHERE DO I COME IN?" asks the above member of the Gem Brush family. HERE AND NOW.

"On and above the fact that GEM BRUSHES possess one hundred cents of utility for every dollar expended, pay legitimate wholesome profits to everyone handling them and guaranteed throughout, comes the burning truth that the name G-E-M, connected with shaving things particularly, spells SUCCESS from every stand-point necessary and essential. GEM BRUSHES represent new car developed with all knowledge possessed up to 1920 and now placed on that solid Gem System, which is BUYING POWER, they will ride forth with confidence of our trade to reach all points which is ULTIMATE CONSUMER via stations called DEALERS, through the transfer points called JOBBERS. Ring the bell and go ahead, you have the goods.

We all went to the top with Gem Razors and Blades because they are chocked full of quality, usefulness and results, they survived and succeeded because GEM exceeded everything in its class, stepped into another one of its own, very true, that is going to continue, also prevail in GEM BRUSHES.

Their name is 50 per cent at least of their selling power. If we put lake water in bottle labeled Gem Hair Remover, large quantities would be sold, but, eventually get knocked off the market; nevertheless, we'd sell a lot of it. GEM BRUSHES not only will sell on account of name, but, be backed up in use with real quality and service.

GEM BRUSHES will be advertised in magazines and through other channels all year around.

Don't lose sight of the fact that GEM BRUSHES are in a class alone, GEM BRUSHES are manufactured to sell no cheaper than good brushes can be produced.

GEM BRUSHES is all knowledge of Brush Manufacturing experts thrown together, divided with essential factors and the results GEM BRUSHES.

(Signed) THE GEM SAFETY RAZOR CORPORATION.

# Plumbing and Heating

## PLUMBER SHOULD CULTIVATE THE FARMER

Did you ever stop to think what a wonderful opportunity there is for you in the personality of the farmer? A certain mail-order house in the west turned a neat billion dollars last year—and most of it came from the jeans of the farmer. Are you—the plumbing and heating expert—getting any of this rural business? And why not? asks John A. Lutz.

As a home-loving man the farmer is conscientiously interested in his home and all those things that go to give it a modern, comfortable atmosphere. The farmer is no longer the rube pictured some years back in the comics. He is a progressive, down-to-the-minute business man that wants everything his city brother has—and he gets it!

### Try These Suggestions

Let me suggest a method for the plumber to reap his share of the business actually waiting for the first comer: First of all you are to go to a printer that knows something about style in letterheads. Have him design and print for you some business stationery that will impress the farmer as soon as he sees it—that will tell him at the first glance that here is a man that is a modern business man; a letterhead that will express the high quality work you do. In a word, a highgrade piece of business stationery.

Next get a list of the worth-while farmers in the communities within a radius of your own establishment (twenty-five miles, forty miles or whatever distance you wish). This list can be had from various sources. You can buy one from those concerns which make a business of compiling lists of all kinds, you can build your own list from the telephone books of the communities you intend to reach out for, or you can place small advertisements in the local papers—not to sell anything by these advertisements, but simply stating that if the farmer will drop you a card, he will receive a valuable booklet or some such leader to get his name.

Then when these names are procured, send out to them the booklet promised. Make this booklet something that the farmer will read and keep. This can be easily done and at the same time have considerable sales value for you. I would get up this booklet something

after this fashion: I would first of all make it attractive physically—the printing, the paper, the illustrations. Then I would put into it those things that are a part of the farmer's daily life—information about soils, about planting, caring for his horses and cows, and for his motor car (for rest assured he has one!) Then I would tell him all about what I had to sell him—not about the things themselves so much, mind you, but about the service those things will give him. Put the human element into the sales talk. For instance, what I mean by the human element is this: When you are selling him a running water system don't try to sell him the system as a modern household necessity, but bring the idea right home to him by suggesting how delightfully refreshing, after a hot day in the fields, to come into the house and duck under a cooling shower. Then go ahead and tell him that you have a very reliable shower attachment which you can strongly recommend as best suited to his needs; describe it fully, and show it attached—with someone taking a shower under it if possible. This is the sort of sales talk that actually sells and gets across.

Then you should not stop with one appeal. If you do not make a sale or get at least interest from the first letter or folder (and I am strong for folders after many years' experience in the advertising profession), follow up with another appeal—but link it up in some way with the first.

The matter of the letter—whether that be on a letterhead or incorporated in the folder—is most important. So many people—even those who, from experience should know better—utterly fail when it comes to writing letters. I have known the best salesmen in their line completely fall down when they tried to put their sales talk on paper. Why is this? Simply because they at once become conscious; the matter of selling is no longer natural. It has become strained, an effort; it lacks the free, easy flow of the sure salesman. And, so it at once loses the "that" which we, in the language of the street, call "pep."

### Write As You Talk

The best sales letter is that which accurately records what would be the language of

*The Trimo Chain Pipe Wrench*  
*The Trimo Monkey Wrench*  
*The Trimo Pipe Cutter (Hand)*

The four good points that make the Trimo Pipe Wrench superior are the **Spiral Spring**, always in place, the **Steel Frame**, that will not break, the **Nut Guards** that protect adjustment nut—and the **Inserted Jaw** in handle, that can be replaced when worn. **Save time and money and buy Trimo tools, made by**

**TRIMONT MFG. COMPANY**

ROXBURY (BOSTON), MASS.

the personal salesman. If you are not used to writing sales letters I would strongly urge that you employ someone expert in this line, because the small charge will be more than counterbalanced by the returns in dollars and cents from the pulling power of the expert letter.

I am firmly convinced that the plumbing and heating trades are missing a most promising field in the farmer. Understand, advertising—good advertising—is not alone intended to sell the man who already wants what you may have for sale, but advertising has a wider purpose: Advertising is intended to create a desire for the thing advertised and then to make that desire so strong that it is acted upon and the article purchased. Therefore it seems to me that there is a great future for the aggressive plumbing and heating specialist who will see this field, organize a small mail-order department in his business, and go after this rural trade. The outlay is insignificant and the returns are certain if the proper methods are pursued and the proper kind of advertising is prepared by one who knows this special branch of selling.

#### NORTHWEST PLUMBERS IN CONVENTION

We go to press too early with this issue to report in detail the interesting features of the Oregon Master Plumbers Association, which convened last month in Salem. All the Washington plumbers gathered for their annual meeting at Bellingham.

Both of these conventions were well attended, the plumbers, their wives and families visiting both Salem and Bellingham in goodly numbers. An interesting program had been prepared by their officers and the business sessions were particularly interesting and helpful.

During the evening the local merchants provided ample entertainment for their visiting guests. A feature of the Oregon Convention was that they were met with a brass band, escorted in an automobile parade into Salem and welcomed by the city officials.

We shall have more to say of these interesting conventions in our next issue.

#### WHY HE DEMANDS CASH PAYMENT

A middle western merchant gives these reasons for doing a strictly cash business:

A book account represents money lent without interest or security.

Book accounts don't pay bills or buy new goods.

"I will pay tomorrow" means next week, next month, next year or never.

Cash in hand is worth two on the book.

With cash in hand you can stock your shelves and discount your bills.

The more business you do at less-than-a-living profit, the worse you are off.

The more you trust out the more you have to charge your customers.

Cash sales refill your shelves. Book accounts empty them and curtail your business.

Cash sales take less capital, less bookkeeping and make more profit.

You can afford to do a cash business if you don't do half as much.

Your book accounts are cash invested that is not earning you a living.

Ed Hovey and Frank Leis have combined in a plumbing partnership at Larkspur, California.

Ted Maughan is comfortably situated in a new location at Bonners Ferry, Idaho. The building has been remodeled and repaired, and is now admirably situated for the Maughan plumbing business.

R. F. Carter has purchased the plumbing and sheet metal department of the Jesse C. Brown business at Reedley, California. Mr. Carter is an accomplished and experienced plumber and is in position to render real service to his community.

A. McDaniel has opened a branch plumbing supply business at 4228 14th Street, Northeast, Seattle. Mr. McDaniel formerly was proprietor of a retail plumbing shop in the same district, and he will now cater to local plumbers and supply necessities in their line, cooperating with the P. E. Palmer Co.

L. M. Waddell, who has been a favored plumber at Elsinore, California, for two years, now has his own business at that place, and is fully equipped with a full line of plumbing supplies and fixtures.

# Let Us Have Gardens

(By Harry Gale Nye)

We (speaking editorially and not meaning necessarily anybody but ourselves) are heartily in favor of the garden movement—not Mary, but vegetable.

Spring is now here, and that is why we here spring it. During the world war, you will remember, we had war gardens in the United States; but why not now?

Peace hath her vegetables no less renowned than war, and so I, I mean we, are for gardens first, last and all the time.

## Why Called War Gardens

Many persons were of the mistaken idea that the war gardens were called war gardens because they brought war into so many happy homes. There was more or less argument regarding who should weed the onions and sprinkle the tomatoes and pluck the bountiful potato bugs from the potato bushes. But that was not the real reason why they were called war gardens, although that was reason enough.

It was because they helped to win the war. Well, now the war is over and we have different times. The war was terrible, but now we have peace, which some folks say is even worse. Of course, they are only fooling. Peace is not a thousandth time as bad as war—but it seems to be just about as expensive.

But the war garden is one thing that might well be perpetuated in these piping times of peace—in fact, ought to be, because of the high cost of living. Let every man who owns a plot of ground or who can borrow one from his neighbor, plant it to vegetables of the most popular brands, or species, or whatever you call it. Remember how the universal planting of cabbage in 1918 reduced the price nearly half of one per cent? Let us do it again, and pass the cold shaw to the high cost of eating.

## Eating Our Most Expensive Amusement

This thing, eating, has become our most expensive amusement, and if gardens or anything else will help us to cut down the cost or cut the habit, we all ought to be for it good and strong. I remember when I was a boy—I mean we remember when we were a boy—being handed a quarter when we had to stay downtown for lunch, and we not only got the lunch for a quarter, but were able to hold out enough to wind up with a soda and a sack of peanuts. But now-a-days a man with a quarter in his pocket is on the verge of starvation. A quarter used to go pretty far in those days, but now it can't get to the corner.

But, if we will only plant gardens, it won't matter whether a man has a quarter or not.

All he will have to do is to jump over the fence into somebody's garden and get a mess of vegetables and beat it for home. His wife can cook them up into a nice little supper as soon as she comes in from work.

One thing is sure: The plumbers ought to be in favor of war gardens. The garden will have to have water (just the same as the whole country has to have it now), and the first man they will send for to do the piping will be the plumber. This is what is meant by "the piping times of peace," and the plumber ought not to complain about the horrors of peace as long as he is the man who is called upon to do the piping.

And, if the plumber is a really progressive merchant, and has read all the helpful hints that we and other experts have given him on salesmanship and creating the desire and all that sort of thing, he might be able to persuade some householder to pipe his garden for gas, so that the stuff will grow nights after the sun goes down. Oh, there isn't any doubt the possibilities of the thing are great.

And the hardware man and the drygoodsman, both of whom sell hose that will be displayed more or less in the garden, will follow right along and put another wiggle on the garden movement. So let us have gardens in both peace and war. It is true that the war is over, but another election is coming along and heaven knows what may happen to us yet.

But one thing is surer even than any of the sure things above; whether the garden reduces the high cost of spinach or not, it will do this for the gardener any way: It will get him outdoors and fill his lungs full of air and his hair full of sand, put the bloom in his cheeks instead of in his nose, and be an all-around help to him. That is what we started out to say in the first place, but if we had we would not have had the chance to say all these other things.

The war garden may not bother the greengrocer much, but it is an awful aim at the doctor, and, if generally encouraged, will put him out of the 8 per cent class and back into the 4 per cent class when March 15th rolls around next year.

## THRIFT

If you want to know whether you are destined to be a success or not, you can easily find out.

The test is simple and is infallible. Are you able to save money? If not, drop out. You will lose.

You may think not, but you will lose as sure as fate, for the seed of success is not in you.

Make suggestion. Everything begins with thought.

The burner is made of special generator metal; the tank of heavy gauge, seamless, drawn brass, re-inforced. The No. 32 will outlast several of ordinary make. All leading Jobbers supply at factory price. Send for catalog.

**CLAYTON & LAMBERT MFG. CO.,** Detroit, Mich., U. S. A.

**BEWARE THE FORGOTTEN CHARGES!**

Do you know that failure to charge goods sold on credit is the cause of heavy losses to a great many merchants?

There is no good reason why this should be either, because merchandise on a shelf represents just as much value as the currency that rests in the cash drawer.

It would be a careless merchant who handed out \$20 bills and then forgot all about the transaction a few minutes later. But there are careless sales persons today who do that very thing with the stock they are responsible for—pass it over the counter and then forget to charge for it, as if it had no value whatever! Merchandise represents the merchant's capital—his money, in other words.

**Your Goods Are Your Capital**

And if someone gets any part of it without returning a just equivalent, that capital is impaired to the extent of the value of the goods.

When the merchant and his entire selling force realize that merchandise is just the same as cash, then all will begin to believe it is no more foolhardy to pass out \$20 bills for nothing, than it is to sell goods on credit and then forget to make the proper charge.

The merchant with the right kind of store and bookkeeping methods, never would have a chance to forget a charge account no matter how small it might be. There always would be some sort of record, the sales slips for instance, to remind him that such a transaction had been made.

**WORK**

I am the foundation of all business. I am the fount of all prosperity. I am the parent of genius. I am the salt that gives life its savor. I have laid the foundation of every fortune in America, from Rockefeller's down. I must be loved before I can bestow my greatest blessings and achieve my greatest ends. Loved, I make life sweet and purposeful and fruitful. I can do more to advance a youth than his own parents, be they ever so rich. Fools hate me; wise men love me. I am represented in every sheet of paper that goes out of the mill, in every train that crosses the continent, in every newspaper that comes from the press. I am the mother of democracy. All progress springs from me. Who am I? What am I? I am Work.

The best thing about co-operation is that it does not hurt anyone—we all win by it.

"I shall have to study three years to be admitted to the bar," said the young man with large spectacles.

"Taint worth it," commented Uncle Bill Bottletop after some thought. "I'd rather go without the drink."

**DO YOU WANT A RAISE?**

The only way to get it is to make yourself worth more to the man who pays you.

Too many salesmen are always trying to curry favor with the boss. Their department of the business goes dead. Let the boss alone. Curry favor and serve the consumer, your customer. The boss always respects a salesman who gets the business at a profit; and the consumer likes the salesman who knows his business from A to izzard and delivers not only the goods but service as well. One can make himself worth while to his employer and the world in general by using his ability in the most effective manner.

Do something. Deliver the goods. Produce.

Air castles of a bachelor are usually constructed of smoke.

T. W. Scott has opened a plumbing and tinning shop at Silver City, New Mexico.

Peter H. Breuss, long established hardware and plumbing merchant at Pleasanton, California, is branching out by adding an electrical supply and contracting line to his business. Sheet metal work including irrigation installation is also handled by Mr. Breuss.

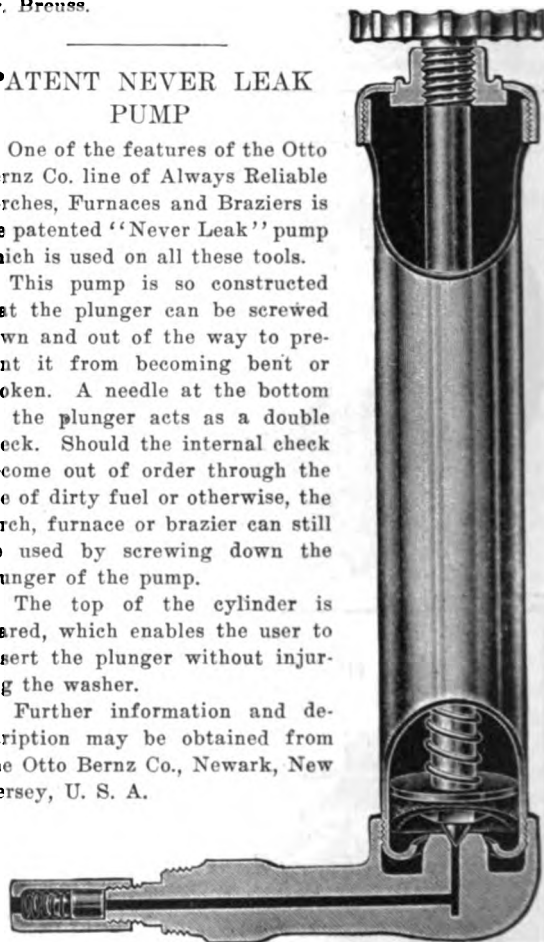

**PATENT NEVER LEAK PUMP**

One of the features of the Otto Bernz Co. line of Always Reliable Torches, Furnaces and Braziers is the patented "Never Leak" pump which is used on all these tools.

This pump is so constructed that the plunger can be screwed down and out of the way to prevent it from becoming bent or broken. A needle at the bottom of the plunger acts as a double check. Should the internal check become out of order through the use of dirty fuel or otherwise, the torch, furnace or brazier can still be used by screwing down the plunger of the pump.

The top of the cylinder is flared, which enables the user to insert the plunger without injuring the washer.

Further information and description may be obtained from the Otto Bernz Co., Newark, New Jersey, U. S. A.

## WHEN GOING INTO A DEAL YOU'RE PARTICULAR ABOUT, BE SURE YOU ARE TOGETHER

(Copyright by Elton J. Buckley)

Some time ago I wrote an article on "What Comes of Leaving a Deal Half Made." The question raised by the following letter also concerns the proper way to put through a deal, but a different phase of it than discussed in the former article:

Paterson, N. J.

During last month a jobber in New York thought he was overstocked with \_\_\_\_\_ and sent out letters to a number of customers offering blocks of them at about 10 per cent below the best price we could get anywhere else. The terms were: Orders to be in by a certain date, not to be less than 25 cases, immediate shipment, absolute cash on delivery. The buy looked good to me, and I sent in an order for 100 cases. As I have a good credit rating, I did not think it fair for him to insist on cash on delivery; thought regular net cash in ten days was fairer, so when I sent in my order I wrote as follows: "Enter my order 100 cases \_\_\_\_\_ as per yours of the 21st. I agree to all terms set forth, but must have regular net cash terms ten days. See Dun and Bradstreet. Will send shipping instructions tomorrow." No acknowledgment was ever received from this letter. Two days after the New York house sent out this offer, the market took a leap up, due to big orders being received from Europe or England, and now the New York man refuses to fill my order, claiming that I never accepted the offer, and they paid no attention to my letter, as they had sold all they wanted to. The market is up about a dollar a case and is going higher. Can I force this house to fill the order?

M. R. T.

You cannot, for the very good reason that there was no order. This case is a very clear illustration of the legal maximum that before there can be a contract for anything there must be "a meeting of minds." Both parties must come together at every point, and then there is a contract or an order, as the case may be. As a leading case put it, "an acceptance, to be effective, must be identical with the offer, and unconditional."

It is all very well to dicker over these things, and to try to get all the modification from the original terms you can, but remember that all that time nothing is closed, suddenly something may happen which may make the other man unwilling to deal, and presto, he is off the string. This always occurs with deals you are specially anxious to put through.

I remember no better example of this than the case submitted above. The seller said I will sell you such and such a thing on certain terms, among which terms is spot cash on delivery. The buyer said I won't buy on those terms, but I will buy on regular net cash in ten days. That was not an acceptance; it was merely a counter offer, which was not accepted and so never got anywhere. There was no deal, in other words.

I remember another case somewhat similar in which the offer to sell was also for "cash on delivery." The prospective buyer wired back,

"Will take the goods; commence loading Monday, will weigh and settle promptly." The seller didn't ship and the buyer sued for damages, but the court said: "You didn't accept the offer, which was to sell for cash on delivery." Agreeing to "settle promptly" is not agreeing to pay cash on delivery.

The only way you can safely stand out for anything different than what is stipulated in the offer is to accept the offer as made, without qualification, and then express a hope that the seller may be able to do a little better for you in certain items. That doesn't make the acceptance invalid. For instance, a buyer in one case wrote, "I accept your terms, but hope you can see your way clear, when the time comes, to give me a little more time." Here the market advanced, and the seller tried to squeeze out on the ground that there had been no acceptance. The court, however, said there was; the expression of a hope for better terms did not qualify the agreement in any way.

Still another case that comes to my mind illustrates the point in still another way. A buyer of seeds made an offer on 350 bags. The seller accepted, but said he had only 251 bags. The deal never got anywhere, but finally found its way into the court, which was called upon to say whether there had ever been a real deal. The court said there had not been—an offer to buy 350 bags was not met by an agreement to sell 251.

## BUILDING FOR THE BETTER JOB

Success is just as easy as failure.

Working into the big job is just as easy as staying in the small job.

But it requires a man with vision; a man with imagination; a man who can see the possibilities in his work, and who is willing to develop himself so that he can develop his job; a man who is willing to pay the price by putting in overtime study that he may know all there is to know about his work.

To such a man the bigger job is always calling, always waiting. Whether we stay in the small job or make it a big one is right up to us, right up to you and me.

## EXTRACTS FOR A MODERN WILL

To My Beloved—I leave my house with its first and second mortgages.

To My Beloved—I leave my automobile and the privilege of making the rest of the "easy payments."

To My Dear—I give and bequeath my player-piano, on which there is only a matter of \$220 more to pay.—Judge.

## KEEPING FIT

To be fit is to be sound—physically, mentally, morally, is to be educated and trained for strenuous, worthy endeavor, it is to possess the self-controlling and self-directing power that makes for industrial, financial, social success.

Keep yourself clean—inside and outside; exercise your muscles, your mind, and your morals; live in the open all you can—literally and figuratively speaking; walk erect and breath deep; and play; read good books and periodicals and choose clean and intelligent associates; practice self-denial and human helpfulness; do a little good every day—and expect and plan to do more on the morrow; do your full share of the lifting—no matter who does the grunting.

## And Remember:

What you get out of any school or college will depend mostly upon what you desire to get out of it. A loud suit of clothes won't help the world to hear from you later; a calabash pipe will strengthen your breath—but it won't strengthen your brain; a cigarette won't serve as a skeleton key to unlock the door of success; athletic sports are all right, pursued to a sane extent—but athletic lingo isn't the language of the rostrum or the forum, the busy mart or open road.

What you get out of your position will depend largely upon what you put into it. Courtesy, industry, loyalty, economy—will all help you. A clock will do some good; but let it tell you when to retire as well as tell you when to rise. A night out with the boys means a day of loss to your employer. He owes you a salary; you owe him value received. Lolling over a billiard table won't limber you up for your duties next morning; draw poker won't teach you how to draw checks on your own bank account; seeing your reflection in the mirror of a popular cafe won't help you to see yourself in a better position, at the end of the year.

Many a charitable woman allows her husband to have her own way.

## PRICE PEAK APPARENTLY IN SIGHT

The business summary of the Federal Reserve Board, which is based upon reports from nation-wide sources, indicates a general belief among manufacturer and bankers that the post-war period of "extravagance and reckless buying" is near its culmination.

A "hesitation, if not an actual recession," of prices is noted, and the Federal Reserve Board's statement summarizes its advices as indicating a generally more hopeful view of the country's business condition than for several months.

While the price changes are shown by the Board not to be universal, they are, nevertheless, regarded as positive and of importance as a basis for reckoning what the immediate future holds.

Relief from the high prices for the consumer will not be completely obtained until present stocks are absorbed in practically all lines. Manufacturers everywhere, however, were shown to hold the view that the peak of high prices has been reached and to expect a gradual recession.

In the clothing trade, particularly, the Board said there was a marked tendency of the public to make old supplies last longer and to refuse to pay exorbitant prices. This phase can mean only that an awakening has come, the statement said, and that many people have arrived at the conclusion that they are themselves responsible for a continuing high range of prices.

## JAPANESE CATALOG STARTS AT THE BACK

An interesting side light on the development of foreign markets, by progressive American manufacturers is furnished by a catalog, issued by the General Commercial Company, Ltd., Yokohama, Japanese agents of the Wright Manufacturing Company of Lisbon, Ohio. Their product consists of hoists only, and the catalog in question is printed in Japanese. Mr. Wright is authority for the statement that in foreign countries there is a distinct tendency to favor those American manufacturers who specialize in one product.

The catalog presents an odd appearance with the title page at the back, and the vertical columns of hieroglyphics. The catalogs are, of course, intended for distribution in the Japanese Empire.

### 300 EMPLOYEES SAVE \$200 A WEEK

Increased production is a goal sought by every manufacturer and merchant throughout America. It is fully realized that only through increased production can the gap between demand and supply be filled and the financial and economic conditions of the nation be returned to normal. Businessmen therefore agree that anything tending toward increased production is good business for business.

L. L. Woodward, president of Fitzgibbon & Crisp, of Trenton, N. J., has this to say regarding the value of thrift, saving and safe investment in government securities as an aid to increased production:

"You may be interested in the success of the Government Savings Society as installed in our plant by Mr. Harrison in December, 1919. The educational work or Thrift plan as outlined in the 'Get the Habit' letters which we put into the pay envelopes of our 300 employes, proved a stepping stone for weekly savings in Thrift and Savings Stamps averaging \$200 a week with the shop foremen as order takers.

"We are continuing the interest by using the pay envelope 'Work and Save' inserts and believe that the results already attained justify the encouragement of the plan as good business from the employer's standpoint. Our experience has been that the majority of the employes now desire to work harder that they may earn more in order to save in Government Stamps where their money is safe and secure against depreciation and all this reacts to the benefit of increased production.

"We look for even more savers in 1920 amongst our employes now that the bond payments are winding up. We have gone into this thrift plan for all we can get out of it and have made it a study."

The old saying that "talk is cheap," is extremely misleading. Talk is cheap only when it amounts to enough to stir ideas which resolve themselves into valuable action. All other talk is a mere waste of breath and time.

# Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.
